The STUDY *of* LAW

A "Must" for the ambitious man seeking Business Success!

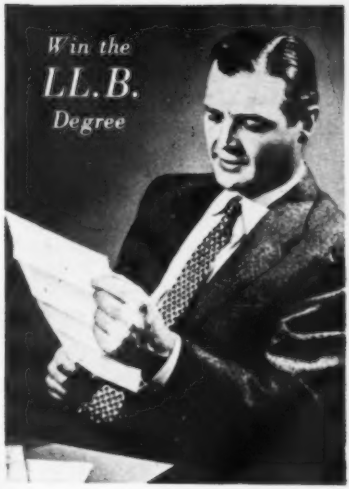
... Can YOU answer these legal problems?

CASE #1 **Jones wrote Smith making an offer. Smith wrote his acceptance and mailed it. Then he decided to call it off and telegraphed Jones to that effect. Jones got the telegram before he did the letter. May he hold Smith to the contract?**

ANSWER. Yes. Both Smith and Jones became bound when the letter containing the acceptance was mailed.

CASE #2 **Doe said to Crane, "I will sell you 100 shares of XY stock at $50." Crane said, "I'll give you $45." Doe, knowing the market was unsettled, said nothing, but an hour later tendered 100 shares and a bill for $4,500. May he hold Crane?**

ANSWER. No. Crane's counter-offer was a rejection of Doe's offer.



Law . . . A FASCINATING STUDY AND A LIBERAL EDUCATION

Law today is involved in practically everything we do—regardless of what our position or status in life may be. That's why thousands of ambitious men and women who never intend to practice are studying Law with LaSalle in spare time—not for a legal career but as an aid to business advancement.

Whether your work is related to banking, insurance, advertising, credit or collections, transportation, accounting, claim adjusting, merchandising, store proprietorship, partnership, brokerage, manufacturing—ANY FIELD—you need to understand and know Law.

The study of Law is a great help to men in every walk of life. Many physicians, clergymen, and other professional men are now studying Law with LaSalle as a matter of recreation, mental training, culture, as a necessary part of a liberal education.

Aside from the actual knowledge that you acquire, the reading of Law is conceded to be a superior developer of reasoning power. For all types of work, Law training develops keen, clear, quick, correct and decisive thinking. Reading a Law text is much more interesting to most people than a fiction story—you'll be learning the underlying principles of man's relation to society, his rights, privileges, and restrictions toward himself and his fellow man.

STUDY AT HOME—IN SPARE TIME

You can study American Law and Procedure right in your own home—advancing at your own pace. For over 50 years we have helped more than 1,400,000 ambitious men and women to greater success in the business world. You too can benefit, as have so many before you. Low cost—easy terms.

The training includes the 14-volume LaSalle Law Library—American Law and Procedure. This library has been compiled by leaders in the field of Law. It covers the whole basic field of Law in an orderly and easily understood manner that can be quickly learned. Collateral reading and printed lectures on legal problems supplement the text. Law instructors who are licensed attorneys personally supervise your program from the first assignment to the LL.B. Degree or Diploma.

SEND FOR TWO FREE BOOKS, "LAW TRAINING FOR LEADERSHIP" and "EVIDENCE"

If you are determined to enjoy the advantages of Law training—to prepare for greater future possibilities—send the coupon and get all the facts. The interesting and informative booklets, "Law Training for Leadership" and "Evidence" will be sent promptly, and without obligation. MAIL THE COUPON TODAY!

MEMORY UNLIMITED

I JUMPED into the first railway compartment which seemed empty: my eyes fell on a book left on the seat opposite by a previous passenger.

I took it up absent-mindedly and ran through the first lines. Five minutes later I was reading it as eagerly as a clue to a hidden treasure. I learned that everyone's memory is capable of fantastic feats; that an ordinary person if he has taught himself to control the way in which his brain stores impressions can memorize accurately long and complicated lists of facts after reading them over only once or twice. I thought I would test the truth of the statement.

I took a timetable out of my suitcase and began reading quietly in the manner prescribed, the names of about one hundred railway stations. I observed that, after reading them over a few times, I could recite the whole list off with hardly a mistake. With a little more practice I found I had committed them so completely to memory that I could remember them in the reverse order and even pick out one station from the list and say which number it was, and what were the names of the towns before and after it.

I was astonished at the memory I had acquired and spent the rest of my journey on more and more difficult experiments in memory, and reflecting how this new control I was achieving over my mind would materially help me to a greater success in life. After this, I worked hard at this wonderful memory system, and within a week I found I could recall passages from books and quote them with ease; names, addresses and business appointments were remembered immediately; and in four months I had succeeded in learning Spanish.

If I have obtained from life a measure of wealth and happiness, it is to that book I owe it, for it revealed to me the workings of my brain.

Three years ago, I had the good fortune to meet its author, and I promised him to propogate his method, and today I am glad of this opportunity of expressing my gratitude to him.

I can only suppose that others wish to acquire what is, after all, the most valuable asset towards success in life.

Borg's address is: E. J. Borg, c/o Aubanel Publishers, 14 Highfield Road (Rathgar), Dublin, Ireland. Apply to him for his little book, "The Eternal Laws of Success." It is free to all who wish to develop their memory.

Shrinks Hemorrhoids New Way Without Surgery Stops Itch—Relieves Pain

For the first time science has found a new healing substance with the astonishing ability to shrink hemorrhoids and to relieve pain—without surgery.

In case after case, while gently relieving pain, actual reduction (shrinkage) took place.

Most amazing of all—results were so thorough that sufferers made astonishing statements like "Piles have ceased to be a problem!"

The secret is a new healing substance (Bio-Dyne*)—discovery of a world-famous research institute.

This substance is now available in *suppository* or *ointment form* under the name *Preparation H.** Ask for it at all drug counters—money back guarantee. *Reg. U.S. Pat. Off.

LET DeVRY TECH PREPARE YOU IN SPARE TIME AT HOME AS AN

How to build a big-pay future in the Air Conditioning and Refrigeration industry with CTI Home Training Kits

A better job or your own business

The news is spreading fast: America's finest opportunity field is now Air Con-ioning and Refrigeration! Today there are over 150 illion domestic and industrial units in use. Over 6 mil-n new freezers, refrigerators and air conditioners are anufactured annually. So quickly is the industry ex-nding that *20,000 service technicians must be trained* ch year. Yes, air conditioning is a big, *uncrowded* field ere the opportunities are as large as the paychecks!

rn at home by practicing. It's easy to master this craft. TI sends you 25 kits of parts and tools to build a heavy-ty, commercial-type, ¼ h.p. condensing unit (illus-ted above). You complete 23 work projects—do 10 uble-shooting jobs. Then you build an air conditioner, ezer, refrigerator or milk cooler.

ke money as you train. So practical is CTI training at many students earn extra cash fixing and installing. me make calls on their own; others work for local appli-ce dealers. CTI training pays its way—actually puts you in a part-time business while you're still a student!

Be a service engineer. Few universities offer refrigeration courses. As a result, the industry chooses its engineers from technician ranks. If you have above-average ability, you too may get into planning and estimating—the engi-neering phase of a great business.

Go in business. This is one of the easiest of all fields in which to start small and grow big. You make friends as you make calls, and build a list of potential customers. You also can sign service contracts with food stores, taverns, motels, restaurants, etc. CTI has special infor-mation on how to get started.

Write for new catalog. Your opportunities in the air conditioning and refrigeration industry are thoroughly covered in our big new booklet. *Mail coupon for your free copy.* We'll also send a lesson sample so you can see for yourself how easy it is to learn this top-pay, secure craft. Be sure to mail coupon *today*.—Commercial Trades Institute, Chicago 26, Illinois.

Don't be half-trained.

CHOOSE YOUR CAREER

Train at home . . . in spare time . . . in one of America's Big 3 industries!!!

MAKE MORE MONEY...

A Successful Career . . . Security . . . Are Yours NOW in Modern Industry!

Every one of the "Big 3" industries...TV-RADIO-ELECTRONICS...AUTO MECHANICS AND DIESEL...AIR CONDITIONING-REFRIGERATION-ELECTRICAL APPLIANCES...each is growing at a tremendous pace.

Right now is the best time for you to get into the industry of your choice! You can be a part of its growth...you can increase your earning power... you can really build a Successful, Secure Future, filled with all the good things life has to offer!!! Send for information NOW...TODAY. We'll give you all the facts by mail. There is no obligation on your part...nor will you be inconvenienced...as NO SALESMAN WILL CALL ON YOU!!!

N.T.S. TRAINS YOU RIGHT, FAST AND EASY!

Incomplete "short-cut" training limits your earning power, even disqualifies you for top-pay jobs. N.T.S. gives you training in All Phases...to qualify you for any job in your field...for greater profits all year 'round!

YOUR N.T.S. TRAINING IS BETTER, MORE COMPLETE, LOWER COST!

BETTER...proved and tested in N.T.S. Resident School Shops and Laboratories, by the OLDEST and LARGEST School of its kind in the world. Established in 1905.

MORE COMPLETE...you learn ALL Phases, and you receive EVERYTHING YOU NEED—Lessons, Manuals, Diagrams, many big Professional Kits with parts, tools, instruments for your experimental, repair, service, and trouble-shooting projects. You also receive many valuable training "Extras" to assure your success.

LOWER COST...other schools make several courses out of the material in each one of our MASTER COURSES...and charge you *more for less* training than you get in any one of our "Big 3" at ONE LOW TUITION.

EARN AS YOU LEARN

We'll show you how you can earn money right from the start. Many students pay for their courses—and earn much more—while studying. So can you!

RESIDENT TRAINING AT LOS ANGELES

If you wish to take your training in our Resident School at Los Angeles, start NOW in our big, modern Shops and Labs. Here you work with latest equipment, professionally installed... finest most complete facilities offered by any school. Expert, friendly instructors. Personal attention. Graduate Advisory Service. Help in finding home near school...and part time job while you learn. Check box in coupon for full information.

OVER 3,000,000 COPIES SOLD

"I never knew anything about car repairs until I got this wonderful book. It has paid for itself time and time again."

HUNDREDS OF LETTERS LIKE THIS PROVE MOTOR'S MANUAL REALLY WORKS. TRY IT FREE AND DISCOVER HOW EASY IT IS TO . . .

FIX ANY PART OF ANY CAR

IF YOU could see the hundreds and hundreds of letters of praise in our files, you wouldn't hesitate to take advantage of this Free Trial offer.

Some of them are from crack mechanics like Mr. V. Lauria of Nevada who writes "I have been a mechanic for 25 years, but MOTOR'S Manual still takes me out of the tight spots."

Others are from beginner mechanics like Michael Baliczky of New Jersey who says "I amazed myself and my friends, too. I now do jobs that stumped me before."

All have one thing in common: they agree that MOTOR'S Manual makes any auto repair job a "cinch". No wonder you'll find this famous how-to-do-it book on almost every garage workbench in the country. And no wonder that more than *3,000,000 copies* – yes, THREE MILLION copies – have been sold.

Eliminates Guesswork – Shows Exactly "How to Do It"

MOTOR'S Manual is so simple, so complete, you just *can't* go wrong. You'll master any car repair the way the experts do – without guesswork, without false starts, without wasting time, energy or money.

Just look up the job in the giant Troubleshooter Index. Turn to the right page. Follow the crystal-clear step-by-step instructions and pictures. And *presto* – the job is done, quickly, easily, and *right!*

It's like having a factory expert right at your elbow, guiding your hands through every job – showing you where to start, exactly what to do every step of the way!

Everything You Need to Know

This new revised edition brings you the "guts" of 176 Official Shop Manuals. Covers 1,967 car models from 1953 through 1960. Includes 225,000 service and repair facts on engines, automatic transmissions, ignitions, carburetors, steering gears, generators, distributors, power steering, brakes, starters, etc. – everything from bumper to rear end!

SEND NO MONEY

Mail the coupon today. Use the Manual as your own for a whole week, FREE. If you don't agree that it is the greatest time and work saver you've ever seen, simply return it in 7 days and owe nothing. Mail the coupon *now!* **MOTOR Book Dept., Desk 033, 250 West 55th Street, New York 19, N. Y.** *(Schools, Bookstores: Write for discounts.)*

Same FREE Offer on MOTOR'S New Truck Manual

Brand new! Covers EVERY job on EVERY popular make gasoline and Diesel truck made since 1952. FREE 7-Day Trial.

SENT FREE

for 7-Day Examination

See for yourself 1,100 double-size pages, 2,850 drawings and photographs. 30,000 essential specifications, 195 "Quick-Check" Charts, 225,000 service and repair facts – all at your fingertips!

Covers All Models – 1953 thru 1960

Buick, Cadillac, Chevrolet, Chrysler, Continental, Corvair, Dart, De Soto, Dodge, Edsel, Falcon, Ford, Hudson, Imperial, Jeep, Lincoln, Mercury, Nash, Oldsmobile, Plymouth, Pontiac, Rambler, Studebaker, Thunderbird, Valiant

• *Latest Figures*

Could you tell me how many people there are in Tibet?

Jody Rivais
Columbus, Ga.

One million, not counting Abominable Snowmen, Red Chinese or food-plan salesmen.

• *Ice Yachting Clubs*

After reading the how-to-build article about Frostfish, by Cal Smith, in the Nov. MI, and Faster Than The Wind, by Laurence M. Whyte, in the Jan. MI, many readers became interested in joining ice yachting clubs. So here are some addresses:

Mr. John Childs, Sec'y., Eastern Ice Yachting Assn., 527 Main St., New Rochelle, N. Y.

Mr. James Robinson, Sec'y., Northwestern Ice Yachting Assn., Box 159, RFD 1, Richland, Mich.

International Skeeter Assn., 2255 Sherman Ave., Madison 4, Wis.

Mr. Ralph Templin, Sec'y., DN-60 Class, 21207 Redmond, East Detroit, Mich.

Mr. Frank Hansa, Sec'y., Yankee Ice Yacht Assn., 33 W. 42nd St., New York 36, N. Y.

• *Fipples For Brazil*

On page 98 of your MI of June, 1957 we found an article on the English-made woodwind recorder, the fipple. We wrote to the Dolmetsch Company for information on making them ourselves but they weren't interested. Why should we think of making them when they can be bought? Well, the sad answer is terrific duties on imports and months waiting for things. The best way to get anything is to have someone bring it with him. So we would like to contact someone traveling from England or the U.S.A. to Brazil, or someone with information on making fipples, recorders or any other unusual instruments.

L. C. Boddy
Missionary
Caixa Postale 365
Joinville, Santa Catarina
Brazil

It seems too bad that anybody who wants to make a fipple or play a fipple shouldn't get to do it. Any fipplists here or in Blighty care to contact these jungle cats?

• *Here's Your Worm Caller*

Still looking for a worm signaller? The one above is made with a magneto telephone generator which may be purchased at almost any surplus store for $2.50. Connect wires to the "hot" terminals. Pour water in the ground near the rods to make a better contact.

Dennis L. Radke
Oregon City, Ore.

Reader Radke is kindly answering a letter in the March '59 MI asking for an electric worm digger with a portable power source.

Become a specialist in a booming industry

Own a Business

We'll train and establish you, start part time if employed!

IN YOUR TOWN there's a real opportunity right now for you to meet the growing demand for cleaning of costly carpets and upholstery—services for which homeowners are ready to pay good money. Old mechanical methods have proved to be harmful to fabrics so the field is wide open with our exclusive, safe, scientific absorption method of cleaning.

This business is easy to learn and quickly established. There's no overhead, no shop needed—you operate from home and provide all services in your customers' homes. Just 2 average jobs a day net $8,750 first year in this $750 million a year industry! If now employed, start part-time.

6 Ways to Make Money

You get exclusive use of unique absorption process which cleans without harmful scrubbing, soaking or shrinkage. It's acclaimed by housewives, mfrs and backed by McCalls and Parents' Seals. Five other profitable services are **soil retarding, mothproofing, flameproofing, spotting** and **carpet repairing.** Thus, on most jobs you multiply profits. *"Headquarters say gross $9.00 per hour. I gross up to $12.00.—Many dealers I know do even better,"* wrote Dan Chilcott, of N. Platte, Neb.

We Help You Grow

Under our unique cooperative program, you are fully trained through a nearby dealer and at our 50-hour training school. You're kept up-to-date through a monthly magazine, nat'l conventions, and at regional meetings where Hdqtrs' staff *come to you* in your area. You're backed by nat'l advertising in consumer *(McCalls, Parents', House & Garden,* etc.) and trade magazines. Others of over **27** continuous services which help assure your success include: Individual counseling (staff of specialists give you prompt, expert counsel), ad kits, folders, product development, etc. *"Staff at Hdqtrs to the last man is the best friend I have in business. They're always willing to do everything possible to guide me to even greater success,"* says J. Hoak of Charleroi, Pa.

EASY TERMS If needed, we help finance you. Everything furnished. Write for details today.

DOES GETTING UP NIGHTS MAKE YOU FEEL OLD?

NEW YORK—Special: Thanks to new, scientific laboratory formulation, thousands of men and women now escape feeling old, tired, irritable and depressed from losing sleep and worrying about "Bladder Weakness"—too frequent, burning and itching urination, Bed Wetting, Getting Up Nights—or Strong Cloudy Urine, due to common Kidney or Bladder Irritations, which often result in secondary Backache, Headache and Nervousness. In such cases *New Improved* CYSTEX usually gives quick, calming relief by combating irritating germs in acid urine; and by relaxing, analgesic pain relief. Safe for young or old. Get CYSTEX at druggist. Feel better fast or money back.

I'd like to give this to my fellow men...

while I am still able to help!

I was young once, as you may be—today I am older. Not too old to enjoy the fruits of my work, but older in the sense of being wiser. And once I was poor, desperately poor. Today almost any man can stretch his income to make ends meet. Today, there are few who hunger for bread and shelter. But in my youth I knew the pinch of poverty; the emptiness of hunger; the cold stare of the creditor who would not take excuses for money. Today, all that is past. And behind my city house, my summer home, my Cadillacs, my Winter-long vacations and my sense of independence—behind all the wealth of cash and deep inner satisfaction that I enjoy—there is one simple secret. It is this secret that I would like to impart to you. If you are satisfied with a humdrum life of service to another master, turn this page now—read no more. If you are interested in a fuller life, free from bosses, free from worries, free from fears, read further. This message may be meant for you.

By Victor B. Mason

I am printing my message in a magazine. It may come to the attention of thousands of eyes. But of all those thousands, only a few will have the vision to understand. Many may read; but of a thousand only you may have the intuition, the sensitivity, to understand that what I am writing may be intended for you—may be the tide that shapes your destiny, which, taken at the crest, carries you to levels of independence beyond the dreams of avarice.

Don't misunderstand me. There is no mysticism in this. I am not speaking of occult things; of innumerable laws of nature that will sweep you to success without effort on your part. That sort of talk is *rubbish!* And anyone who tries to tell you that you can *think* your way to riches without effort is a false friend. I am too much of a realist for that. And I hope you are.

I hope you are the kind of man—if you have read this far—who knows that anything worthwhile has to be *earned!* I hope you have learned that there is no reward without effort. If you have learned this, then you may be ready to take the next step in the development of your karma—you may be ready to learn and use the secret I have to impart.

I Have All The Money I Need

In my own life I have gone beyond the need of money. I have it. I have gone beyond the need of gain. I have two businesses that pay me an income well above any amount I have need for. And, in addition, I have the satisfaction—the deep satisfaction—of knowing that I have put more than three hundred other men in businesses of their own. Since I have no need for money, the greatest satisfaction I get from life, is sharing my secret of personal independence with others—seeing them achieve the same heights of happiness that have come into my own life.

Please don't misunderstand this statement. I am not a philanthropist. I believe that charity is something that no proud man will accept. I have never seen a man who was worth his salt who would accept something for nothing. I have never met a highly successful man whom the world respected who did not sacrifice something to gain his position. And, unless you are willing to make at least half the effort, I'm not interested in giving you a "leg up" to the achievement of your goal. Frankly, I'm going to charge you something for the secret I give you. Not a lot—but enough to make me believe that you are a little above the fellows who merely "wish" for success and are not willing to sacrifice something to get it.

A Fascinating and Peculiar Business

I have a business that is peculiar—one of my businesses. The unusual thing about it is that it is needed in every little community throughout this country. But it is a business that will never be invaded by the "big fellows". It has to be handled on a local basis. No giant octopus can ever gobble up the whole thing. No big combine is ever going to destroy it. It is essentially a "one man" business that can be operated without outside help. It is a business that is good summer and winter. It is a business that is growing each year. And, it is a business that can be started on an investment so small that it is within the reach of anyone who has a television set. But it has nothing to do with television.

This business has another peculiarity. It can be started at home in spare time. No risk to present job. No risk to present income. And no need to let anyone else know you are "on your own". It can be run as a spare time business for extra money. Or, as it grows to the point where it is paying more than your present salary, it can be expanded into a full time business—overnight. It can give you a sense of personal independence that will free you forever from the fear of lay-off, loss of job, depressions, or economic reverses.

Are You Mechanically Inclined?

While the operation of this business is partly automatic, it won't run itself. If you are to use it as a stepping stone to independence, you must be able to work with your hands, use such tools as hammer and screw driver, and enjoy getting into a pair of blue jeans and rolling up your sleeves. But two hours a day of manual work will keep your "factory" running 24 hours turning out a product that has a steady and ready sale in every community. A half dollar spent for raw materials can bring you six dollars in cash—six times a day.

In this message I'm not going to try to tell you the entire story. There is not enough space on this page. And, I am not going to ask you to spend a penny now to learn the secret. I'll send you all the information, free. If you are interested in becoming independent, in becoming your own boss, in knowing the sweet fruits of success as I know them, send me your name. That's all. Just your name. I won't ask you for a penny. I'll send you all the information about one of the most fascinating businesses you can imagine. With these facts, you will make your own investigation. You will check up on conditions in your neighborhood. You will weigh and analyze the whole proposition. Then, and then only, if you decide to take the next step, I'll allow you to invest $15.00. And even then, if you decide that your fifteen dollars has been badly invested I'll return it to you. Don't hesitate to send your name. I have no salesmen. I will merely write you a long letter and send you complete facts about the business I have found to be so successful. After that, you make the decisions.

Does Happiness Hang on Your Decision?

Don't put this off. It may be a coincidence that you are reading these words right now. Or, it may be a matter that is more deeply connected with your destiny than either of us can say. There is only one thing certain: If you have read this far you are interested in the kind of independence I enjoy. And if that is true, then you must take the next step. No coupon on this advertisement. If you don't think enough of your future happiness and prosperity to write your name on a postcard and mail it to me, forget the whole thing. But if you think there is a destiny that shapes men's lives, send your name now. What I send you may convince you of the truth of this proverb. And what I send you will not cost a penny, now or at any other time.

VICTOR B. MASON

CHICAGO 26, ILLINOIS

Invention Clinic

Joseph H. Kraus

In this column each month Mr. Kraus will answer as many letters as space permits on those subjects he feels to be of widest general interest. Time does not allow him to reply to any letters except those printed here. Address your questions to the Invention Clinic, *Mechanix Illustrated*, 67 West 44 St., New York 36, N. Y.

Multiple Die Cutter

Ralph P. Bagdigian of Reading, Mass., sends copies of his two patents for machinery to cut various sizes of greeting cards and the like from sheets of material. What kind of company would be interested?

There are about 19 companies in the U.S. which make machinery for this purpose. It might be advisable for you to send descriptions of your invention to each of them. Unless you have claims that engineers might consider outstanding, your chances of a sale are not rosy. Remember that they have their own machinery which now is being produced and sold.

Valve System For Gas Engine

Dean Dunlap of Franklin, Neb., says he has designed a valve system for gas engines that is simpler in construction and eliminates the major portion of present valve malfunctions. Is there a market for such a system?

Claims like this have been made many times before. They need to be substantiated, and you must be sure that your system has not been patented by others. Chances for acceptance by a manufacturer are not good unless you have something of revolutionary value. The cost of tooling for a new design and the educating of servicemen is too great.

INVENTOR'S TIP OF THE MONTH

Foods, paints, cosmetics, insect sprays, cleaning solutions, plant chemicals and dozens of other products are now being sold in pressurized containers. Some bright person should invent and market a refillable container to take nearly any pourable material. It could be pressurized with chemical tablets, bottled gas, or a simple mechanical system could be employed.

Telephone Cover

Barbara Pina of Honolulu, Hawaii, has designed a special-purpose cover for telephones. Is this idea worth proceeding with?

Yes, it is, even though many receiver covers have appeared and telephone companies object to them. I believe that if you could introduce your design on the market it would meet with quick acceptance by the people you hope to reach. Start with a patent search; after that, seek a large manufacturer.

Formulas For Weight Control

Grace Zier of Billings, Mont., says she has discovered two formulas which are effective in controlling weight. If she submits these to pharmaceutical companies she may need to relinquish all rights to them. To whom can she turn to learn if they have any market value?

Maybe you could encourage your local college to conduct some tests with overweight mice. Then if the reports establish the safety and effectiveness of your formula, you might be able to negotiate a deal with some firm. It won't be easy.

Toy Cannon

Fred G. Hofmann of Miami Beach, Fla., has developed a toy cannon which fires a mixture of hydrogen and oxygen. Since the basic

FINANCIAL HELP TO START YOUR OWN HOME BUSINESS!

Tired of being squeezed between rising prices and a *stationary salary*? Could you use a nice little home-business to bring in *extra income* from your spare time, evenings and week-ends? I can show you *how*—will even *help finance* you, if you're short of cash. Sound unreasonable? Wondering how I can afford to do it? Well, it's simple. The business I'm talking about uses supplies. I *make* and *distribute* those supplies. So do other firms—but I'm willing to gamble that when your business gets rolling you'll rather do business with a *friend* than with strangers who did not show up until you were in the money. I've gambled the same way with hundreds of others, and it has paid off by helping me build the *biggest business of its kind in the world!* The Golden Rule of "do unto others . . ." *always works* for those who give it a fair trial.

What is this business? It's *printing without a press*, an amazing process I call *"Screen Print."* With it, you can turn out printing in *gorgeous coloring* that many big shops cannot duplicate, even with presses costing *thousands of dollars!* Yet my equipment *(supplied* to you with my instructions) *weighs only a few pounds*, can be set up on a *small table* in the corner of your garage, basement, attic, or even a bedroom. You can learn in a *few hours* to print on paper, metal, glass, plastic, leather, cloth, and about anything you can name—even on curved or round surfaces that ordinary printing presses cannot handle at all! And I show you how to get *big-profit orders* from stores, factories, theatres, schools, and practically every type of business or organization for miles around—even by *MAIL ORDER* coast to coast.

JUST SEND ME YOUR NAME & ADDRESS—NO MONEY

Remember, I'll help finance you, so *don't worry about the money*—whether you are employed or not. I'm *sure* I can help you get set in a home business that may settle your money problems forever. Just send name and address for FREE information, without obligation. *TODAY SURE.*

Mr. C. J. Nowak, President, Screen Print Co., Dept. 33, 15127 S. Broadway, Los Angeles 61, California

Invention Clinic

[*Continued from page* 18]

ciples used are so well known, would a tent application be worth while?

Common knowledge of basic principles need t bar you from winning a patent.

Your search report should have included e toy carbide cannon that can be purchased large toy stores and is more closely related your idea. Buy one, examine it and comre it with your design. Then see if you can ke yours for one fifth of the price you paid.

mane Animal Trap

James Stamm of Grand Bahama Island, Fla., s designed and built a trap for catching ds and small animals alive. Should he inst in a patent?

There are traps on the market which catch all animals alive, so I am somewhat dubis about the great need for another. Howr, your design differs considerably from se I have seen. It looks as though it might nage the wing of any bird that does not st firmly on the trigger mechanism. On the er hand, your design might double as a b trap. Additional testing of both types of use is in order before you apply for a patent. This idea seems worthy of more investigation.

Cigarette Lighter

John Scala of Toronto, Ontario, has nearly completed an automatic cigarette lighter for cars. It takes up to a pack of cigarettes and works from the vacuum of the motor. Is there any point in furthering it?

Forget it. A device which does the same job has been on the market for many years.

Centrifugal-Bladed Impeller

Jacob S. Jake of St. Clair Shores, Mich., sends diagrams and description for a centrifugal-bladed impeller to be applied to compressors and forced draft fans. What do I recommend?

Your blade design is similar to an old and not too popular style of windmill that never was noted for its efficiency. But you are using a combination of drives which might give added advantages. Perhaps your best procedure would be to make a model and test it.

PLAY RIGHT AWAY

ANY INSTRUMENT

—even if you don't know a single note now

NOW it's EASY to learn ANY instrument. No boring exercises. Even if you don't know a single note now you can play delightful pieces—from your FIRST lesson! BY NOTE. Make amazing progress. sportsman and star pro halfback

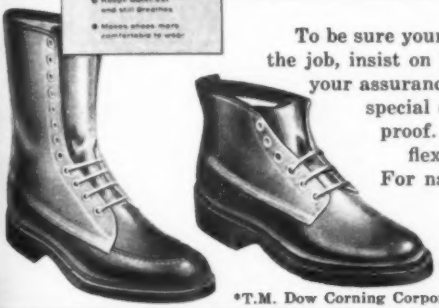
"Waterproof boots with SYL-MER
Formerly Sylflex
leather really keep your feet dry!"

"I've learned a leather boot can't be waterproof without two things:

1. SYL-MER* leather for water repellency plus free breathing comfort, and

2. Water-tight construction with all seams sealed against leakage."



To be sure your feet stay dry while hunting, or on the job, insist on boots with the SYL-MER tag. It's your assurance that the manufacturer has taken special care to make the boot truly waterproof. It also means leather stays soft and flexible even after repeated wettings. For name of nearest dealer, plus FREE action drawing of Frank Gifford suitable for framing, write:

PICK YOUR OWN SUCCESS STORY FROM THIS PAGE

These are the true stories of people who seemed trapped in routine, low-pay, shaky jobs. Handicapped by a lack of proper training they couldn't get the things they wanted out of life—more money, job security, happiness.

They are a small sample of thousands of men and women—young and old—who turn to I. C. S. for help. Their will to learn plus I. C. S. training have changed the course of their lives.

Are you discouraged with your job and pay, feel you can't improve yourself because of a lack of specialized training? Well, these men and women were in the same boat. But I. C. S. made the difference. Their success stories could be yours as well.

Mark and mail the coupon above today.

Wins $3000 contest—"After my I.C.S. Courses I secured a new position," says Mr. Cecil Rhodes. "My income has more than doubled and I recently won a $3000 sales contest."

From clerk to assistant ed[illegible] mator. "Any way you look [illegible] it," writes Mrs. Edna Jam[illegible] "the time and money [illegible] spends for I.C.S. Courses [illegible] be repaid a thousandfold."

"As a college student I found I. C. S. very valuable." Robert Lee took the I.C.S. Course in Advertising, is now Promotion Manager for a large corporation. "I.C.S. got me started on the way up," he says.

Doubles his income—"I.C[illegible] made my engineering w[illegible] more interesting," repo[illegible] Frank Bachtik. "I was mak[illegible] $192 a month. But throu[illegible] I.C.S. my present income [illegible] more than doubled."

3 FREE BOOKS are yours as a gift fr[illegible] I.C.S. to show you how to get started on the ro[illegible] to better pay, real job security.

NEW RUBBER STAMP BUSINESS PAYS BEGINNERS UP TO $9.20 AN HR.

START AT HOME IN SPARE TIME with Table Top Machine!

The multi-million dollar Rubber Stamp business—once controlled by a few big companies—is now being taken over by small operators—one in each community throughout the United States. Men and Women who have this inexpensive machine can turn out huge quantities of Rubber Stamps with special wording that buyers once were forced to buy from big cities. Material costing only 27¢ makes a stamp that sells for $1.80. The machine that does the work is simple and easy to operate and it turns out as many as six Rubber Stamps at a time, each with different wording such as names, addresses, notices, stock numbers, prices and other "copy" needed by offices, factories and individuals. Working full capacity, it can earn as much as **$9.20 an hour for the operator!** Now you can get into the big-pay business yourself, with your own home as headquarters. You don't need experience. We supply everything, including complete instructions and eight ways to get business coming in fast. Start making up to $9.20 an hour from the very beginning. Cash in on the profitable Rubber Stamp business in your community, right away. We'll mail full particulars FREE and no salesman will call. Be first in your locality. Rush coupon today or send your name on postcard to

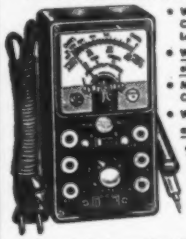
Superior's New Model 70 UTILITY TESTER®

FOR REPAIRING ALL ELECTRICAL APPLIANCES MOTORS • AUTOMOBILES • TV TUBES

As an electrical trouble shooter the Model 70:



- Will test Toasters, Irons, Broilers, Heating Pads, Clocks, Fans, Vacuum Cleaners, Refrigerators, Lamps, Fluorescents, Switches, Thermostats, etc.
- Will test all TV tubes for open filaments, interelement shorts, burned out tubes, etc.
- Measures A.C. and D.C. Voltages, A.C. and D.C. Current, Resistances, Leakage, etc.
- Will measure current consumption while the appliance under test is in operation.
- Incorporates a sensitive direct-reading resistance range which will measure all resistances commonly used in electrical appliances, motors, etc.
- Leakage detecting circuit will indicate continuity from zero ohms to 5 megohms (5,000,000 ohms).

As an Automotive Tester the Model 70 will test:

• Both 6 Volt and 12 Volt Storage Batteries • Generators • Starters • Distributors • Ignition Coils • Regulators • Relays • Circuit Breakers • Cigarette Lighters • Stop Lights • Condensers • Directional Signal Systems • All Lamps and Bulbs • Fuses • Heating Systems • Horns • Also will locate poor grounds, breaks in wiring, poor connections, etc.

Model 70 comes complete including 64 page book, only $15.85

SHIPPED ON APPROVAL

NO MONEY WITH ORDER—NO C.O.D.

Try it for 10 days before you buy. If completely satisfied then send $2.00 and pay balance at rate of $4.00 per month for 3 months — No Interest or Finance Charges Added! If not completely satisfied, return to us, no explanation necessary.

MOSS ELECTRONIC, INC.
Dept.D-724, 3849 Tenth Ave., New York 34, N. Y.
Please rush Model 70. If satisfactory, I will pay on terms specified. Otherwise I will return tester.

GRAYSON CO. • Dept. B-7, 210 Fifth Ave., N. Y. 10

MONEY-BACK GUARANTEE Name..... Address..... City..... State..... **$1.98**

Not everyone does as well, but T. N. Cody, who started a business of his own, reports . . .

For 12 months I've averaged

$800 PER MONTH INCOME

—most of it clear profit for me!

Many men have discovered how to be independent, to be free of layoffs and bosses. C. G. Naples grossed more than $200 his first week. A father-son combination grossed $44,000 their second year. H. Lemon says, "*I netted $133 in one 8-hour day.*"

How much you make depends largely on you. You need no special skill, no large investment. Start part time if you wish.

NO SHOP NECESSARY • Our Electric Deterger shampoos rugs, carpets right on floor—removes dirt and grime and helps to show their natural color and beauty. So efficient and safe it is used by largest railroads and hotels.

This is not a lease proposition. *You own the machine, you work when and where you please and all the money you take in is your own. You take no risk. Machines fully guaranteed.*

WHAT A DIFFERENCE TWO CYLINDERS MAKE! THAT'S WHY YOU'LL LOVE THAT LARK V-8

In the field of domestic engines, two more cylinders make the difference between adequate transportation and spirited performance ➤ And sometimes performance is fun, particularly when the price is just a little more than the "6" ➤ The Lark V-8 in standard form pulls 180 hp at 4500 rpm and 260 ft. lb. of torque at 2800 rpm. With optional 4-barrel carburetor and dual exhausts, you get 195 hp at 4500 and 265 ft. lb. at 3000 so that drivers can turn zero to sixty in just over nine seconds ➤ Economical, too! In last year's Mobilgas Run, The Lark V-8 with automatic transmission topped all other eights ➤ The Lark V-8 is rugged. It runs on five massive main bearings and (here's the hooker), piston travel per mile in high gear (3.31 rear) is only 1380 feet. Engine revs per mile in high gear is an easy 2550 ➤ See your Studebaker Dealer and try The Lark V-8. You'll love it!

LOVE THAT **LARK** *BY STUDEBAKER*

MAIL FOR McCAHILL

UNCLE TOM ANSWERS HIS MOST INTERESTING LETTERS IN THIS COLUMN. WRITE TO HIM IN *MECHANIX ILLUSTRATED*, 67 WEST 44TH ST., NEW YORK 36, N. Y.

● *Tom, last night we saw the Corvair and drove the Falcon. We're really interested in a new small car but Detroit is up to its old tricks again. By the time you total up the price tag, it's not $2,000 but between $2,400 and $2,500. I say the small American cars will never compete with the little foreign cars unless they come down in price as well as size.*

Herb Polesie
Santa Monica, Calif.

Last summer when I tried to beat the right answers out of the boys as to what the price tags would be on the small cars after production started, I was assured by both Chevrolet and Ford men that their Corvairs and Falcons would sell for a "hair under $2,000 delivered in New York." When these price tags start inching close to the $2,500 mark it means absolutely no competition whatsoever for cars such as the Volkswagen and Dauphine, which can be bought for roughly $800 less. Some rumors have reached me that dealers are padding the prices in order to keep their bread-and-butter cars (the bigger jobs) from looking overpriced. Anyway, I'm happy I wrote on these pages that at $2,000 or under, the three new compact cars would prove as popular as Marilyn Monroe at a Sing-Sing picnic—but if they allowed the cars to cost much more, their comparative value would become highly questionable.

● *Could you tell me where the famous old Simplex automobile was manufactured?*

George Koch
Baltimore, Md.

New Brunswick, N. J.

● *Since my knowledge of things mechanical stops after I've plugged in the toaster, I'm not the most likely person to be writing to you but I am an avid reader of yours. Now I have a question I'd appreciate some help on. Recently my husband purchased a 1959 Citroen sedan for me. I have gone through all the back issues of MI but my back-tracking has been useless. Could you tell me when you wrote something on the Citroen?*

Mrs. Amos J. Rogers
Chinchilla, Pa.

We tested the Citroen in Europe for MI back in Sept. '52 but haven't tested one since. Incidentally, you didn't mention what model you own.

● *Sixty years of progress in the automobile business has finally gotten us to the point where the jacks supplied with the cars are practically impossible for anyone to use. Some of the bumper jacks today are a disgrace. I had a flat on my station wagon the other night and just couldn't get the rear off the ground. The stringbean-like jack simply bent like a fresh spring willow. What can we do?*

J. T. Harley
San Francisco, Calif.

Jacks have been getting sleazier and sleazier with all American automobiles. The last good jack I had was on my '53 Lincoln. Wish I'd kept it.

● *I don't know what you know about bikes, but I promised Junior I'd buy him the best bike in the world if he got all A's in Junior High—and it looks like he's going to do it. Since I've been reading your car stuff for years I'd like to ask you what is the world's best bike?*

Harry Fabian
Memphis, Tenn.

My own bike is a Schwinn Paramount and I believe it to be the best-made bike in the world. It's going to cost you a bundle though, Pop—none of that $40 bargain basement stuff. It'll kick hell out of two C-notes but it's worth every dime if you like truly fine machinery.

[*Continued on page* 48]

Sworn statement from CHAS. LEMMING reads:

"After starting my own business

I've averaged $100 A DAY —most of it clear profit!"

• *If you want to be independent—free from layoffs, bosses—start profitable, year 'round business of your own.* **Ours is NOT a lease proposition.** *You own the machine, you work when and where you please, and all the money you take in is your own.* **FREE** *book tells you how.*

MAIL COUPON TODAY FOR FREE BOOK

VON SCHRADER MFG. CO.
312 "D" Pl., Racine, Wisconsin

Without obligation rush your **FREE** booklet about how I can start my own permanent, profitable electric Upholstery Cleaning business.

Name_____

Address_____

City_____ Zone____ State____

Not everyone does as well... Mr. Lemming owns two machines

In city of less than 50,000, Mr. Lemming started his own business after filling in coupon like one below. He averaged $100 a day during first year, some days $200. F. E. Doran grossed $1050 in single month. Geo. Held grossed $300 in one week.

How much you earn depends largely on you. No special skill, no large investment required for our electric upholstery cleaning machine. Start spare time until full time justified. Hire helpers as needed.

NO SHOP NECESSARY • You clean upholstered furniture on customers' premises—homes, hotels, motels, etc. Auto upholstering, too. No hauling; operate from your home. Watch business grow as satisfied customers tell friends. Supplies cost little, profits high.

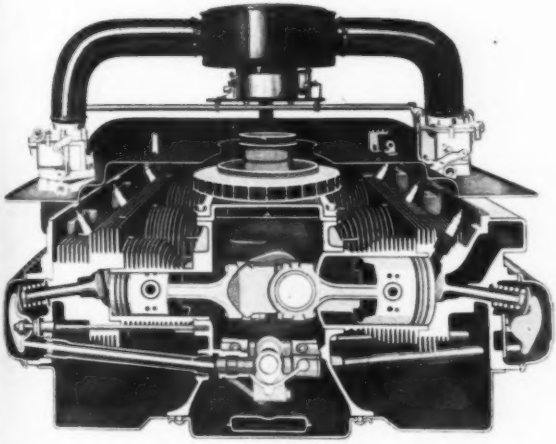
CORVAIR'S A NEW SMOOTHIE

Behind Corvair's array of engineering innovations (*literally behind*) lies its engine: America's first and only rear-mounted air-cooled aluminum "pancake" six. The spec sheet reads like this: 140 cubic inches of displacement, bore 3.375 inches, stroke 2.60 inches, maximum horsepower 80 @ 4400 r.p.m., maximum torque 125 ft.-lb. @ 2400 r.p.m. (Hitch these figures to a car weighing only 2,375 pounds at the curb and you've got yourself a peppery package, if we do say so.)

Anyway, of the four adjectives, we particularly like "pancake." Translated, it means that this is a horizontally opposed six, instead of the conventional in-line type. If you cut the engine crosswise, it would look like the picture.

There are three pairs of cylinders, of course, each working in unison. When one piston is at the top of its stroke, so is its mate. So? Well, Barney Navarro, who's engineering editor of Motor Life magazine and should know about these things, writes "opposed engines (of Corvair's design) are inherently balanced." In other words, each pair of pistons, rods and crank throws balance each other, and there's no need for counterweights. Because this type of engine is inherently balanced, it's inherently smoother than an in-line six. And after all, ultra-smoothness is just what you're after.



As you might suspect, there's precious little of the commonplace in a Corvair engine. Yet there's nothing so radical that it hasn't been proved time and again for reliability. About the only question left now is whether we can build enough of these cuties to fill the demand. One thing you ought to do for sure is to try one out. After that, you'll probably be badgering us to build *you* one. This is a problem we're happy to have. . . . Chevrolet Division of General Motors, Detroit 2, Michigan.

That rear engine is just one of the engineering marvels in this new Corvair. Others include the silken smoothness of independent suspension at all 4 wheels . . . a practically flat floor, front and rear . . . briskly competent handling . . . and the ingenious unit combining the engine, transmission and rear axles. Be prepared to spend some time with these wonders when you check out the revolutionary Corvair at your dealer's.

Tom McCahill Reports on:

Facts about Replacement Mufflers

Today's automotive tastes have caused very complex designs and, in some cases, some weird engineering. Underslung styling and high compression engines, plus dozens of power-assist gadgets, have become pretty common. However, this has created new problems in maintenance. Let's consider mufflers, for instance.

Typical current hopped-up Detroit gargantuas demand a different type of food than old-time cars. They take to 100-plus octane gas like a cokie to a needle, and they pump out acid-loaded fumes into the muffler system that could eat a hole through it like a rat through cheese. This calls for better-designed mufflers. They must be built to nestle into the maze beneath today's underslung wagons. These problems are doubled when cars are equipped with dual exhaust systems, and all this results in shorter muffler life. Mufflers are the most common replacement item on all modern automobiles. The big question is: What are the muffler kids doing to increase muffler life? The answer is, there are only three things they can do. First, use heavier, thicker steel. Second, design the interior so as to reduce acid-loaded condensation and to avoid hotspots. Third, coat mufflers with corrosive-resistant materials. AP mufflers stand out on all three counts like a well-filled Bikini at a Vermont swimming pool. APs have more and heavier internal parts, up to two-thirds heavier outer shells, up to one-third heavier heads than other mufflers. AP's exclusive Dri-Flow design eliminates cold spots—cuts way down on corrosive condensation. And AP offers more models with rust-resistant coating than any other manufacturer. Yet AP mufflers sell for the same price as the inferior gas traps.

These are among the reasons why AP is the world's largest manufacturer of replacement mufflers. Look for the big red and white AP "Free Muffler Check" sign the next time you need a replacement muffler. More than 100,000 automotive experts from coast to coast install AP mufflers and tail pipes.

[*Continued from page 45*]

● *Considering your weight, shouldn't you be taller?*

R. B. Arnold
Darien, Conn.

Yeah, about 26 feet.

● *Am considering buying a Judson blower for my 1959 VW which has 8,000 miles on it. I can't take all the Judson sales pitch nor the VW dealer's arguments against. It really takes an independent expert opinion these days to arrive at a decision. May I have yours, please?*

John A. Thoroughman
Chicago, Ill.

I just don't happen to like blowers on a car to be used every day. It's like hitting your arm with a coke needle to wake you up quick.

● *I bought a Labrador Retriever like yours last summer and would like to get somebody to train him so he'll make a good gun dog. How long will this take? Can you recommend a trainer?*

Harold F. Churchill
Pittsburgh, Pa.

To be trained as just "a good gun dog" might only take three or four months, if the dog is bright. If he's stupid, he may never make it. To be trained as a field trial dog will usually require at least two years. However, good trainers will ship him back to you quickly if they feel the dog hasn't got it. Two trainers I can recommend are Bud Hedges of Sag Harbor, Long Island, N. Y., or Orin Benson of Eagle, Wis.

● *Recently I bought an MG TD and it's fine in every respect except that the engine is just worn out? Any suggestions?*

Paul Waters
Buffalo, N. Y.

Sears, Roebuck lists '50-54 TD engines in their catalog. Price: About $250.

● *Would you accept the Democratic nomination in 1960 for president?*

A. G. Tulley
Oklahoma City, Okla.

President of *what*? The last nomination I accepted got me into a sorority.

● *Bet you can't top this. My husband and I have a new outboard cruiser and one day we went shopping for some equipment. He bought one of those life rafts that inflate immediately by pulling a little pin. We put it on the back seat of our VW alongside our little son Jerry, age six. Just as we got into some*

[*Continued on page 50*]

"The 1960 Plymouth is the performance king in its field . . .

it can drill through hard bends and switchbacks as adroitly as many top-rated sports cars,"

SAYS TOM McCAHILL of MECHANIX ILLUSTRATED.

One of America's best known automotive experts goes "flat out" in his praise for the Solid '60 Plymouth. Tom McCahill took a Fury 4-door hardtop equipped with the 361-cubic-inch, optional Golden Commando V-8 engine, and really put her through her paces.

According to "Uncle Tom," the Commando power plant ". . . can whizz out 0-60 mph in 8.2 seconds."

As this famous auto expert discovered, "The big payoff on a Plymouth comes when you put it on the road." But don't take his or anybody's word for it—*you* put a Plymouth on the road. Get her out on the roughest, toughest terrain you know. See if you share Tom McCahill's and our belief that the Solid Plymouth 1960 with new Dura-Quiet Unibody ". . . is the performance king in its field."

A Chrysler-engineered product, built a new solid way to give you solid satisfaction.

SOLID PLYMOUTH 1960

James G. Groendyk of Upper Saddle River, N. J., checks the mighty engine of his 1931 Duesenberg Convertible Roadster

"Quaker State protects the engine of my classic Duesenberg *and my new car too!*" This Duesenberg Model J boasted the most powerful engine of its day. Its huge 420 cu. in. straight 8 was rated at 265 h.p., and it was guaranteed to give 92 miles per hour—*in second gear*. Its condition today—better than new! Smart motorists rely on Quaker State Motor Oil. Refined only from 100% Pure Pennsylvania Grade Crude Oil, the world's finest, Quaker State assures complete, long-lasting protection.

Available most everywhere . . . always ask for Quaker State by name.

QUAKER STATE OIL REFINING CORP., OIL CITY, PA.

[Continued from page 48]

heavy traffic there was a large swoosh! and this balloon-like boat started filling up the entire car. We were forced to jam on the brakes right in the middle of the Freeway and jump out. Jerry was almost smothered. The cops arrived soon and one of the officers slashed the boat with a penknife, allowing it to deflate. We just missed getting a ticket, to boot.

Mrs. Henry Orr
Los Angeles, Calif.

That's pretty hard to top. The only thing I know that comes close happened to a pal of mine who owns a fireworks company. They were putting on a fancy display for a yacht club and one of his helpers phoned him at the office that he'd forgotten some of the equipment. My pal jammed a whole supply of pinwheels, aerial bombs, rockets, Roman candles, etc., in the back seat of his car and started off for the club, some 50 miles away. After a few miles he elected to toss a cigarette out the window—and didn't quite make it. Before you could count to One he was off the road and just managed to escape with his life as a private display of fireworks started on the parkway apron. All the windows and windshield were blown out and the upholstery was left non-existent. A passing patrol car equipped with a fire extinguisher is the only thing that prevented the complete ruin of his Oldsmobile. The only satisfaction he got out of this was that now he knows why they call it a Rocket 88.

● *In our science class we are holding a debate on the question of whether or not it is morally justifiable to conduct scientific experiments on living animals. Would you please give me your opinion on this subject?*

James A. Taft
Endwell, N. Y.

I happen to be strongly against vivisection—especially with dogs—as the animals are given no choice. What they do with humans is okay with me.

● *As an ardent reader of your hog-wash and as a true friend, I wish to warn you that some of your testing procedures are dangerous. You told of turning the Ford Falcon on a progressively faster and tighter circle. A friend of mine tried this once and he got going so fast and in such a tight circle that he finally drove right up his own exhaust pipe and disappeared. Hasn't been seen since.*

Carter W. Christensen
Los Angeles, Calif.

[Continued on page 52]

PONTIAC'S TEMPEST ENGINES ARE FULL-HOUSE

tiac for nineteen-sixty is a mighty full ciage for those with a highly trained sense r appreciation.

overs of true road machinery have been ing a field day admiring the great new pest power plants. Ranging from the nomy 215 horsepower model to the full-e 318 horsepower version, they're the t respected V-8's ever tucked under a enger car hood. Gear boxes to match. e ratios to suit.

nd listen. The noise boys have dampered sound down to where you'll swear they've insulated the *road*. Suspension improvements have also helped in this department . . . as well as in ride and handling.

These are the kinds of advances you expect from the team that created Wide-Track Wheel Design—greatest cure for "car-sickness" in an American passenger car. 'Nuff said? Go see! You'll learn in a quarter mile why people who know cars *best* respect Pontiac *most*.

PONTIAC MOTOR DIVISION · GENERAL MOTORS CORPORATION

PONTIAC THE ONLY CAR WITH WIDE-TRACK WHEELS

[Continued from page 50]

How do you think I lost my hair? Those pipes have sharp edges.

● *Here's one for the How-Cum Department. After seeing at Daytona that the T-birds have nearly replaced the common Fords, I couldn't help wondering how come Corvettes (in competition) can't come in for the Chevies? Surely there are enough in production to be a stock car and surely they can outperform the standard sedans. What, please, is the ruling on this?*

Eddie C. Hardman
U. S. N. S. Bermuda

The Corvette is rated as a "two-seater sports car" and the current four-passenger Thunderbird pases all the qualifications for a sedan rating.

● *As an avid hunter I'd like to know: What's the biggest thing you ever shot?*

E. T. Farmer
Louisville, Ky.

Eighteen hundred bucks at the races.

● *Is there any V8 made in America today that could be run flat-out (meaning foot flat to the floor) for a full 100 miles with causing any serious damage? Or would all them do it? I mean a car in absolute showroom condition but well broken-in three or four thousand miles on it.*

Jack L. Waterb
Seattle, Wash.

No high-performance car made in Ame could run as much as 20 miles in absolu stock condition really flat-out. Assuming the carburetor butterflies were fully ope nasty things would start to happen faster th I could get a haircut. One of the first th that would go would be the mufflers, wh would burn off like *papier mache*. Then engine would blow, because the stock c buretor jets that come with all American c are too small for continued flat-out runni the mixture would be so lean that the eng would fry to a cinder.

Recently, when Fireball Roberts set fastest stock car qualifying time on the Daytona Beach International Speedway at mph, he "breathed" his engine twice in of the major curves for 150 or more ya Breathing an engine means to take your f

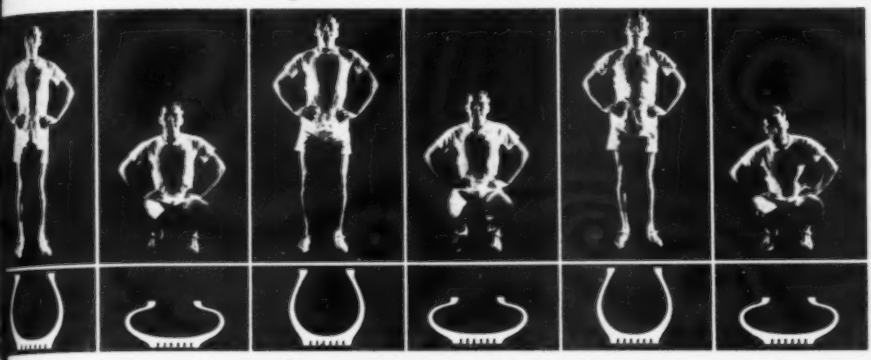
New KING MIDGET

15 Years continuous production—Thousands of proud, satisfied owners from Alaska to Equador. Many report 50 to 75 miles per gallon. Rear mounted air-cooled engine, smooth fully automatic transmission, four wheel hydraulic brakes. A safe and amazing small car you can own and drive at a fraction of the cost of any other. You owe it to yourself to get the surprising facts and prices. Buy it at the dealer price if no dealer near you. Rider Agents wanted. Send 25c for 32 page book, full details, dealers price, or $1 (refunded first order) for this plus Service and Repair Manual and 16 5x7 photos of car and factory.

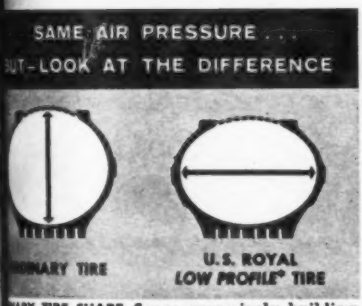
MIDGET MOTORS CORPORATION • ATHENS 3, OHIO

Too much flexing wears out people and tires...



The new *Low Profile* tire shape flexes less, reduces heat build-up, increases mileage!

THE TIRE THAT DOESN'T GET TIRED



ORDINARY TIRE SHAPE flexes excessively building intense heat that murders tires, pushes the temperature of ordinary tire above the crucial 7. danger zone. "LOW PROFILE" TIRE SHAPE temperatures well below danger zone. Run- hours at top highway speeds, U.S. Royal Profile" tires stay cooler, keep you far safer.

PIONEERED BY U.S. RUBBER AS THE ANSWER TO GREATER TIRE SAFETY

Takes regular air pressure . . . yet it's lower and wider to keep you safe at top highway speeds

Excessive flexing heats up a tire just the way it heats up *you!* And at today's highway speeds the torturing heat build-up wears out ordinary tires fast, increases blowout risk.

New U.S. Royal "Low Profile" tires were designed specifically to overcome this hazard. Though they take the same air pressure as ordinary tires, they're lower and wider to flex less, run cooler, wear better.

No need to risk tire failure. "Low Profile" tires cost no more than ordinary tires. See the *complete* line in 5 popular price ranges for every model car at your U.S. Royal Dealer.

U.S. ROYAL *LOW PROFILE** TIRES

United States Rubber
Rockefeller Center, New York 20, N.Y.

**"Low Profile" is U.S. Rubber Company's trademark for its lower, wider shape tire.*

[Continued from page 52]

off the gas for a couple of seconds. This does two things: raw gas is sucked into the cylinders, which cools the tops of the pistons and head. This same shut-off also causes an extreme internal vacuum which will actually suck oil up past the piston rings to give the engine an extra heavy dose of lubrication to prevent it from seizing. If Roberts hadn't breathed his engine there was an excellent chance he'd have blown it on one lap.

Under NASCAR rules Roberts was allowed to use larger jets than normal in his carburetor and run without mufflers. Despite this, he was forced to breathe his engine. This does not, however, apply to all engines—only the high-performance jobs. Some smaller engines are safe to run flat out for many miles, as their carburetor size is so small it's like running at three-quarter throttle even when wide open. Add to this the fact that they commonly have mild anti-high-rpm cams and a restricted ignition advance (which won't permit over-revving) and you have a lot of built-in safety factors. One of the secrets of the VW's longevity is the fact that it's so detuned in design that it's almost impossible to abuse it. This is true with a number of o low-performance engines. The hot though, can kill themselves with the a heavy foot applied too long.

● *Have been hearing and reading about "economy tests" and also about the one you made. What I want to k is: Are all economy tests on the up and or not?*

Fred R. Be
Norfolk, Va.

I have no way of knowing whether economy tests are "on the up and up" b believe they are, with maybe just a twist of misrepresentation in some ca know about. In other words, if some claims it went from Brooklyn to Boston a aging so many miles and tenths per ga the chances are it did. But *how* this achieved might be just cause for the forfei of their cricket bat.

For example, in one widely-publicized a year or so ago, the car actually made claimed mileage (the run was thoro

supervised by a recognized sanctioning body but left out of the ads was the fact that nearly all the driving was done at night when the traffic was at its lowest—and the average speed was actually a hair less than 30 mph for a trip of almost 3,000 miles! This type of economy publicity, though technically accurate, is reminiscent of the sharpie who says to the rube, "I'll bet you ten bucks I can jump higher than the Empire State Building." As soon as the money is down, the sharpie jumps six or seven inches off the ground and then says to his victim, "Okay, now let's see how high the Empire State Building can jump." Legally, the sharpie won the bet honestly but morally he's a cad, sir. Economy runs only begin to mean something when all the facts are published, such as average speed, time of day and driving conditions.

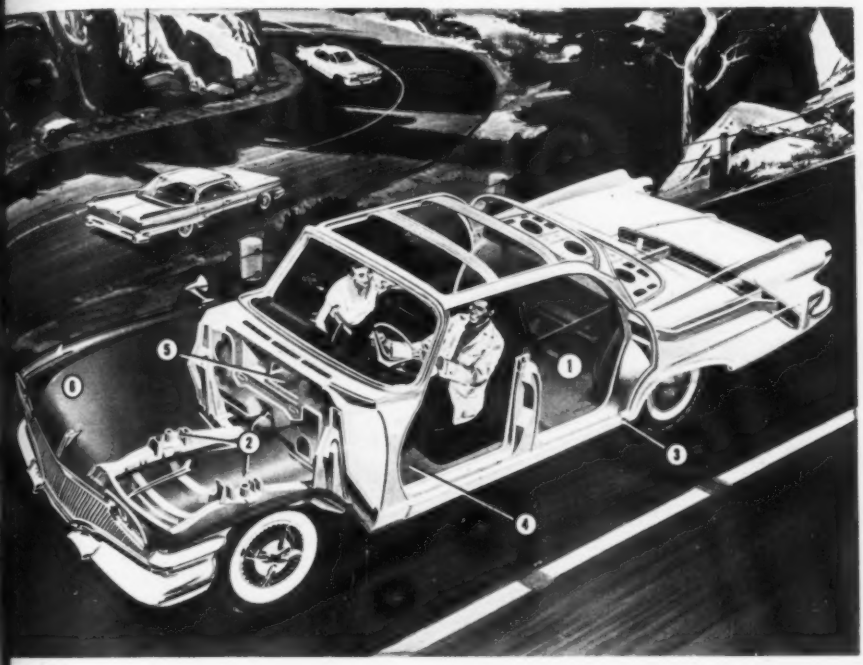
DON'T DO-ITS

Dodge Dart Is Sound-tight, Weather-tight, Built To Stay Tight!



...n many reasons why Dart rides and feels like it costs hundreds ...ars more than it really does. To build this new kind of low-priced Dodge engineers used a striking series of important advances ...wise available in the low-price field.

UNIBODY CONSTRUCTION—Dart eliminates conventional two-...body-frame construction. It's welded into a single unit with ...-strength. One-piece construction eliminates body squeaks and ... It's far stronger to begin with—and it stays that way.

THREE-FLIGHT POWER—New three-point suspension cradles ...in space—actually floats it on supple steel coils and rubber ... Sound and vibration are completely isolated from passengers.

SPECIAL WEATHER SEALING—All body seams and joints are ...ped to prevent leakage. Seams are further sealed with a special gun-applied mastic that stays pliable—won't dry out or crack with age.

4. NEW SOUND-DEADENING TECHNIQUES—Under hood, roof, and floor mats, heavy layers of special felt and rubber acoustical materials soak up road and wind noise. These sound deadeners are eight times as effective as the best of conventional sprayed-on materials.

5. SPECIAL SEALING FOR WIRES AND CONTROLS—Instead of punching separate holes in the firewall for entrance of control cables and wires, Dodge engineers routed major units through an ingenious self-sealing keyhole. There, special die-cut rubber blocks simultaneously position the wires and seal out drafts and noise.

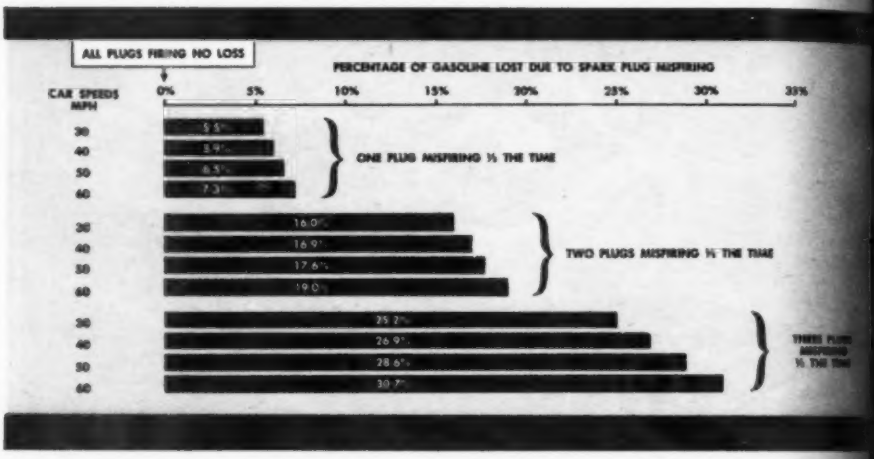
6. COMPLETE RUSTPROOFING INSIDE AND OUT—Every Dart Unibody is deep-dipped seven times in tenacious rust preventives. This deep-dipping completely seals every crack and seam, inside and out. Final finish is then added—two coats of special primer, two coats of lustrous, long-lasting Lustre-Bond baked enamel.

AMERICA'S FIRST FINE ECONOMY CAR **DODGE DART**

NOW DODGE BUILDS TWO GREAT CARS: DODGE DART • '60 DODGE

Look how much you lose when Spark Plugs misfire!

All spark plugs tend to misfire intermittently as they wear, and modern high horsepower engines make it difficult to tell when such misfiring occurs. But as the chart below shows, spark plugs that fire only part of the time waste gas by the gallon. For example, if your car gets 16 miles per gallon at 60 miles per hour, one misfiring spark plug can drop your mileage 7.3% to 14.8 – two can drop it 16.0% to 13 – three can drop it to 30.7% to less than 12. You lose mileage at all speeds, and the higher the speed, the greater the loss.



To get the best mileage from your car, replace your spark plugs at least every 10,000 miles with new ACs. AC Fire-Ring Spark Plugs will pay for themselves through the improved mileage you'll get. ACs have such mileage-producing features as exclusive leakproof conducting seal center electrode bond for uniform heat range, and superior Buttress Top insulator for greatest resistance to electrical flashover leakage. These plus many other advancements have kept AC in the forefront of spark plug development for 52 years. See your dealer, ask for ACs — and save.

EJECTION of pod is triggered by crew member inside it. Bulkhead and door are airtight.

ESCAPE PODS CAN PREVENT NEEDLESS AIR-CRASH DEATHS!

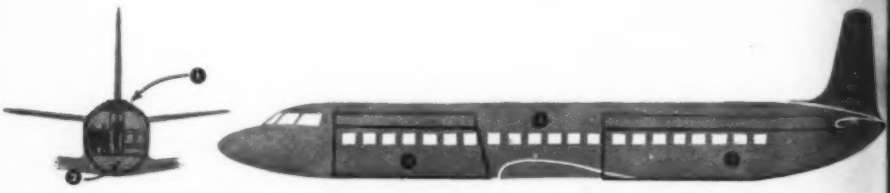
By Robert G. Beason

DECEMBER 22, 1959: Twenty-five passengers and six crew members on a Brazilian airliner are killed after their plane is rammed by an Air Force trainer over Rio de Janeiro. There is just one survivor—the military pilot.

The story of the tragedy was familiar. Three times in as many years commercial planes carried all aboard to death after such mid-air collisions. In each case one person survived—the military flier who parachuted to safety from his crippled plane after the crash occurred.

A box score for the four crashes shows: Airliners—77 killed. Military planes—4 saved.

In 1959 we recorded the worst airline safety record in history, with more accidents and more fatalities than ever before. Today the special horror of mid-air collision, no longer a freak, is a major danger to every air traveler from hotshot jet jockey to the tired salesman returning home.



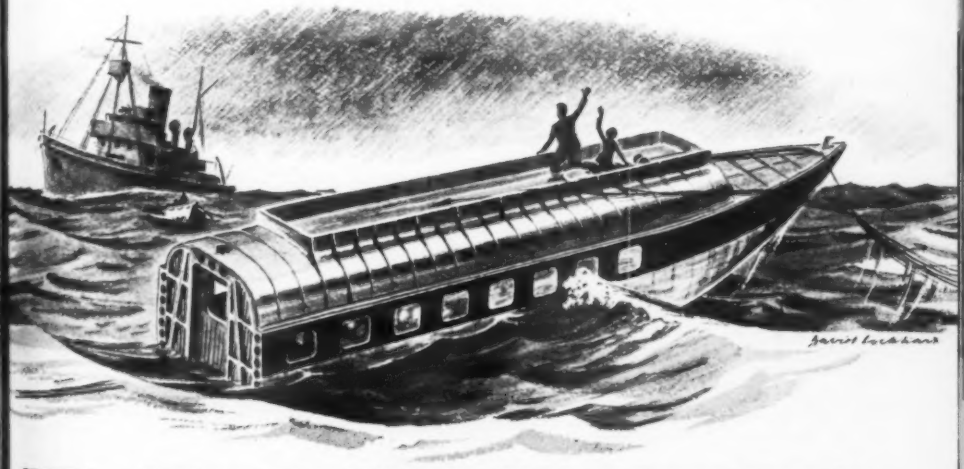
1. PARACHUTE RACK atop pod. 2. Belly compartment holds freight, ballast weights, pneumatic shock absorbers. 3. Forward pod. 4. Galley, washroom, luggage. 5. After pod.

RESCUERS will be aided in their search for survivors by parachutes' vivid color.

Mid-air accidents are one of the few types which should offer some chance of escape. But the odds after a collision favor the military flier. He has a parachute. Airline passengers and crewmen do not.

Why can't airline passengers have a second chance, too?

Aboard ocean liners we find lifeboats. On military planes the use of parachutes is nearly universal. Yet aboard commercial [*Continued on page* 166]

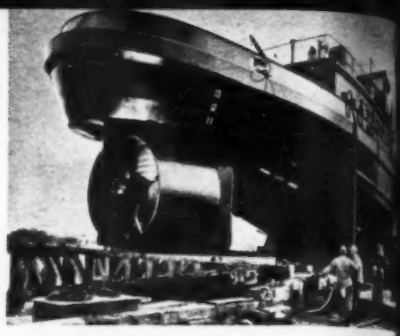


AT SEA the pod makes an enclosed lifeboat. One of the chutes will serve as a sea anchor.

NOW SEE THIS!

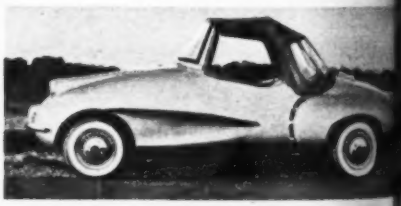
90MM RIFLE, recoilless, gives infantryman the close-range punch of medium-size tank gun. Designed to be carried into battle and employed by a team of two men, the 35-pound, four-foot weapon can be carried and fired, in emergency, by one man. It fires a shell which can penetrate the heaviest known armor. Its effective range is 500 yards—twice that of 3.5 bazooka. The rifle is fired from shoulder, as shown.

DENTAL TV developed by Avco Corp. under Naval sponsorship uses camera probe to pick up image that appears, many times enlarged, on screen. Probe is cable containing up to 10,000 hair-like, light-transmitting fibers with fingertip-size lens on probe end and coupled to camera on other end. The device may be adapted later for medical probes inside the body. Besides giving medics a convenient view of hard-to-see areas for consultations, this closed circuit TV will be very useful for medical lectures. Light-conducting fibers can also carry light safely into the body cavities for viewing.



NEW TUGBOAT built by Dravo Corp., Wilmington, Dela., has Kort nozzle—a tunnel enclosing its propeller to give extra push. After rudder steers forward, twin rudders before nozzle steer in reverse. Dalzell Towing, New York, has chartered the boat.

NEW HYDROPLANE designed and built by Marine Research, Inc., Bay City, Mich., rides high in water although she weighs over 11,000 pounds. Her owner, Precision Scientific Company, Chicago, Ill., will use her as a high-speed lab in which to test marine materials. Props and rudders of new design will also be put to the test.



SUPER JET V2N, designed and built in France by l'Union Industrielle, is billed by its backers as "the cheapest and most practical sports car in the world." The price is expected to be about $1,400 here. It tops out at 70 mph, gets 64 mpg in long-haul driving. Glass fiber body took crash at 35 mph into concrete wall without a dent. Air-cooled, single-cylinder mill is at rear.

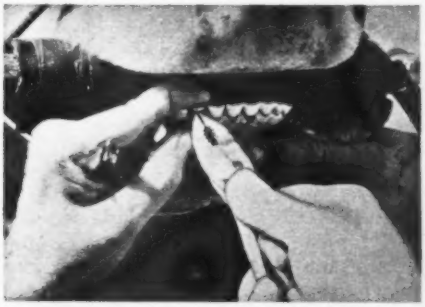
MONEY MAKING IDEA

STEEL CROWNS FOR COWS' TEETH

CROWNS of stainless steel are now being used to save cows from being made into hamburger. The eight vital lower front teeth necessary for eating and drinking usually erode by abrasion in five years and it's "Goodbye, Bossie." Now Bovine Crowns, Inc., Sedgwick, Colo., preserves these teeth with crowns that fit over them. Total cost: $15 to $20. Time required to crown one cow by an experienced veterinarian is about ten minutes.

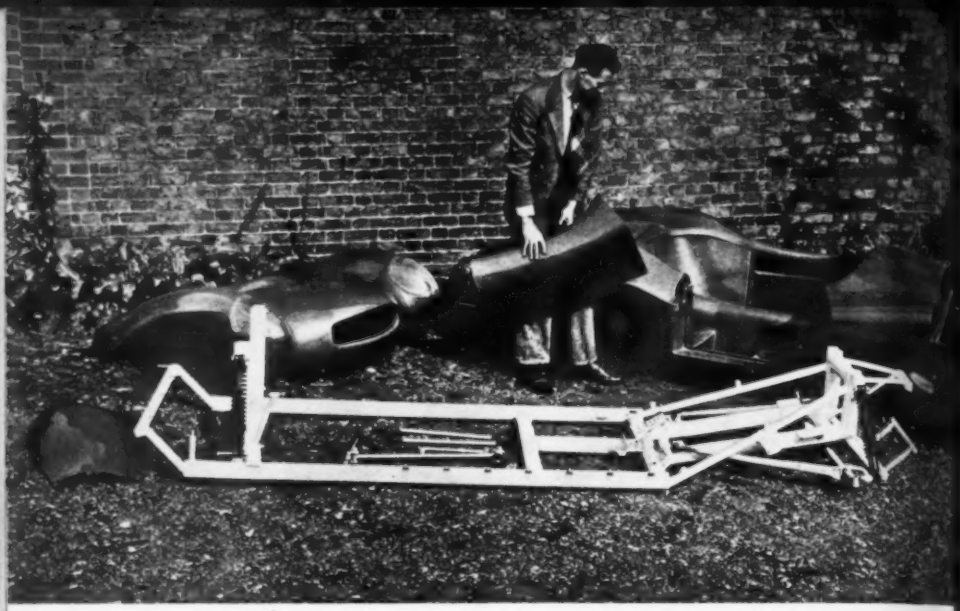
Dr. Ward C. Newcomb, dentist of Chappell, Neb., is the man who devised the stainless steel crowns for cows. There are now ten sizes in crowns and they must fit snugly over each tooth. They'll add years to cud-chewers everywhere, meaning better breeding stock for cattlemen.—*Pearl P. Puckett*

BOSSIE'S lower front teeth, vital to her eating and drinking, are ready for crowns.



CROWN has cement in it, fits over individual teeth, is then crimped with pliers.

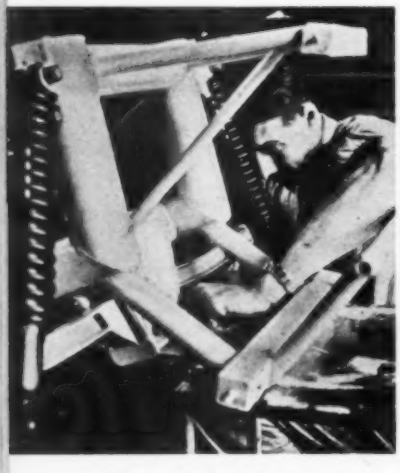
SECOND crimp folds in excess material along front of each tooth. Above, third crimp forces cement around each tooth. Crowns won't erode or tarnish. New set of falsies is shown, right.



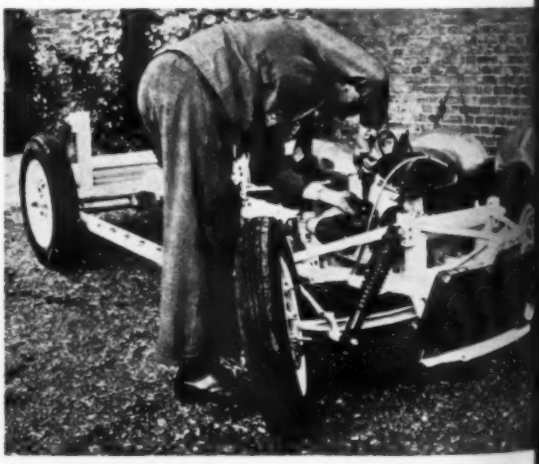
CAR KIT body and chassis as they come out of the package. Chassis costs $206, body $364.

BUILD-YOUR-OWN CAR

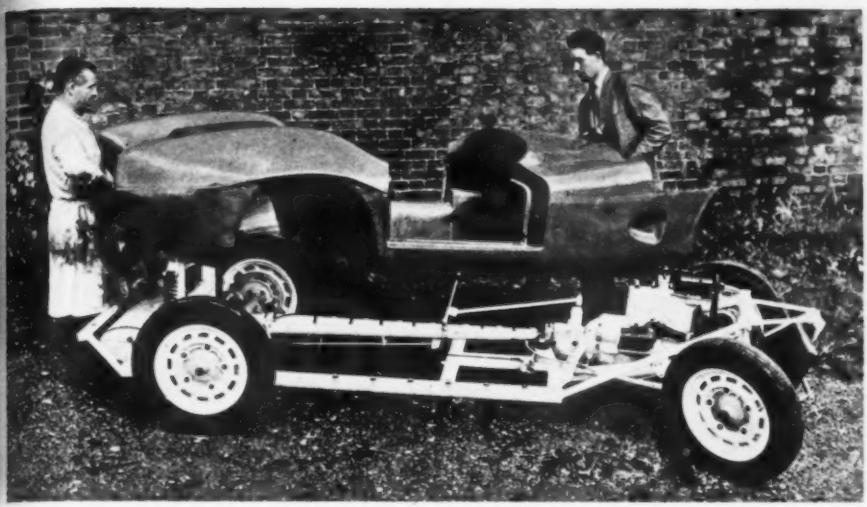
OVER in Blighty the growing demand for a sporting rig that won't cut too deeply into the owner's shillings and pence has resulted in a number of you-build-it car kits. A very classy example is the Typhoon. Designed and built by a very new corporation, Tornado Cars, Ltd., the Typhoon is a chassis-and-body



FRONT SUSPENSION units are independent. Independent owner puts them in Typhoon himself.



DYNAMO gets a finishing touch. Kit comes with all necessary brackets for Ford radiator, engine, gear box, steering column, steering box and gasoline tank.

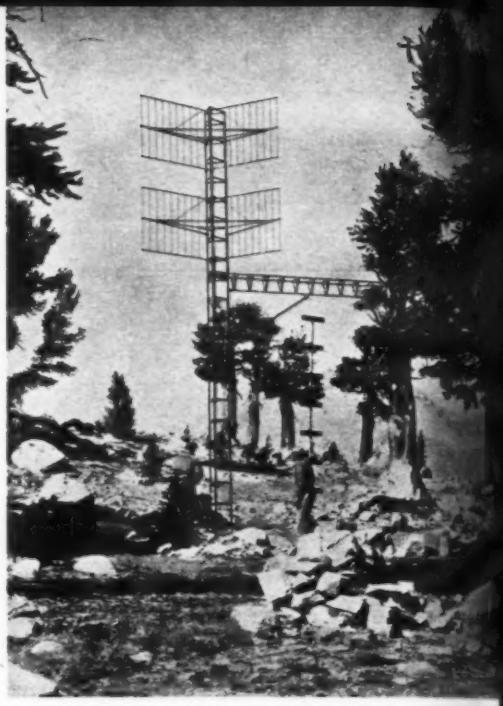


A HAND WITH THE BODY is the only help kit builder will need with the job, says maker.

kit job that goes with standard English Ford parts. The Ford parts should cost about $85, the kit $570 and you will need some extras such as tools and Band-Aids. The body is laminated glass fiber and is styled just right for men who like Limey looks with somewhat swash-buckling overtones—a bit of the old Allard or D Jaguar. Without overstatement, the maker claims the Typhoon has been pitted against a late-model sports car and more than held its own. •

STYLE, BUT WILD—and plenty of it for your 250-quid ($700 in U. S. money) expenditure.

ELECTRONIC SNOW GAUGE



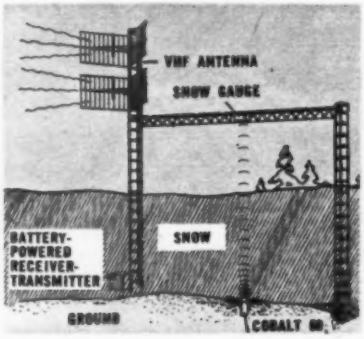
TOWERS must be at least 20 ft. tall to clear snow that may almost reach crossbeam. Gauges are unattended nine months of year.

ELECTRONIC snow gauges in the High Sierras of California and the Bitterroot Mountain Range of Idaho now measure the water content of snow fields for hydrologists.

The system consists of a 20-ft. H-frame tower at each of the three snow gauge sites, and two relay towers, all in remote areas. In addition, there is a terminal tower at the Isabella, Calif. base station. Each gauge site has a radiation detector, VHF transmitter, receiver, battery and control unit.

A small radioactive cobalt 60 capsule imbedded in the ground beneath each H-frame tower emits radiation through the snow to a detector anchored on the tower which beams to the base station the water content of the snow field.

The U. S. Army Corps of Engineers and the Sirra Electronic Corp. of Menlo Park, Calif., developed electronic snow gauges which will eventually be converted to report weather conditions.



SNOW GAUGE diagram shows equipment used to relay density of snow to base station.

CANNISTER with radioactive cobalt 60 goes into concrete receptacle at ground level.

IT'S NEW

RED PLASTIC ROOF sheds a lurid glow in the cabin of this unusually styled automobile, which was shown recently in Paris. Car is a young designer's variation on the 2CV Citroen.

BIRDIES GO BYE-BYE with Ruth Berger, kindly and inventive New York budgie fancier who designed carriage so she could air her pets. Dutch firm manufactures it.

WRIST RADIO KIT, British, can be put together in two hours. Reception is called "surprisingly good"—depending on what is expected. Battery-powered, transistorized.

ELECTROWRITER transmits handwritten messages in the handwriting of the sender. For inter-office or cross-country use. The sending and receiving units are shown here.

RING-ME-UP LIST snaps out of ring on fair Briton's finger. An adaptation of an old idea, the ring can be used, like old-time poisoner's, to carry emergency pills.

THREE-WHEELER French midget car, the OTI 125, is a two-seater, plastic-bodied, weighing 350 lbs.—which makes it heavy to carry upstairs. It tops out at 40 mph, claims 60 mpg.

BRIDGE CURTAIN being tried out in a New York club hides partners from each other so they can't see unintentional signals—nor intentional ones. For tournament play.

LOOK—NO WINGS. Plane-style iceboat belonging to Gailen Fox, Fontana, Wis., is powered by reject 65-hp Continental mill. It does 100 mph, takes skis for snow-going.

LOOK—NO BOAT. Achim Wohlfeil of Offenbach, Germany, shows off model powercraft that won him European model speed title in 2.5 cc class at red-hot 41.22 mph.

POWERED CATAMARAN, built entirely of aluminum by Mitchell Boat Co., Elkhart, Ind., proved exceptionally smooth-riding. Experimental, not for production.

FOUR-STEP delivery begins with right foot.

SECOND left-foot step is longer, ball begins rearward swing.

BALL reaches top of backswing on third step with right foot.

A Champion Tells You . . .

HOW TO IMPROVE YOUR BOWLING

By BUZZ FAZIO
As told to James Winchester

EVERYBODY can't be a big-league bowling champion. A slim one-tenth of one per cent of the nation's 20,000,000 bowlers boast a 200 average or better. Less than five per cent average better than 180 and another five per cent have less than a 125 average. It's in the 150 to 160 range that most bowlers find themselves and it's not a bad range, for you can hold your own in most leagues in this scoring belt.

If you're going to be a good bowler you should invest in a comfortable pair of shoes. You should practice often. It's better to bowl one game every day than to roll ten games at a clip. Get off on the right foot by hiring an instructor. Don't try to teach yourself. Many bowling emporiums even provide free instructions for would-be keglers.

You should own your own ball, one that is

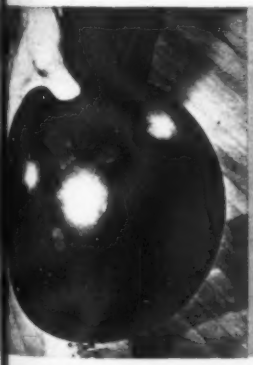
BUZZ FAZIO was captain of the '59 National Team Champions in the American Bowling Congress competition. A top member of Brunswick-Balke-Collender's bowling advisory staff, he's been twice co-winner of the ABC National Doubles title, ABC Masters Champion and five times a member of the Bowler's Journal All-American team. Buzz thrives on competition and is noted for his clutch bowling. He was born in 1908, started bowling in 1931, lives in East Detroit, Mich.

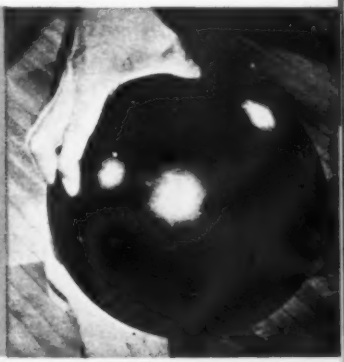
FOURTH step with left foot is longest one in delivery. It brings you to foul line in a graceful slide. Ball is away. FOLLOW through with arm when ball is on the way.

fitted to your grip. If you're a novice, choose a three-finger ball. Two-finger balls require a stronger grip. Finger holes should be big enough to let your fingers and thumb slide out easily but not so large that you can wiggle your fingers in them.

A 14-pound or the more commonly used 16-pound ball is easier to hold and feels lighter if you keep your elbows in at your sides and hold the ball at chest-level, rather than having the forearms straight out and parallel to the floor.

Where to stand and how far behind the foul line to start your steps are important in working to boost your score. If you're a right-handed bowler—and nearly everyone is—put your left foot in the center [*Continued on page* 164]



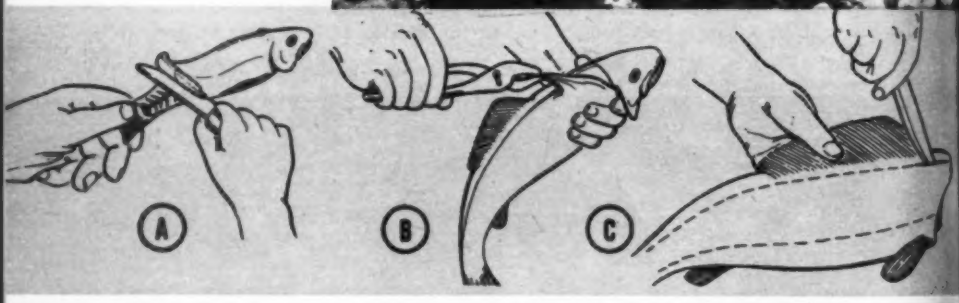


HOOK. Ball breaks to the left before it hits pins. STRAIGHT ball. Deliver with thumb on top, fingers under ball. CURVE. Thumb should be in a nine o'clock position.

Hunting and Fishing

Tips on Cleaning and Cooking Fish

By Wynn Davis



KNOW-HOW of (A) boning, (B) skinning, (C) filleting—all explained in text.

THE best-tasting fish are those you catch yourself—providing you know how to clean and cook them. All fish, but especially trout and salmon, should be cleaned as soon as caught. Fish have powerful digestive juices in their innards that begin to seep through the flesh as soon as the fish dies. This gives the flesh a strong "fishy" taste and softens the flesh—one reason why market fish never taste really good to the [*Continued on page* 159]

By Lawrence Sanders

IT wasn't too many years ago that the average American home-owner considered himself the cat's pajamas if he could boast of a battery in his Marmon, two more in his Atwater-Kent radio, a couple of leaky cells in the house flashlight and maybe two No. 6 dry cells working his front door buzzer.

Today, his gadget-happy son wakes to music from a battery-powered clock radio. He shaves with a battery-powered razor, burnishes his teeth with a battery-powered toothbrush, cuts his claws with a battery-powered nail trimmer.

His battery-equipped car has a battery-equipped radio that doubles as a portable. His office desk is furnished with a battery-powered pencil sharpener, battery-powered telephone amplifier and battery-powered swizzle stick—in case he feels the need for a mid-afternoon pick-me-up.

And so to bed, after a quick rubdown with a

POWERED swizzle stick is for those lazy drinkers $2.98.

battery-powered massager. If insomnia defeats him, he can always play a sleep record on his battery-powered phonograph or while away the wee hours with a battery-powered pinball machine. If he should snore while snoozing, his wife can buzz him awake with a battery-powered gadget called, appropriately enough, Turn-Over-Darling.

These are just a few of the thousands of portable power packages in use today. No one has yet come up with a battery-powered electric chair (not enough demand)—but practically everything else we use or enjoy has been given added convenience and portability by The Great Battery Revolution. Manufacturers, who are understandably cheered by this state of affairs, estimate that last year the total sales value of dry batteries alone ran close to $150,000,000.

Workhorse of this battery bonanza is the familiar dry cell in the AA, C, D and No. 6 sizes. At the risk of shattering one of your most cherished illusions, we must tell you that the dry cell is not *really* dry. If you're old enough to vote you'll remember how flashlight batteries of 25 years ago leaked an oozy paste that usually stuck to the inside of the flashlight. The leaky battery is no longer with us but that paste is still there, contained within a leak-proof can.

Briefly, the dry cell is a small cylinder of zinc which not only contains the other chemicals but also serves as a negative electrode. In the center of the little can is a carbon post with a metal cap. This is the positive electrode and also conducts the current to the outside circuit.

Between the zinc and the carbon is an electrolyte paste filler, usually con-

taining sal ammoniac and zinc chloride as its active ingredients. The electrolyte works on the zinc, releasing electrons to the center post. Unfortunately, it also releases hydrogen atoms which coat the center post. As the positive electrode becomes coated with hydrogen, the cell becomes polarized and its electrical output drops.

To prevent this, a depolarizing mix containing manganese dioxide is packed between the electrolyte paste and the carbon electrode. Oxygen atoms in the depolarizing mix combine with the hydrogen atoms to form water, depolarize the cell and prolong its useful existence. All clear?

Incidental intelligence: All batteries are DC only. A single unit in a battery is called a cell. A cell rarely provides more than 1.5 volts. Batteries provide higher voltages when cells are connected in series. A No. 6 dry cell is so called because it's six inches high. A

dry cell is a *primary* battery, generating electricity by chemical action. *Secondary* (storage) batteries are charged with electricity before they can deliver it. The dry cell developed from the first crude battery devised by Alessandro Volta in 1800. For his ingenuity, a unit of electricity was named after Volta—and if you think it's the ampere you just haven't been paying attention.

Earliest commercial dry cells were used to operate door bells and buzzers. The bell-ringing transformer took over this job. Then dry cells were used in the ignition systems of cars, boats and tractors—only to disappear when the magneto was developed. The dry cell then drew the assignment of running the early radios. This task, too, was eliminated when power radios came into popularity. Dry cells have even lost out in portable radios since the development of "Mini-Max" and "Wafer Cell" batteries (which are greatly miniaturized dry cells).

But in spite of these defeats by more efficient devices, dry cells are flourishing today as never before. Inventors are using them to power every conceivable kind of inexpensive and portable device, and the development of the transistor has increased their use in products that would ordinarily require a stronger power source.

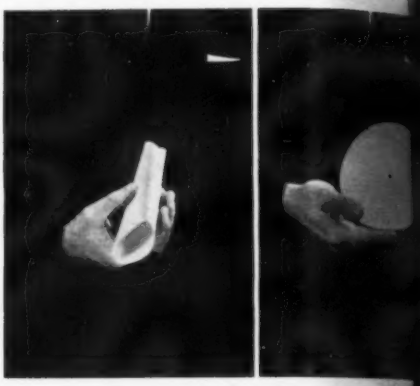
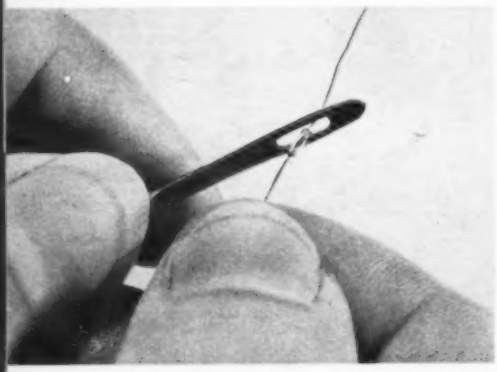
RUSSIAN surgical stapling machine is used to tie off major blood vessels of the heart and lungs and to stitch sections of the heart. Machine inserts staples made of vitallium, a chemically inert metal, as substitute for hand suturing. Stapler was given to Maimonides Hospital, Brooklyn, N. Y., by the Soviet Institute of Chest Surgery.



PLIABLE, unbreakable high fidelity records of plastic can be rolled in a mailing tube or inserted in cereal boxes, books and magazines. The novel platters will be made with basic seven-inch diameter in 33, 45 and 78 rpm size. Records weigh ⅛th of an ounce, will sell for about five cents each. Rank Audio Plastics, New York, N. Y.



MITE-T-LITE incandescent lamp is so tiny it can pass through the eye of a darning needle. The new microminiature lamp now being produced by Sylvania Lighting Products has a filament less than one-tenth the diameter of a human hair and can be seen in a normally illuminated room. It is the smallest incandescent lamp ever made.

GAL-TOTING Model 60 Buckboard has three-hp, four-cycle gasoline engine. The rig is 78 inches long, has neutral, forward and reverse, mechanical brakes, pneumatic tubes and tires. Vehicle is not intended for highway use but will travel up to 15 mph. Price is approximately $250. McDonough Power Equipment, Inc., McDonough, Ga.

MIMI

"CUDDLE up in here," says our cuddly product tester, "and even at 25 below zero you just won't care what goes on outside." MIMI's facts are backed by scientific tests of this Acrilan-filled nylon sleeping bag that were conducted on Mt. Washington. Acrilan replaces down filling for the first time in this bag; the manufacturer says it's cheaper, mildew-proof and warm. Called the Conqueror, this 3½-lb. bag is made by GIC Sporting Goods, 141 E. 44th St., New York 16, N. Y., sells for $25. Air mattress is optional.

CRIME laboratory boss Sirchie and some of his company's scientific crook-catching kits.

SHERLOCKS OF THE LAB

MANY a crook is probably sitting in his cell right now, staring at his Chinese checker board and silently cursing the Sirchie Fingerprint Laboratories in Camden, N. J. The reason would be Francis J. Sirchie, 53, who has been active in crime detection for 30 years, especially in developing new methods for catching thieves.

Since 1930 Sirchie has been supplying law enforcement agencies, including the FBI and Scotland Yard, with various detection kits. These include many types of ultraviolet detection powders which can be "read" under black light, fingerprint cameras, lie detectors, a variety of electronic booby traps, trick wall paintings and expensive homicide kits which include just about every modern piece of detection equipment that can be used for the apprehension of criminals at the scene of the crime.

The majority of Sirchie's equipment is confidential and cannot be purchased by any person not connected with a legitimate law enforcement agency.

It's tough to be a crook these days—you're lost without a Ph.D. •

ULTRAVIOLET invisible detection powder painted on door knob, left, proved maid had been stealing from employer. Maid's hands glowed under black light as pictured at right.

PORTABLE lie detector clamps only to the forefingers and is simple unit to operate.

CAMERA in cigarette lighter films ledger information of a firm under investigation.

MECHANICAL TESTS

The VALIANT

Looks, horsepower and speed make the new Valiant the top dog in the compact field, in Tom's opinion.

VALIANT looks as though it should cost several hundred dollars more than its closest competitors, reports Tom.

SPORTY aluminum grille of Valiant is slightly recessed, gives car a hefty look. Tail treatment is simple with canted, oval taillights, simulated wheel cover on trunk lid.

By Tom McCahill

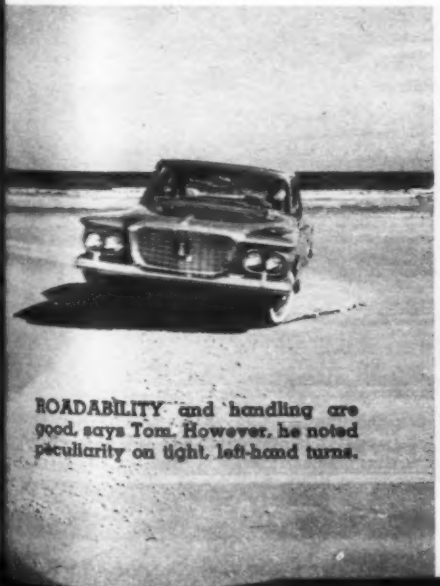
I NEVER owned a really good dictionary but even my $1.98 Drugstore Special has a lot to say about the word "valiant." It can mean "vigorous and robust . . . stouthearted and brave" . . . or just plain everyday "heroic." So you can imagine the embarrassment the guy who thought up the name for Chrysler's new compact car would have suffered if it had turned out to be a real pig. Fortunately for the Chrysler Corp., they wound up with a late entry that is the best of the new compacts.

The 1960 Valiant has more horsepower, more performance, more looks, more size and more price than its two closest rivals, Corvair and Falcon. Price-wise, however, a $100 bill will just about cover the spread of the three. Whether you consider the Valiant a giant small car or a pigmy big car is a matter for you to decide. It is nine inches longer than a Studebaker Lark and about an inch narrower. It is also longer than the Falcon or Corvair, which are both five to six inches longer than the Studebaker Lark. By some odd quirk, many people think the Lark is a bigger car than the new compacts of the Big Three. Actually, a car's size should be judged by wheelbase and tread. In this department, all the small cars (which includes Rambler as well) are so close that the differences aren't worth exploring.

Without booting this folderol around any longer, let's roll the facts on the table and consider the Valiant for what it is, compared to its competitors. Despite any claims based on the performance of hopped-up factory entries, of all the compacts available *to you* in the nation's showrooms, the Valiant is the fastest by ten to 14 miles an hour. On Daytona's famous Measured Mile, where I tested the Valiant, it averaged 98.3 mph, which is a good 13-plus miles per hour faster than either the standard Corvair or Falcon. Now, you don't get this performance for nothing. Both the Corvair and Falcon will whip the Valiant in an economy run, all things being equal.

In my opinion, the Valiant also beats the others in looks. To me, it looks as though it should cost several hundred dollars more than its two closest competitors. The Valiant sports a six-cylinder, tilted, in-line engine which unravels better than 100 horsepower. "Then," you may ask, "*is* the Valiant the Perfect Small Car?" My answer to that would have to be, "It's the best of the compacts but quite a ways from being perfect."

Let's see where this top dog in the small car field falls down. To begin with,



ROADABILITY and handling are good, says Tom. However, he noted peculiarity on tight, left-hand turns.

TEST CAR SPECS

MODEL TESTED: **Valiant 200 four-door sedan**

ENGINE: **6** cyls; **170** cubic ins; **101** brake hp; **155** ft-lbs max torque; **8.5** to **1** compression ratio. Bore **3.40** ins; stroke **3.12** ins. Fuel required: **Regular.** Standard axle ratio: **3.55.** Wheelbase **106.5** ins; length **184** ins; height **54** ins; width **70.4** ins; front tread **56** ins; rear tread **55.5** ins. Weight **2,735** lbs. Gas tank capacity **13** gals. Turning circle diameter **37.1** ft. Tire size **6.50X13.**

PRICE (without optionals): **$1,946**

PERFORMANCE: **0-30** mph, **4** secs; **0-60** mph, **13.4** secs. Top speed **98** mph. All times recorded on corrected speedometer.

VALIANT SUBURBAN four-door wagon is 185 inches long with 106.5-inch wheelbase.

the upholstery will never give you the idea that they've kidnapped any of W. & J. Sloane's craftsmen. It's good, serviceable stuff—but then, so is the upholstery on a subway seat. The headlining looks as if it were whipped up on Mother Sill's loom. The glove compartment is just about the right size for carrying two walnuts, not three. The instruments are pretty good, except for one idiot light instead of an oil gauge.

Handling-wise, the Valiant has an interesting peculiarity which *is* pretty unusual. The six-cylinder engine, in the best race car tradition, is mounted at a 30° angle from straight up and down, in order to accomplish a lower hoodline. In the Valiant, the engine is slanted to the right (from the driver's position), which plays some odd tricks with the car's balance when cornering. As most all regular readers of this test series must know, I believe Chrysler products have the finest suspension being offered in America and are the best road cars because of this. Now, this Chrysler torsion-bar suspension has also been built into the Valiant. However, because the engine is mounted off-center to the right, the characteristics when you make a hard right turn are quite different from those when you make a hard left turn.

When I first drilled this Valiant over the Daytona International Speedway sports car course, I found it the best-handling American car I've ever driven through a tight turn—while bending to the *right*. When I hit a tight curve going to the *left*, I experienced a very deep plowing effect. Later, in making circling tests on the beach, I found that in left turns I could almost spin the Valiant on its nose in its own length. This is something the average driver might never notice, even on several trips from coast to coast. But on a tough mountain road, if he descends too fast, he'll definitely feel the difference.

This condition isn't dangerous but it is interesting [*Continued on page* 157]

ENGINE is water-cooled in-line six, inclined 30°. It gives car 98-mph top speed.

IRONING BOARD with an insulated, built-in case to hold hot iron, prevent kids from getting burned. Tom E. Curtis, Temple, Pa.

JACK with wheels for heavy appliances. Toe pedal would lower wheels to move appliances to clean. Mrs. C. Wray, Cullman, Ala.

VACUUM BROOM for kitchen use would enable mother to pick up the crumbs quickly and easily. Mrs. Paul J. Mizwa, Oil City, Pa.

INVENTIONS WANTED!

was once owned by R. E. Olds. I wondered what the old boy would have thought of this full-powered luxury barge I was driving, complete with two-speaker radio and the fuzzy baritone erupting therefrom (a hardship R. E. Olds never had to endure).

I was headed for the Daytona International Speedway to do a little serious testing. Once there, it didn't take very long to determine that this car, the Super 88 sports sedan, delivered more eye-popping performance than Jayne Mansfield. It can top 115 mph and bat out 0-60 mph in 8.7 seconds. It jumps from 40-60 mph in 4.1 seconds and I was impressed with its solid mid-range guts, or should I say torque.

The ride over bumpy, rutted roads was as soft as a prizefighter's nose. But to accomplish this, some sacrifices were made in suspension stiffness. When I took the Super 88 around the sports car course at the Daytona track, I found it as well-cast for the job as Frank Sinatra doing the Life Of Sidney Greenstreet. Around the first bend, which sports cars take at 70 mph (and some American cars at 60 mph), I shot into orbit and lost the car completely at a hair over 50 mph. I tried this bend four times and was off the road like a singed rabbit on each occasion. If I owned an Olds Super 88 the very first thing I'd do would be to take it to the nearest shop specializing in heavy-duty shock absorbers and tell them to "tie this balloon to the ground." I might even add a couple of Air-Lifts, or try to get heavy-duty springs from the dealer.

In a high-speed emergency the difference between a car with which you can thread the eye of a needle and one that will slop on you can be extremely important. If you want a forinstance, here's one that happened to me less than two weeks ago. I was heading south through North Carolina, doing about 60 mph. A guy in a little old car was creeping along ahead of me with one wheel in the gutter. I pulled toward the center of the road to pass him. Suddenly, without any signal whatsoever, this character made a hard left turn directly across my path. My car was loaded to the [*Continued on page* 168]

TEST CAR SPECS

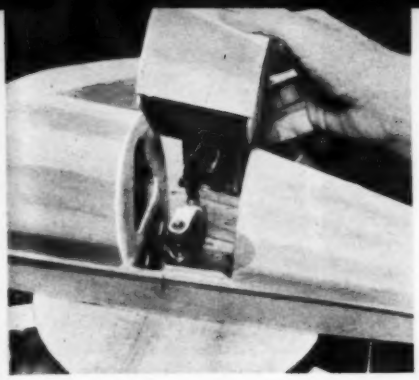
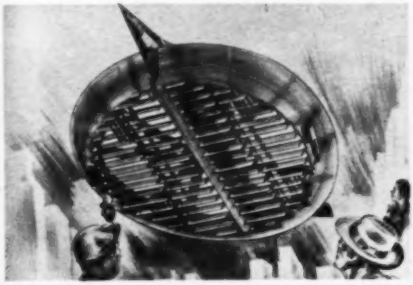
BIG, luxurious and full-powered Olds has well-appointed interior, says Uncle Tom.

SOFTNESS of suspension was noted by Tom who suggests heavy-duty shock absorbers.



UNIVERSAL joint on top of model allows plane to maneuver on end of a steel rod.



DRAWING of full-size XR-62 shows the louvers open as the craft is ascending.

FLYING FLIVVER

XR-62 is the name of a new "flying flivver" devised by Ben Kaufman, president of the engineering firm of Rotavion, Inc., Santa Monica, Calif. The small utility craft is both lifted and propelled by two counter-rotating rotors within the wing. Novel Venetian blind-like louvers enable the craft to ascend, descend or hover. The spinproof flivver can land safely even if the engine conks out, it is claimed. A prototype will be flown sometime this year. It will have a 200-mph top, 165-mph cruising speed with a 180-hp Lycoming engine. Kaufman eventually hopes to price his craft at about $10,000. •

INVENTOR Kaufman and flying model. Buckets on rim supported by rotors scoop air from the edge of the wing and force it out tail, giving forward motion. Model is powered by ⅙-hp electric drill.

PORTABLE FISHING BOAT

OARLOCKS are permanently attached with tire casing patches; the seat folds flat.

Use this inexpensive one-man boat for deepwater fly casting, drift fishing, trolling or just to reach an island in the lake.

By Mees Trussell

IF you enjoy fishing, chances are you've often stood on the edge of a small lake, watching the fish jump and gnashing your teeth because they weren't jumping near shore. Or perhaps you've wished you could ferry the family to an inviting island for a picnic. After many such experiences, we decided a converted one-man life raft

would be an inexpensive answer to both problems.

The surplus raft, equipped with oars and a plywood seat, can be folded into a knapsack (see insert photo at top) or stowed in the trunk of the car. The pack weighs only 11 pounds, yet the raft easily supports a 250-pound load in the water. It's so light that when we want to get to an island we attach a fly line, pay it out while one person rows across and reel it back for the next passenger!

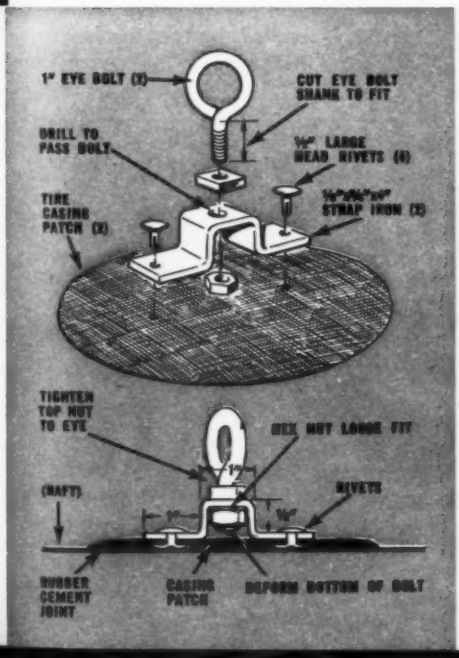
Rowing the original raft was difficult because the oars had to be tied to straps and they moved awkwardly. Then too, there wasn't sufficient back support for short people and they tired easily. Both these faults are corrected by the illustrated oarlocks and the plywood seat. The addition of a cushion insulates the seat and makes it quite comfortable.

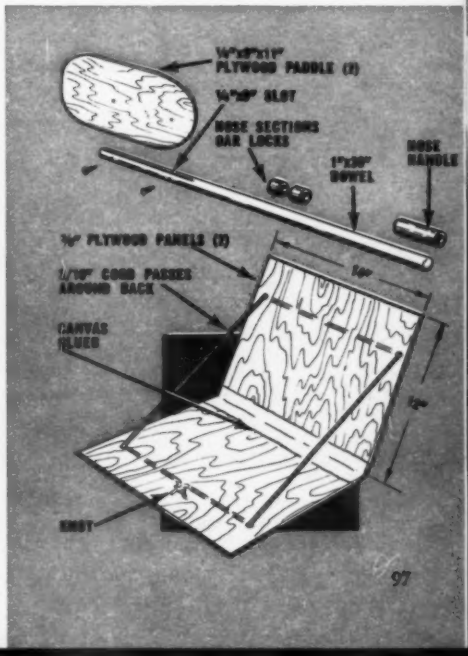
To make the oarlocks, it's necessary to drill and bend two lengths of ⅛-inch strap iron as indicated and then attach the eyebolts, using two nuts. The nuts, however, should not be made tight because the eyebolts must turn freely. The shank of each eyebolt is then shortened and peened on the end to hold the nuts in place. Then each assembly is riveted to a tire casing patch.

The oarlocks are placed where they will provide the most ease in rowing. Inflate the raft, sit in it and experiment to determine the best position. Then mark the area where each patch will be and roughen the surface with sandpaper. Next apply rubber cement, remove the protective backing from the tire casing patches and press them in place.

The oars are easy to make from two 36-inch lengths of one-inch hardwood dowel and two pieces of quarter-inch exterior plywood. Just slot the dowels and use glue and screws to hold the plywood paddles in place. Then, for each oar, cut two one-inch pieces of garden hose which can be slipped over the dowel. These pieces, one on each side of an oarlock, serve to keep the oar in place during use.

While the little craft is stable and seaworthy, we would not advise its use on unprotected waters where wind might make it difficult to control. But on calm lakes we've found it easy to row and have had many pleasant hours of fishing. Try it and see. For the cost, you can't go wrong. •



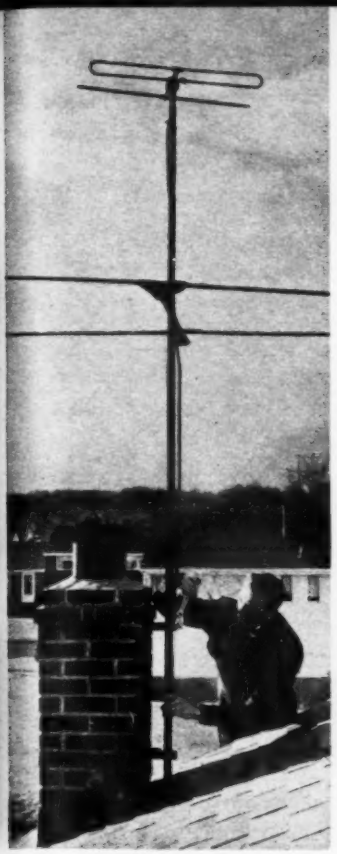


SPRING REPAIRS TO YOUR HOME

Crocuses and homeowners are once again blossoming forth to beautify the premises.

OIL locks and latch fixtures to smooth operation and prevent their rusting.

CHECK ALL JOINTS where wood abuts the stone or brick sections of the house; then, using a calking gun, recalk any fissures that may have developed during the winter.



REINFORCE and if necessary replace the metal straps securing your antenna to roof or chimney.

SCREENS are protected from deterioration with a thin-flowing varnish that does not clog the mesh.

GUTTERS AND DOWNSPOUTS should be cleaned of debris and calked wherever leaks appear. Strainer over downspout keeps out leaves, twigs, etc.

DAMAGED SHINGLES are removed by cutting through the nails with a flathead chisel.

NEW SHINGLE is slid and nailed into place; these shingles are available in one-dozen lots.

FILL IN low spots around foundation so water can't collect and seep into basement.

NOW is a good time to drain your hot-water heater of accumulated rusty water.

RESET SPLASH BLOCK at foot of drainpipe so water will be diverted away from house.

ROOF LEAKING? Take that "stitch in time" by sealing all leaks with roofing compound.

TO REPAIR loose mortar joints, chisel away spalled mortar before repointing.

A COAT OF PAINT on window and door frames will serve to preserve woodwork.

ONE-ROOM CABIN can house guests, a darkroom, workshop, radio shack—you name it.

GUEST CABIN

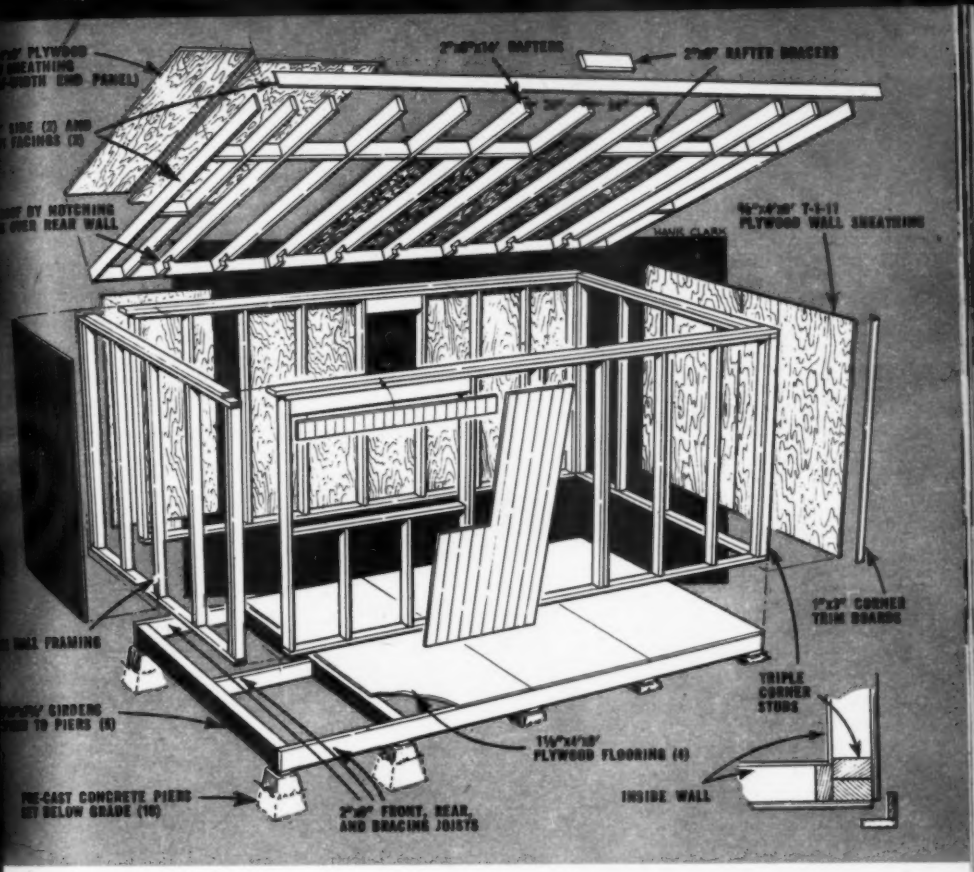
Why not build that "extra room" in the form of a smart little cabin separate from the house?

By Bert Goldrath

THE DESIGN of your home, local building codes and other factors may rule against your adding another room to your house. However, if your lot dimensions are somewhat more than minimal you will be able to solve your space problem by building your "extra room" as a separate cabin apart from the house. An ideal little guest house offering maximum privacy, it can serve alternatively as a den, workshop, radio shack or playhouse for the kids.

Although costs will vary from one locality to another, this particular cabin cost the author only $680, or about $5.00 per square foot including labor and underground electrical wiring. The job was completed in three days with the help of a carpenter.

Keep costs down by selecting a stand-

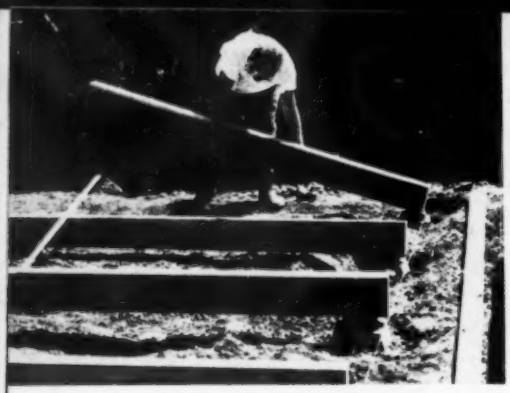


ard, durable building material that can be bought cheaply in quantity. In this case fir plywood was used, not only for exterior and interior walls, but for the roof and floor as well. Note too that the structure—measuring 8x16 feet—is designed to take advantage of standard 4x8-foot plywood panels.

The high cost quoted for a concrete slab foundation dictated the need to build on precast concrete piers. These were set into shallow holes containing four inches of fresh concrete. With the four corner piers squared and leveled, remaining piers were then set in place.

Five 4x8-inch girders were spiked to the piers in parallel rows the width of the building and four feet on center. Then the 2x8-inch blocking was nailed between girder ends on both the 16-foot sides and down the center to provide a grid of four-foot squares over which the

FOUNDATION is of precast concrete piers set in holes containing some fresh concrete.



FOUR-BY-EIGHT girders, in four-foot rows, are spiked to blocks precast in the piers.

FLOOR GRID of 2 x 4's (or 2 x 8's) between girders provides a base for the flooring.

GIRDERS must be carefully leveled. If necessary, shim them with shingle wedges.

FOUR 4x8-foot panels are of 1⅛-inch plywood nailed to grid to complete the floor.

plywood floor is laid. Before nailing down the floor, the understructure was painted with a coat of wood preservative to deter termites and mildew.

Wall framing is conventional with 2x4's placed 24 inches on center instead of the usual 16 inches as in residential construction. Each wall frame may be built as a unit on the deck and then raised into place. Otherwise the corners may be set up first and braced and the walls then framed in place; in this case a 2x4-inch sill is nailed to the floor all around the perimeter. A double top plate of flat 2x4's is required by most local codes. Be sure to use three studs at each corner to give you an inside nailing surface for the wall paneling.

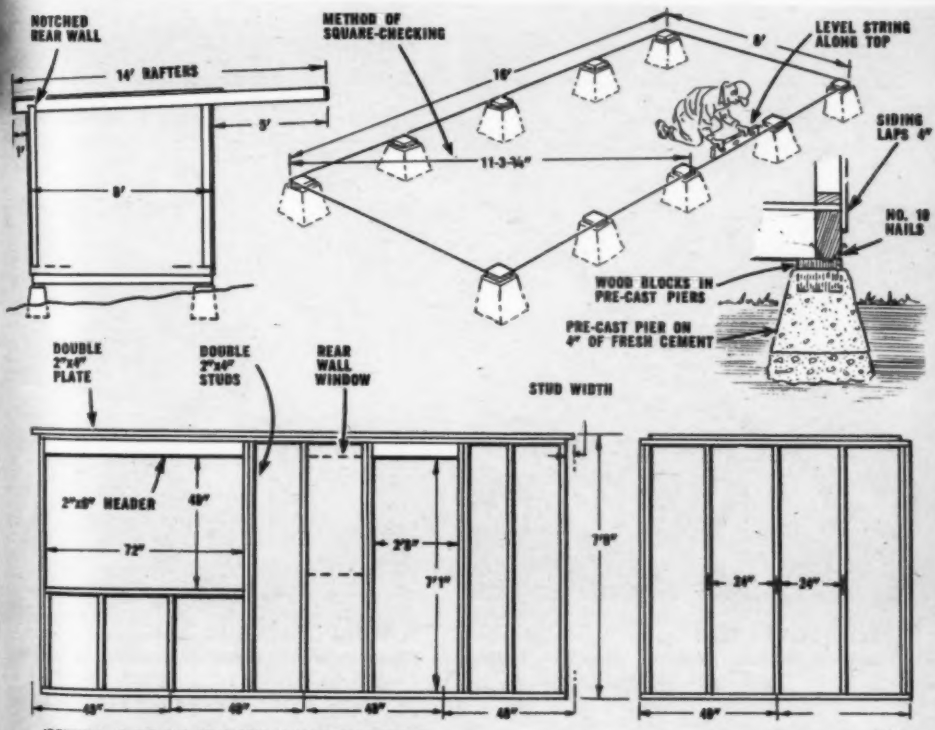
Use two studs at the window and door for the necessary rigidity and structural support. A 2x6-inch header was nailed over the six-foot-wide window to take the weight of the roof off the window frame; and 2x4-inch studs placed beneath the windows help to distribute the load.

Place 2x6-inch rafters two feet on centers across the width of the building. The overhang provided for in this instance is one foot on either end and at the rear, and five feet at the front; the 2x6 rafters are thus 14 feet long. To slope the roof, notch the rafters to a depth of two or three inches where they rest on the top plate along the rear side. To frame for the overhang on the ends, spike 2x6's at right angles to the rafters from inside the [*Continued on page* 136]

Turn page for more pictures.

ERECT triple studs at each corner following the installation of the 2x4-inch sill.

FOUR WALLS go up in a few hours, then are topped with a double plate of 2 x 4's.

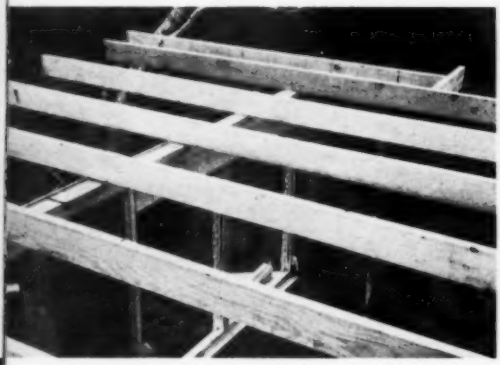


IDENTICAL FRONT AND REAR WALL, EXCEPT FOR WINDOWS

IDENTICAL END WALLS

IT'S PLANNED on a four-foot module, so cabin's plywood panels need no trimming.

PORTABLE electric saw makes quick work of cutting out the two window openings.



TOP VIEW of cabin shows overhang of the 2 x 6-inch rafters on their 24-inch centers.

SHORT 2 x 6's are framed in for the overhang extending over each end of the cabin.

ROOFING PANELS are of ⅝-inch plywood and fit exactly in place over the rafters.

SEALING COMPOUND waterproofs the lap joints between strips of roofing material.

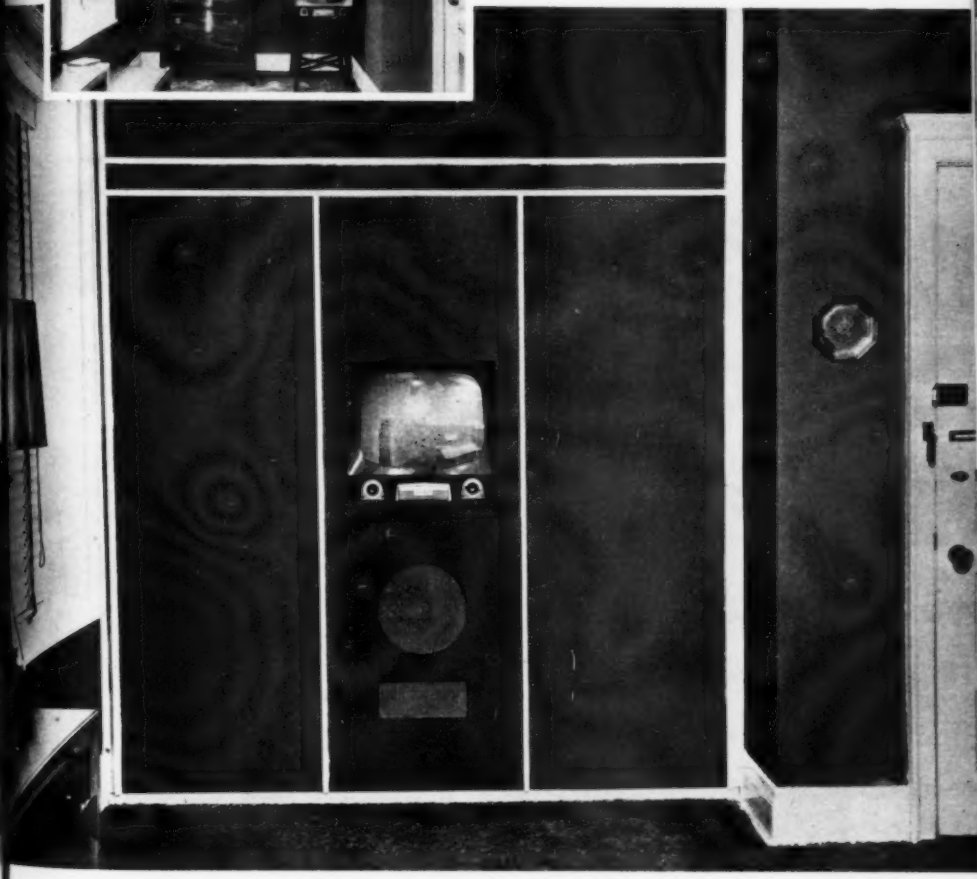
SPRUCE UP YOUR HOME

Space-making CLOSET

Built into a setback, this closet makes use of waste space for storage and creates living space elsewhere.

By E. Charles Duval

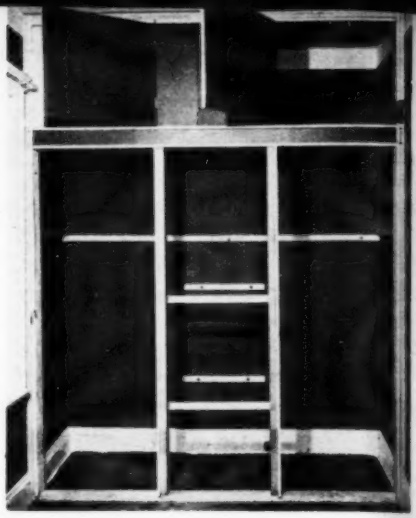
APARTMENT dwellers and people who move into older homes often find that a previous alteration or poor original design has created a space-wasting setback in a room—something



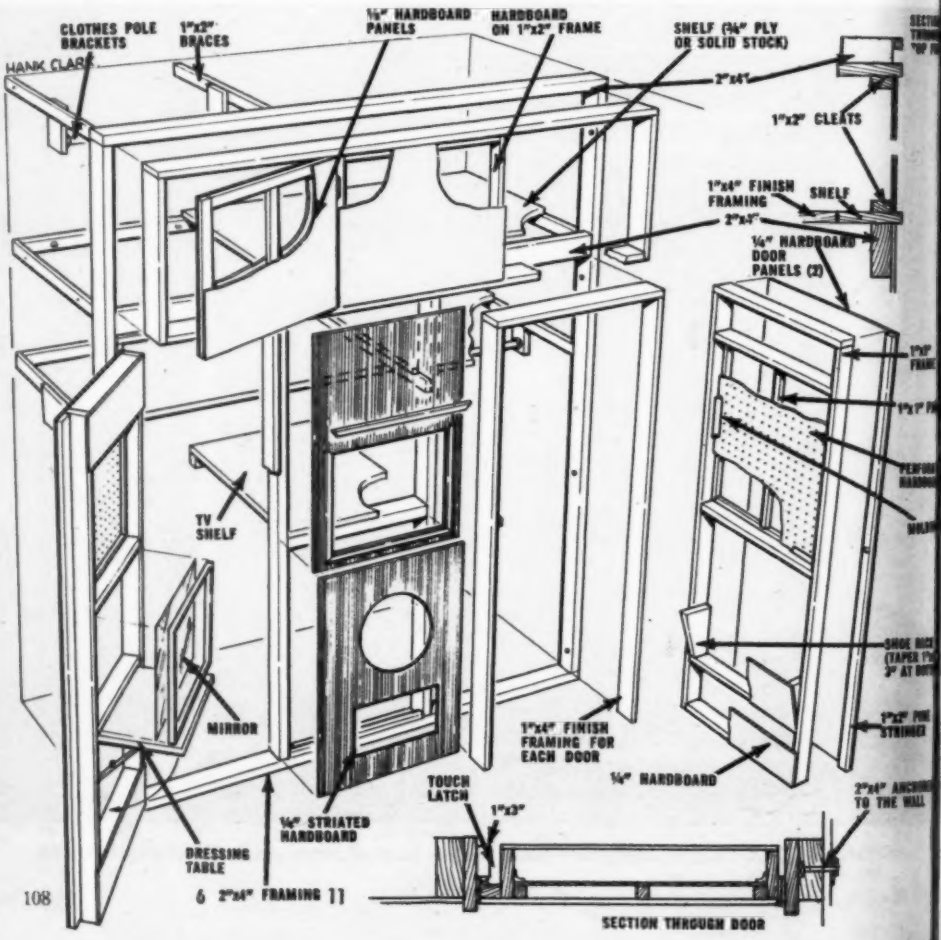
BEFORE AND AFTER views show waste space fully utilized with a closet installation.

that doesn't lend itself to functional arrangement of furniture and generally becomes an unattractive catch-all for odd pieces. Such was the case in the apartment of a young Chicago couple who came up with a space-making solution.

In this apartment, the bedroom was too small to hold a complete set of bedroom furniture, so the chest of drawers had to go into the living room setback. There, it and a television set stuck out like sore thumbs. The solution was to remove an inadequate bedroom closet



CLOSET is framed with 2x4's cut in living room. Note center cleats for TV shelf.

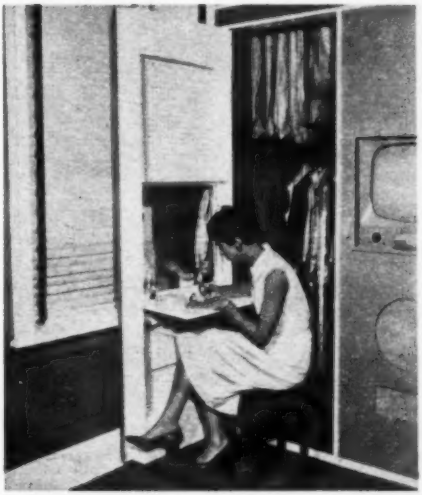


TOP CLOSET DOORS are ⅛-in. tempered hardboard nailed to 1x2-in. pine framing.

and build a floor-to-ceiling closet in the living room setback. Thus the bedroom was enlarged, allowing ample space for a complete bedroom set, and the new closet not only housed the television set but provided more storage space than had been available before.

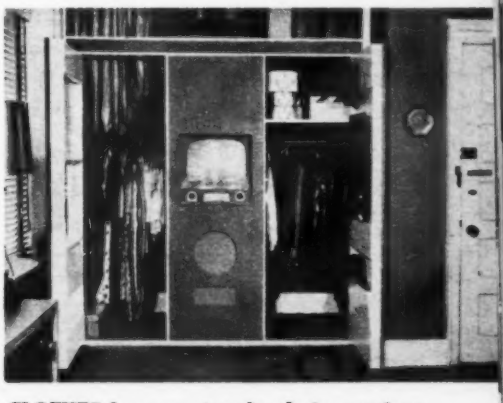
So, if you have a setback that throws a room out of proportion and also wastes space, the drawing and photographs show the simple method by which you can put things right. •

CENTER PANELING is striated hardboard. TV is bordered by ¾-in. screen molding.



DRESSING TABLE on inside of left door is hinged to hang flush when not in use.

BUTT HINGES support upper doors; piano hinges carry heavier load on lower doors.



CLOTHES hang on two levels in spacious closet; those not in season hang on top.

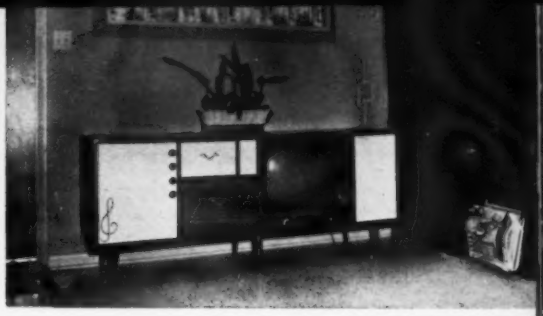
Golden Hammer Award Winners

BENSEN GYROGLIDER, with builder C. A. Green of Mogadore, Ohio, at the controls, is held by a line as it soars aloft in a 20-mph wind; it can also be towed behind a car.

The following craftsmen have been awarded GOLDEN HAMMER TIE BARS for their projects: Charles Russelo, West Middletown, Ohio; Wilko L. Mukku, Lunenburg, Mass.; Thomas J. Knapp, Bloomington, Ind.; W. B. Gouger, Columbia, S. C.; John A. Briscoe, Mineral Wells, W. Va.; Joseph Zon, Jr., Buffalo, N. Y.; Werner F. Gross, Houston, Texas; Howard Ferris, Clear Lake, Iowa; Harold A. Smith, Lansing, Mich.; Arthur J. Kunst, McKeesport, Pa.; Leroy Bellows, [Continued on page 150]

Each craftsman whose project is shown receives a 24-karat gold-plated Hammer and a Workbench Award Certificate. Runners-up will be sent a beautiful gold-plated Golden Hammer Tie Bar or MI's Certificate of Merit. How about sending us a *black-and-white* photo and *full* description of your latest project? Photos of you and your workshop are also eligible. Send all entries, with return postage enclosed, to MECHANIX ILLUSTRATED Golden Hammer Awards, 67 West 44th St., New York 36, N. Y. Entrants are advised that MECHANIX ILLUSTRATED cannot accept responsibility for customs charges, duties, taxes, etc., levied against Golden Hammer and Golden Hammer Tie Bar winners outside the United States.

MIDGET RACER, made from MI plans by Eugene Cicero, Bronx, N. Y., has Fiberglas body and is powered by a 1-hp Briggs & Stratton engine geared down to 12 mph.



TV-RADIO-STEREO UNIT was designed and built by Mr. and Mrs. Robert Wirges, N. Little Rock, Ark., who also planned and finished the modern room housing the set.

ROCK MAPLE cobbler's bench—and the lamp, too—were created by Edward McKenna, Trenton, N. J.

WELSH CABINET of ponderosa pine was built by Paul Hancik, Keyport, N. J., who copied it from pictures.

CABIN CRUISER cost S. L. Howell of Columbia, S. C., about $4,500 to build; his three-year project is 27½ feet long, sleeps four, does 18 knots.

KITCHEN CABINETS of knotty white pine now beautify the kitchen of John Bishop, Lenoir, N. C., who made them.

Paddle Wheel Boat

Here's a boat that's a barrel of fun for the kids and you can build it for less than $35.

By Hal Kelly

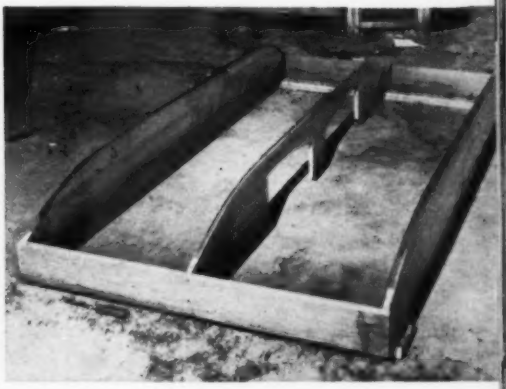
BUILDING this boat will really put you in solid with the small fry—*if* you will give them a chance to play with it when it's finished. And the job takes no more than a weekend for anyone who can cut wood along a line. You don't even need power tools, though they're great for doing a fast job.

When it comes to moving the boat, Junior needs only a few minutes of practice before he's in complete control. A four-year-old can do it and my own six-year-old can make her go faster than an adult can row a boat. There's no front or back—she goes just as well in either direction—and she'll spin around

SIDES and center piece have same curves but are cut separately; it's too awkward to join the three and cut them together.

WHEN CUT, the three are joined temporarily and planed to equal shape; check with square to be sure sides are 90° to edges.

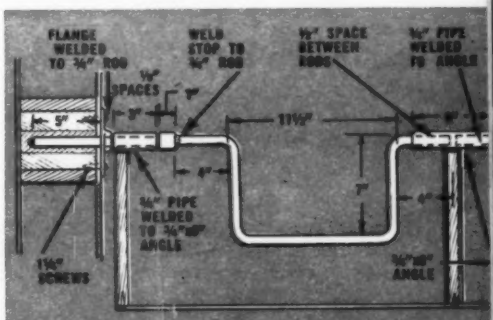
SABER SAW is used for making cutouts in center section; this tool can be used for all the cuts if band saw isn't available.



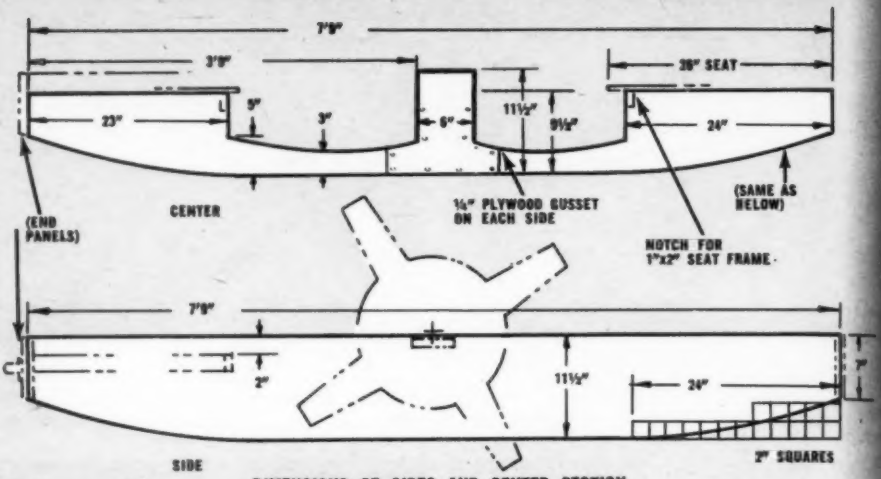
FRAME is assembled with glue and screws; the end pieces are dadoed and rabbeted to take center section and sides respectively.

on a floating leaf if the cranks are turned in opposite directions. It's great fun and a safe boat, too.

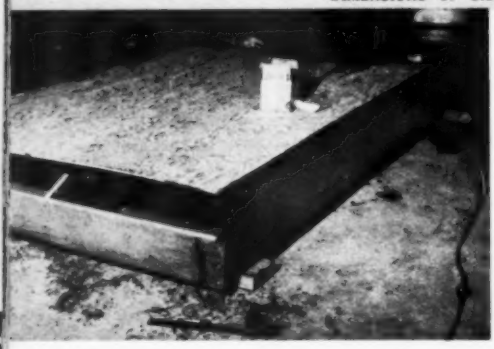
No jig is necessary for construction. The sides and center section are cut to the dimensions shown and, since they have the same bottom curve, are clamped together for planing. They must match exactly on the underside, with the edges square to the sides, so that the bottom will lie flush on all three. When this is done, the end pieces are cut to size and then dadoed at the center and rabbeted at the ends to half their depth. Then the whole frame can be assembled with waterproof glue and 1¼-inch, No. 8 screws. Addition of an exterior plywood bottom completes the hull except for the center gussets, the seat framing and the seats. Before adding the seats, apply one coat of white Firzite and two coats of exterior enamel.



FORM AND INSTALLATION OF CRANK



DIMENSIONS OF SIDES AND CENTER SECTION

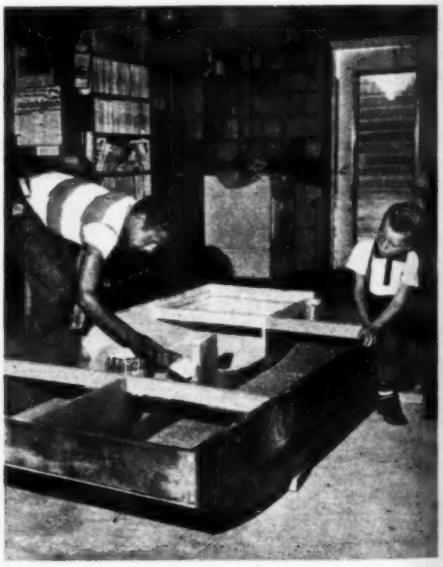


BOTTOM is ¼-in. plywood which is glued and screwed down, starting at the center and working alternately toward each end.

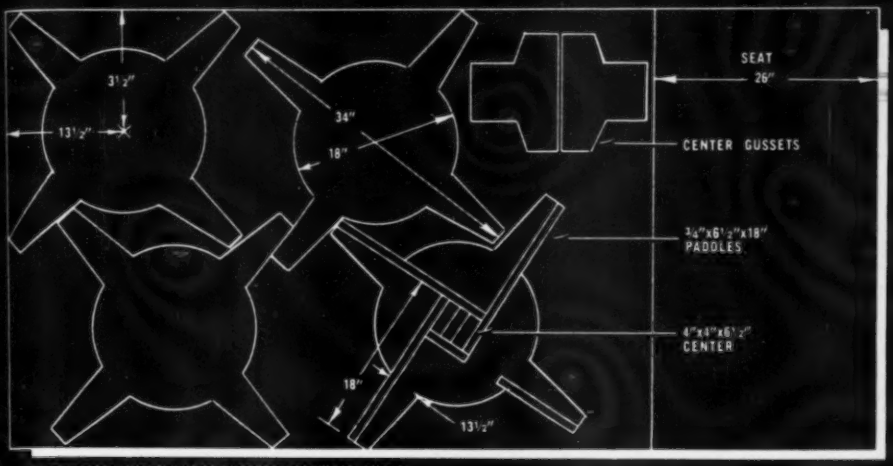
LARGE-SCALE PLANS

are available. Send $2.00 to MI Plans Service, Fawcett Building, Greenwich, Conn. To speed handling, please specify Plan No. B-241, Paddle Wheel Boat.

PADDLE WHEEL sides can be cut with a band saw in one operation if four pieces of ¼-in. exterior plywood are sandwiched.



PAINT JOB is begun before seats are in place. All woodwork gets a coat of white Firzite and two coats of exterior enamel.



The paddles are easily constructed of ¼-inch exterior plywood and solid stock. They're assembled with glue and ¾-inch, No. 16 Anchorfast nails and painted in the same manner as the hull. Ours are bright red to match the seats and contrast nicely with a white hull.

The best approach to building the cranks is to have the local metal shop make them up. They'll have the angle iron and ¾-inch metal rod in stock. When the [*Continued on page* 152]

HOME And SHOP TIPS

TWO STRIPS of tape, parallel to each other, make a guide for painting straight borders. Remove the tape while the paint is still wet.

SCRATCH on the back of a mirror will not be visible from the front if you smooth aluminum foil over the area and secure it with shellac.

Send Freddie Fumbles your idea of a good short-cut, time-saver or safety device in your work, whether it be in the home, shop, office or farm. Each tip accepted will be paid for at the rate of $10. Naturally we cannot acknowledge or return the ones we cannot use. However all will be carefully read and evaluated. (Those which we can use in other departments of MI will be paid for at our regular rates.) Please send in your ideas on a post card only. Address to Freddie Fumbles, *Mechanix Illustrated*, 67 W. 44th St., New York 36, New York.

FREDDIE FUMBLES

WHEN SAWING plywood across the grain, you can prevent splintering by applying a strip of masking tape on the cutting line.

PROP for soldering iron is easily made from a piece of bendable wire.

FILE HANDLE is easily made from a pair of empty spools if a regular handle isn't available; one spool does for small file.

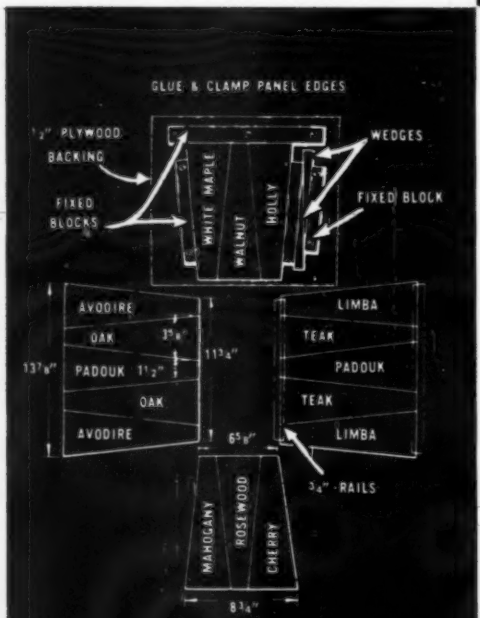
PEG-BOARD dutch door keeps a youngster from falling down stairs and allows child to see through; latch goes on stair side.

RARE WOODS WASTEBASKET

Hardy construction, simple lines, ample dimensions and grainy woods lend to this project a regal elegance.

By Clarence A. Martin

WORLDY WOODS, craftsmanship give this wastebasket the look of fine furniture.

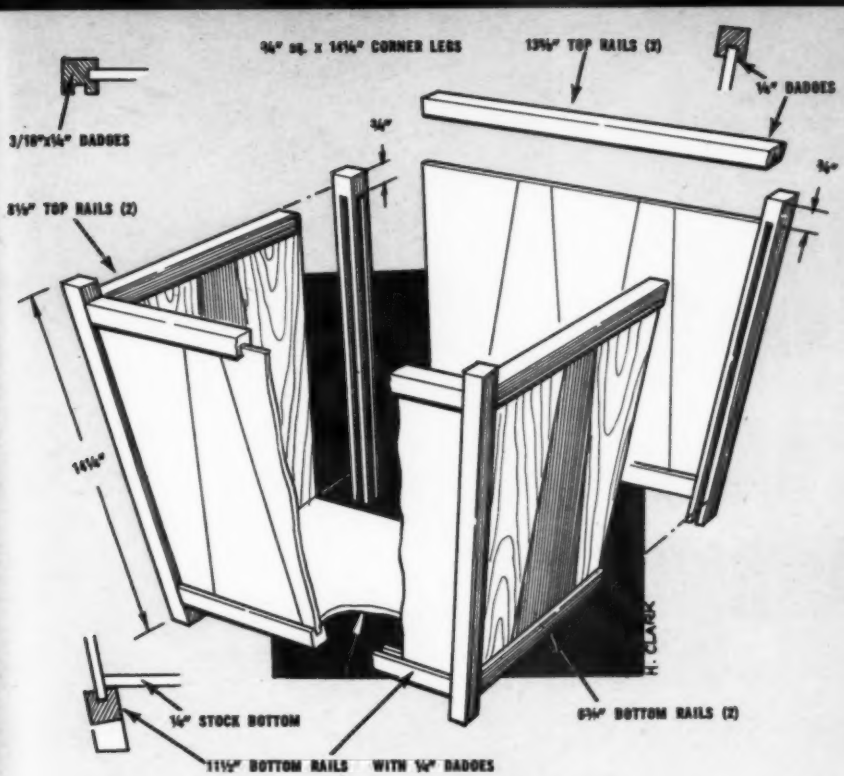


WOODS from such exotic lands as Africa, Brazil, India and Honduras were joined with others from the United States to create this beautiful combination wastebasket and magazine rack. It's made of eleven different woods ranging in color from the ivory white of holly to the dark brown of rosewood.*

Start construction by setting your radial saw arm at 5° and cut the eleven half-inch-thick varieties of wood in the shape of wedges 11 inches long, 3⅝ inches wide at the top, and 1½ inches wide at the bottom. If a circular saw is used, a jig of ¾-inch-taper-per-foot will cut one side, and 1½-inch-taper-per-foot the other.

Now select for the basket—among the extra wedges left over as a result of

*The various woods for this project are available from Albert Constantine & Son, Inc., 2050 Eastchester Rd., New York 61, N. Y. See end of article for list of materials.

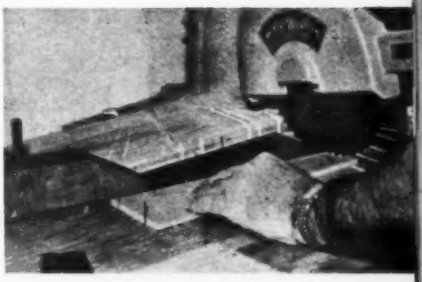


these cuts—those sections that are most attractively grained. For the design pictured above follow the layout at the left; however, other combinations are possible, so arrange them to suit yourself.

A clamping jig is essential for wedging the glued edges of the woods together when forming the sides of the basket. The one used here consisted of a plywood base with quarter-inch pieces of scrap arranged around the work. A sheet of waxed paper along each side of the glued pieces kept the panels from sticking to the jig. White glue was used because it doesn't stain.

With the edges glued and wedged together a second piece of plywood must be placed over the panel and clamped in place to prevent warping. When the glue dries remove the clamps and sand each panel.

During this drying period cut the twelve ¾-inch-square walnut strips that will be used for the four legs and for the top and bottom rails. The legs are 14½ inches long with a quarter- [*Continued on page* 146]



A COUPLE of nails serve as a stop so that wedges are cut to same size. JIG (below) must be used to clamp together the wedges for each panel.

BROAD BACK SAWHORSE

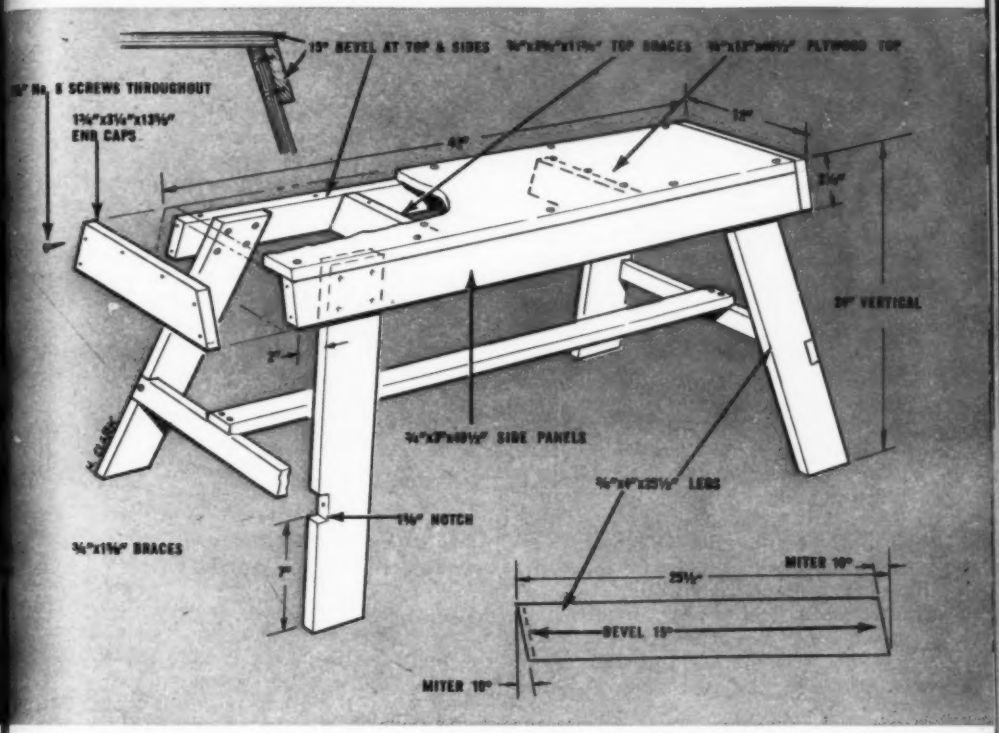
THIS HORSE also serves as a safe and stable platform when extra height is needed for a chore like hanging the drapes.

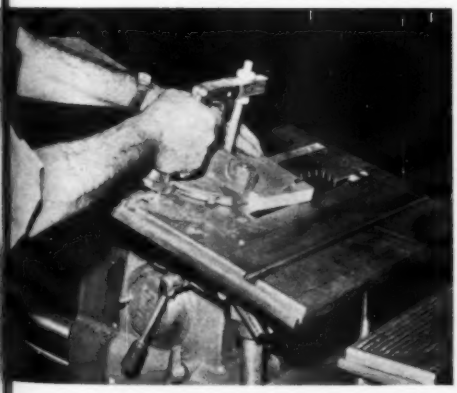
You'll get much more use out of a sawhorse if you build it with an extra-wide plywood top.

IN the conventional sawhorse, a 2x4 serves as a backbone. This is fine when two horses are bridged with lumber to form a large platform or working surface, but two horses and the bridging aren't easy to move around and a single horse has little general use.

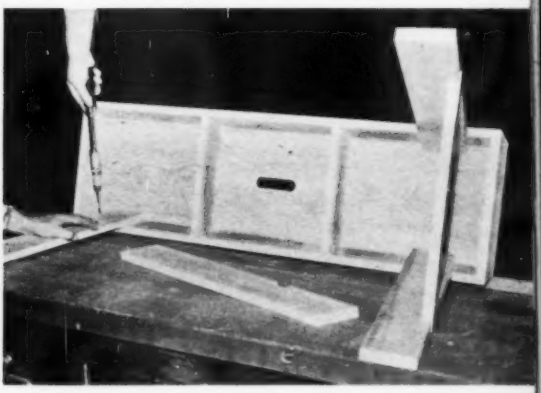
Next time you build a sawhorse, why not use a plywood sheet for the backbone? Then the individual horse has a great many uses. The broad surface makes a good bench for tools and supports sizeable pieces of lumber for sawing. It also doubles as a seat for the man who pauses (briefly, of course) to contemplate his work—and it's a safe, stable platform when there's need to be two feet taller. As is evident, the building doesn't take much more effort than the conventional horse and there's no doubt that the innovation is well worth it.

With the aid of a miter gauge and a tilting saw table or blade, all the cuts are easy to make. Just take care when cutting the notches for the lower braces since two of them must be made with the table or blade tilted 15° to the right and the other two with it tilted 15° to the left. •





ONE CUT creates leg angle and bevel if miter gauge is used on tilted saw table.



GLUE AND SCREWS are used to assemble the horse. Note hand hold in top center.

CAR CARE

YOUR NEW CORVAIR

By Frederick C. Russell
Member, Society of Automotive Engineers

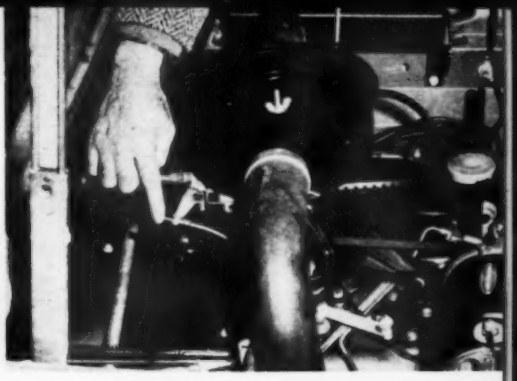
SINCE Chevrolet's Corvair is the only American-made car with the engine in the rear, almost all a new owner needs to know concerns the power plant. Up front there is a fairly standard recirculating ball-type steering gear, an independent front-wheel suspension system with coil springs and spherical joints and a gasoline heater for instant warming in the most frigid weather. True, it's a bit unconventional to find the gas tank under the toeboard and to lift the hood to get to the spare tire, but the real surprises are found in the horizontal-opposed, six-cylinder, air-cooled engine.

This engine has two cast aluminum alloy crankcase halves, steel tubes to house the push rods, two identical Rochester Model H carburetors to feed each of the two intake manifolds and an exhaust system that combines the exhaust pipes, muffler and tail pipe. Very special, too, is the Transaxle which combines the transmission and the axle differential into a single unit.

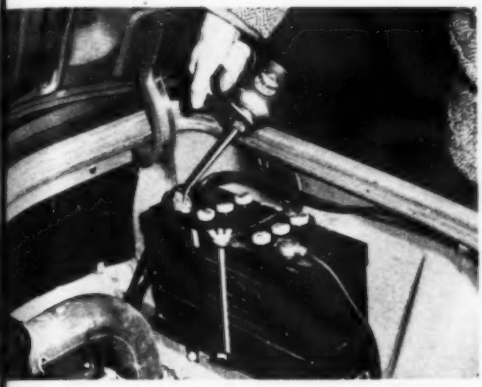
We can see immediately that the placing of the engine calls for a complete revision of several conventional ideas on car care. Take tires, for example: U. S. Rubber Company engineers worked for nearly two years to produce a soft rubber tread with a low cord angle carcass to provide a "big car" feel with greater stability. Goodyear and Firestone also supply the new-type 13-inch tires for the Corvair. But regardless of make, it is absolutely essential that the front tires be held to a pressure of 15 pounds while the rear ones are kept at 26 pounds. This is the pressure reading when the tires are cold. An increase of two pounds per tire is permissible if the car is heavily loaded.

When you rotate tires on your Corvair, don't forget to readjust pressures so that the front ones will not be too hard and the rear ones too soft. If you should let the rear tires run low on pressure, there will be pronounced oversteering. Bear in mind that this doesn't refer to ease of steering, but to a tendency for the rear end to spin out.

IN WINTER, snow may block air intake slots; clean them before starting engine.

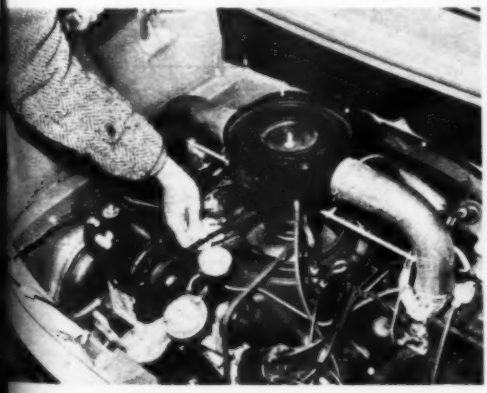


VALVE at blower intake opens fully if thermostat fails, will stall cold engine.



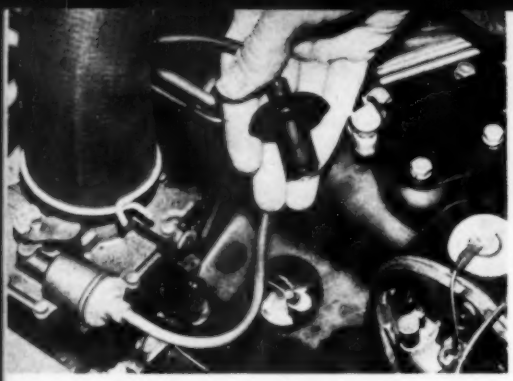
OILING the felt washer at the positive battery terminal will prevent corrosion.

AIR CLEANER element should be removed and cleaned in solvent every 5,000 miles.



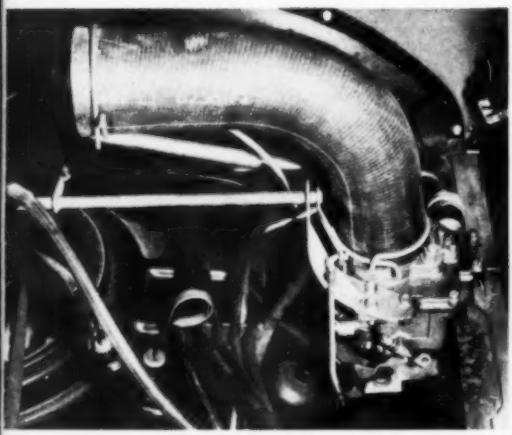
TENSION of 75 lbs. is required on drive belt between blower and the idler pulley.

SPECIAL JACK doesn't go under axle; it is placed under the side edge of the body.



COVERS on spark plugs must be tight; if two are loose, engine cooling is affected.

BLOWER on the air-cooled engine is located directly below air cleaner element.



TWO CARBURETORS feed the intake manifolds; the right-hand one is shown above.

BACK of rear seat folds forward to provide a large flat area for some extra cargo.

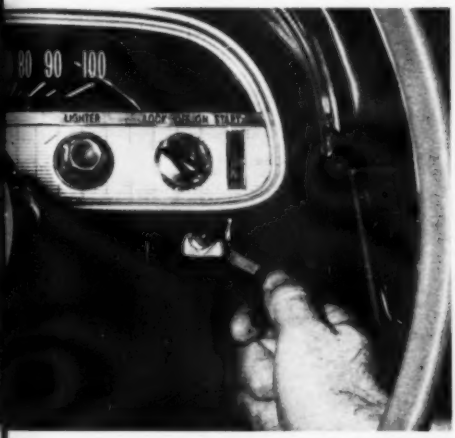
Over-sensitive steering will result from over-pumped tires. Also keep pressure in mind if you switch to the spare.

Corvair's independent rear suspension involves a swing axle. Thus the rear wheels have toe-in. This particular measurement should range from zero to one-quarter inch. Adjusting is done by shimming the front mounts of the transmission so as to move the whole power train toward the front or back.

This matter of the power train is one of the special features of the new car. It consists of the engine with clutch, transmission and axle, the latter three being ahead of the engine. While the rear axle housing and the one for the transmission have separate fillers and drains, lube can flow from one to the other. Thus it is necessary to check the lube level only in the one that is higher. There is, however, no mingling of the lube supplies if the car is equipped with the special Powerglide automatic transaxle.

Just for the record, the transaxle requires 3.1 pints of multi-purpose or universal gear lube. Change the lube after 1,000 miles, check it every 1,000 miles and change it again every 10,000 miles. For the engine, Chevrolet recommends SAE 30 oil if the temperature isn't expected to drop below 32°F, SAE 10 if the minimum is minus 10°F, and

LEVEL FLOOR is a feature since drive shaft doesn't extend from front to rear.



DRIVE SELECTOR is mounted on the dash to the right of the steering wheel shaft.

SAE 5W or SAE 5W-20 multi-viscosity oil below minus 10°F. For maximum engine protection under all driving conditions, Chevrolet recommends oils designated "For service MS" or "For service DG." These will lessen the formation of sludge and varnish. A neat trick to lessen the chance of corrosion on the positive battery terminal is to saturate its felt washer with chassis lube every 1,000 miles.

The Corvair oil filter is a full-flow job, meaning that all the oil from the pump is delivered to it. For this reason it is important to change the filter cartridge after the first 5,000 miles and every 4,000 miles there- [*Continued on page* 148]

SERVICE TIPS

from Detroit

American Motors recommends removal of the front right seat adjuster spring to improve sliding operation on all units built prior to May 10th, 1959; clean and lubricate slides occasionally thereafter.

Chevrolet warns that adhesives used for attaching labels or stickers to windows should not be of the animal or protein glue variety; these may etch and pit the glass. Pressure-sensitive type labels are recommended instead.

When raising a 1960 DeSoto car with a floor jack, the jack must never be used on any part of the car's underside except the front suspension lower control arms or the rear axle housing.

Some '59 Fords develop a brake shoe slapping noise on their left side—the result of "threading" the brake drums during manufacture. Correct this problem by having your mechanic turn the left drums with a light cut to remove the "threading" and by sanding the linings to remove glaze.

Failing to correct a poorly adjusted fan belt will cause excessive wear of water pump and generator bearings, squealing during acceleration and slipping at high speeds, Valiant owners should install belt part No. 2129078, which has improved gripping qualities.

When replacing a torsion bar spring on '57 and '58 Chryslers or Imperials, a rubber seal (part No. 1731266) should be installed on the torsion bar anchor end to prevent accumulation of road salt, dirt and moisture in the torsion bar anchor.

Always maintain a ¼-inch to ¾-inch clearance between the engine fan and radiator core of your new Plymouth.

MONTHLY PHOTO CONTEST

1st Prize ($25) ..... JEWELED WEB

By John Suhay, Pueblo, Colo., with a Linhof Technika 4x5 camera set for f-22 at 1/150th.

$10 Award .....METROPOLITAN OASIS
Desolate figure seated in Central Park is unaware of the camera of Harry Collins, Brooklyn, N. Y., which has sought him out. Picture was taken using a Rollei, Plus-X film and a yellow filter; f-16 at 1/150th.

Please put your name, address and picture-taking data on back of each print. Wrap with cardboard stiffeners and enclose a self-addressed stamped envelope or postage for return of unused photos. Prize-winning pictures are not returned. Judges are MI Editors. Duplicate prizes awarded in case of tie. Address entries to: *Mechanix Illustrated*, Photo Contest, 67 W. 44th St., N.Y.C. 36.

$10 Award .....LITTLE PARTHENON
Verichrome Pan film in a Rollei aimed by Margaret Reilly, Tarrytown, N. Y., recorded these classic columns; f-16 at 1/125th.

$10 Award .....UPS AND DOWNS
Taken by David Strickler, Lebanon, Pa., roll film camera, Super-XX; f-5.6 at 1/250th.

NO-COST EASEL

Make easels of any design or shape from the odds and ends available in every darkroom.

EASEL is positioned in projection area and the bottom taped to the enlarger base.

CUT OUT box lid's center with a razor along scribed outline, then bevel edges.

PASTE white paper to bottom of box, then form guide lines with Scotch tape.

SOONER or later every photographer needs an extra easel or one of unusual size or shape. Here is one that can be made from materials readily available in any darkroom; these include empty film boxes, a ruler, razor blade, some Scotch tape and white paper.

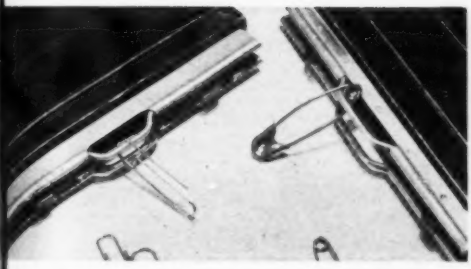
First choose a box of the desired easel size—remembering that its dimensions must be ample enough to allow for a quarter-inch border all around. Outline the desired image size and shape on the lid of the box with a scribe, then cut out the center portion with a razor, beveling the edges slightly to achieve sharper image borders. Next, blacken the edges with India ink.

Paste a piece of white paper on the bottom half of the box and make guide lines along two edges with three or four thicknesses of Scotch tape, trimming off the excess with the razor.

To use the easel, position it in the projection area and tape its bottom half securely to the enlarger base so it won't shift when the paper is inserted. Now, following the guide lines, insert the paper, position the top section, and make your exposure.—*G. L. Guenot*

PHOTO TIPS

TO STEADY CAMERA, attach a light chain to it with a tripod mounting screw, plant one foot on the chain's free end, then pull camera upward until chain is taut.

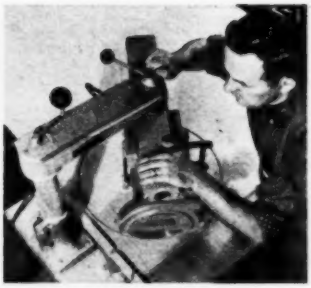


IDENTIFY film holders in the dark by marking them with safety pins and paper clips.

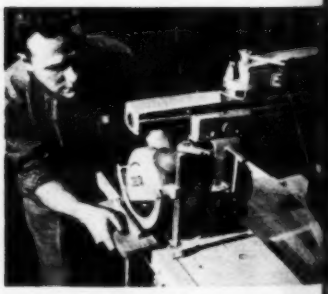
BLINKER switch behind red light makes a darkroom timer; count blinks for exposure.

SCORE tripod legs then paint grooves to speed setting up at much-used heights.

CUTTING MOULDINGS such as this extra large cove moulding is easily done with the regular blade. By simply adding the moulding cutterhead you can cut an endless variety of shapes.

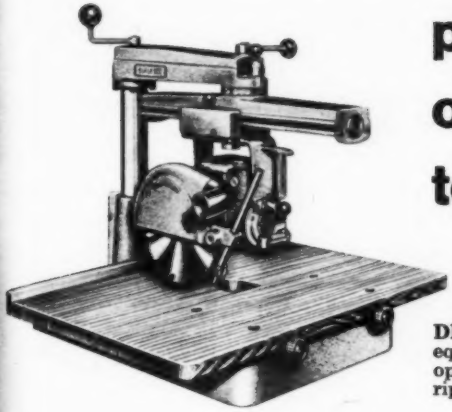


CIRCLE CUTTING is not limited to only one diameter—another advantage of exclusive "Turret Arm" action. You'll really appreciate how easy it is to do this unusual operation with complete accuracy.



SAFE RIPPING of narrow strips is assured because you can lock the fence quickly in the "up front" position. Handy push-grip provides smooth, steady feeding action from start to finish.

"Super 900" Radial Saw



puts more of your skill to work

DELTA "SUPER 900" RADIAL SAW—equipped with powerful motor that develops up to 2 H.P.; cuts 2½" thick stock, rips up to 24" wide.

Here's a workshop workhorse that tackles the toughest jobs you've got—and delivers perfection every time! This rugged Delta Radial gives you precision that is actually built in, yet is easy to use right from the start. You get all the flexibility that Delta "Turret Arm" action provides. Swing, spin or tilt the head—you'll do dozens of operations conveniently, safely because the cutting tool stays over the table throughout a 360° swivel. With this machine you never have to worry about alignment. Thanks to Delta's exclusive, new "Micro-Set" Miter Stops, you can be sure of perfect 90° and 45° cuts for the *life of the machine.*

There are many other unequalled features you'll recognize. And because you know tools, you'll appreciate the industrial quality that Delta's 31 years of experience build into every power tool. So whether you're adding more versatility or starting a one-tool workshop—get the finest! See the Delta "Super 900" Radial Saw and full range of money-saving accessories when you visit your Delta Dealer (he's listed under "TOOLS" in the Yellow Pages) or see it in action at your leading Department, Hardware or Building Supply Store. Don't wait!

OBSERVING THE PLANETS THROUGH COLOR FILTERS

By V. A. Firsoff

THE PLANET MARS as seen through a red filter (left) and with a green filter.

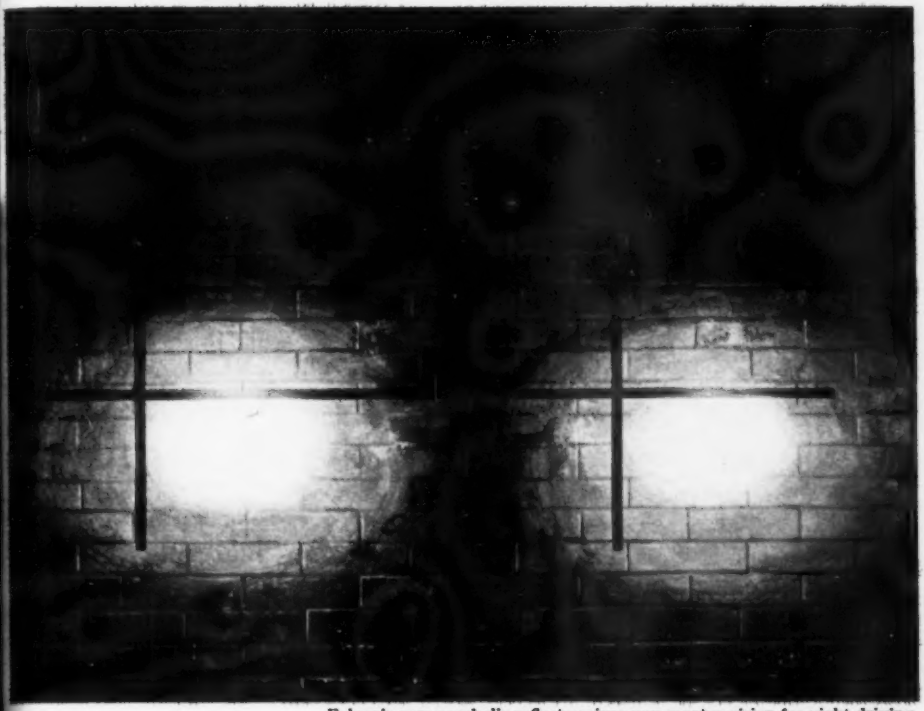
BESIDES spoiling the clarity and steadiness of telescopic vision, the atmosphere tends to kill colors. Look at the gray-blue tints of a distant landscape. How dull and colorless it appears by comparison with the nearby trees and shrubs!

Mars has an atmosphere of its own which, though only about a fifth of ours in thickness, has considerable obscuring powers. Venus and the giant planet Jupiter have denser and more extensive gaseous envelopes and their color degradation becomes superimposed on our own air when we try to examine their surface features.

Not all causes of color distortion are atmospheric. Some of them are in our own eye and brain. For example, if we have a strong source of red light close to a faint one of yellow, the true coloring of the yellow tends to be drowned in the after-image formed in the retina of our eye by the brighter red light. This after-image is in the complementary color—in the present case, blue-green. If the dark areas of Mars appear green to the eye this does not necessarily mean that their true coloring is green, for the after-image of the brighter yellowish and reddish areas of the disk will be green-blue.

It is important, however, to know a planet's true color. If in the above example the Martian "seas" are really green they are more likely to be vegetational areas than if they were merely gray and their greenish hue spurious.

There is where the color filters come in. They can [*Continued on page* 154]



Falcon's new parabolic reflector gives you greater vision for night driving.

Why does the Falcon have single headlamps and dual horns?

Single headlamps cost less to replace. They're *right* for an economy car. But before Ford engineers would OK them for the Falcon, they had to devise a single-light system that would not sacrifice safety.

Result? A new parabolic reflector so efficient Falcon drivers can actually see farther in the face of oncoming traffic than with any dual system.

This same foresighted engineering is found in a single, *adjust-it-yourself* carburetor, bolted-on front fenders that cut repair costs, a gas tank accessible from the trunk, and an aluminized muffler that lasts up to twice as long as ordinary types.

Dual horns cost more! But horns almost never need replacement so there's no long-range economy in skimping on the original installation. And dual horns are better. No single horn gives the quality of sound of two horns. And there's added safety in the warning power of two horns.

That's hidden quality that means *long-range* economy. You'll find it throughout the Falcon. It's there in the sound-conditioned roof, in underbody members that are zinc-coated for protection against rust, in a finish that *never* needs wax, a new battery mount that makes batteries last longer.

Economy where it *pays*... quality where it *counts!* That's the Falcon; the easiest car in the world to own.

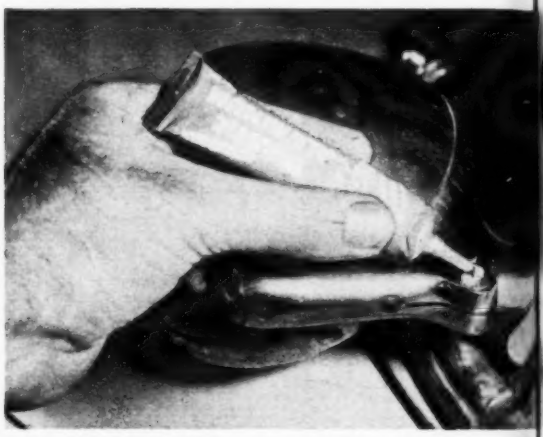
THE 1960 FORD **Falcon**

FORD DIVISION, *Ford Motor Company*

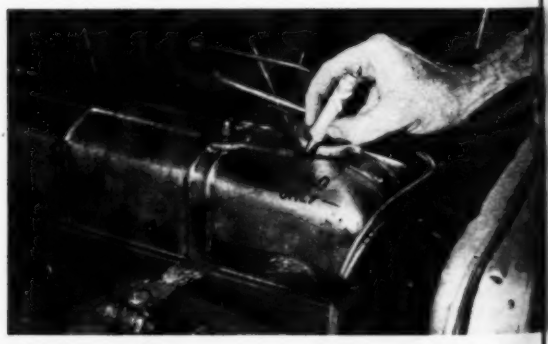
CAR KINKS

MIDWINTER CHECK OF ANTIFREEZE SOLUTION can be made by taking a portion of it from your car's radiator and keeping it overnight in your refrigerator's freezer.

STONES AND PEBBLES that become lodged in the tread of a tire can damage the rubber. An easy way to remove them is to pry them out with your ignition key, as illustrated above.



FRUSTRATE THIEVES by applying plastic aluminum to the screw slots on your car's accessories. Hardened plastic aluminum removes with a soldering iron.



NEW FLUID marking pencils can be used to write down the dates when you last flushed the radiator, changed the oil, etc. A bit of solvent removes ink.

NEW BT3 ENDS TUNE-UP GUESSWORK!

NEW TUNE-UP CONCEPT BALANCES CARBURETION, COMPRESSION AND IGNITION TO RESTORE *NEW CAR POWER!*

Maintain the new car power, performance and economy that was designed into your GM car. Get a BT-3 tune-up . . . the *balanced* tune-up, three ways.

With this new concept, your compression, ignition and carburetion are checked, adjusted and restored to new car condition. Every replacement part is factory approved. For example, all carburetor parts are genuine parts for Rochester-GM Carburetors . . . original equipment on more new cars than any other carburetor. And the whole step-by-step, scientific procedure of BT-3 is factory recommended.

Stop wherever you see the BT-3 sign, and enjoy the new car performance that only a balanced tune-up can give. Or if qualified service is your business, contact your nearby UMS distributor to learn how to give BT-3 to your customers.

[*Continued from page* 104]

walls. Now 2x6 blocking must be carefully cut and nailed between the rafters all around.

The 4x8-foot exterior wall paneling is then applied. Texture One-Eleven fir plywood is vertically scored and displays pleasing shadow effects. No end trimming is necessary since the wall height is exactly 92 inches, the extra four inches extending down below the floor to form a skirt. Two-by-fours all around the bottom of structure give it a finished appearance.

The exterior plywood walls are fastened with six-penny galvanized nails, six inches apart to take full advantage of the ⅝-inch thickness of Texture One-Eleven so that diagonal bracing is unnecessary. This building does not even require felt paper under the siding because the edges of the plywood panels are lapped and make a tight seam. Corner bead of 1x2-inch corner trim is nailed at the corner of each outside wall from top to bottom.

Once the walls are completed it's a simple matter to cut out the window openings. Jalousies were used because they permit about twice as much ventilation as conventional windows and the aluminum frames require no maintenance. Fins on the window frames were nailed directly to the siding, then covered with 1x2-inch trim.

Putting on the roof is simply a matter of nailing down the ⅝-inch plywood panels. By shopping around you should be able to buy these in nine-foot lengths, thus eliminating piecing. Roll roofing with a mineral surface goes down over the roof deck.

Start at the higher side of the roof (in this case, the front) and let the leading edge of the first strip hang down a couple of inches so you can nail a batten over it. Then apply sealing compound to each edge before lapping the next strip. Nail every four inches for a tight seal.

Calk with a cartridge-type gun all around each section of 2x6 blocking and around the windows, especially in the grooves of the plywood. For additional rain protection, install flat or corrugated plastic sheets on the large front overhang.

The building will acquire a smart finished appearance by applying a 1x6-inch fascia all around. This ties together the rafters protruding along the front side of the building. To lend some style to your cabin you may want to taper the overhang —as was done here—from the extreme depth of five feet to two feet at the other end.

The interior is finished off with quarter-inch interior-grade fir plywood on the walls. It nails right into place with a minimum of cutting due to the four-foot module design. Practically no trim is necessary, except around windows, where quarter-round makes a finished edge. The ceiling is half-inch prefinished white insulation board, also in 4x8-foot panels. Redwood battens cover the seams. The floor may be painted or covered with tile or rush squares.

Three electric outlets were installed for wall fixtures and for a small fan-type heater. The current can be switched off and on either from within the cabin or from a switch in the kitchen of your house. A telephone and buzzer system provides communication with the house, and all wires are run through conduit to preserve the natural setting.

The area was landscaped with low-spreading shrubs that conceal the base of the building but do not cut off ventilation. A few fast-growing pines and cypresses, planted six or eight feet apart will provide a fragrant woodsy setting in a relatively short time.

You may call your little auxiliary room a teahouse or a poolside cabana. But even if you don't have a pool and are strictly a coffee drinker you'll get plenty of enjoyment and privacy from this cabin for many years to come. •

FUTURA

Sealed after the famous Lincoln Futura, this model has an electric motor, lights, indicator and plastic canopy. For full-scale plans send 50 cents to MECHANIX ILLUSTRATED, Fawcett Bldg., Greenwich, Conn. Specify Plan M-257, Futura.

Build a Liberty Home *Yourself* WITH NO FINANCING PROBLEMS

SAVE AS MUCH AS $5000

THE AMHERST

IF YOU CAN DRIVE A NAIL, YOU CAN BUILD A Liberty HOME!

Beat high building costs . . . and have an outstanding home, too. The revolutionary, new Liberty Ready-Cut method gives you a beautifully designed home . . . EASY TO ASSEMBLE . . . at unbelievably low cost. Everything is precision cut for exact fit . . . saving days of costly labor. You receive all framing and finish lumber, assembled windows, pre-fit mortised doors, oak flooring, insulation, self-sealing roof shingles, nails, paints, hardware, plus complete building plans and instructions.

THE MANCHESTER

ONLY WITH A Liberty Ready-Cut Home CAN YOU GET ALL THESE EXCLUSIVE BUILDING SERVICES

UNCONDITIONAL GUARANTEE—Your Liberty Home is covered by an unconditional guarantee for quality, quantity and soundness of construction.

FINANCING NO PROBLEM—Liberty Homes are approved by Banks and Savings and Loan Associations everywhere. Acceptable for FHA and VA financing.

SOLD DIRECT TO YOU—Liberty has no salesmen. You buy direct and save sales commissions. You make your own decision without high pressure tactics of any kind.

SAVE $5000—You save on material cost, labor cost, contracting fees. You eliminate all middleman's profits, architect's fees and costly material waste.

100% QUALITY—Only materials of unquestioned quality are used. All lumber is kiln-dried. Your home will last a lifetime.

FREE CONSULTATION—The Liberty way is the foolproof way. However, if a problem of any kind arises during construction, Liberty's building consultants are ready to help you day or night without obligation.

78 DESIGNS—For 1960 Liberty offers the most beautifully designed homes in America today with unlimited floor plan variations to fit your specific needs.

Priced from $3700 . . . Freight Prepaid

LIKE TO VISIT A LIBERTY HOME?

Over 25,000 Liberty owners are thrilled with their homes—and there is one near you . . . just ask us for the address.

Our fights have turned to kisses!

IT'S hard to believe that my wife and I used to fight. She would start nagging at me the minute I got home from work and I would snap right back at her! We argued and bickered so often that we suddenly realized our marriage was breaking up! There wasn't any real reason for it except that both of us always felt so tired that we got on each other's nerves!

Our family doctor gave us some advice that probably saved our marriage. Otherwise normally healthy people, he told us, may become run-down and over-tired because of a vitamin-mineral deficiency. This could easily cause us to feel worn-out, tense and short tempered.

To correct this condition, each of us started taking Vitasafe High-Potency Capsules. Before long we had more pep, more energy — and our dispositions improved. Instead of fighting, we were back in each other's arms.

If you or your wife have lost the pep and energy you used to have...if over-tiredness makes you nervous and bad-tempered with the ones you love, you owe it to yourself to try proven Vitasafe High-Potency Capsules.

A dramatization posed by professional models.

FREE 30 day supply of HIGH P

LIPOTROPIC FACTORS, VITAMINS and MINERALS

Safe, Nutritional Formula Containing 27 Proven Ingredients: Glutamic Acid, Choline, Inositol, Methionine, Citrus Bioflavonoid, 11 Vitamins (Including Blood-Building B_{12} and Folic Acid) Plus 11 Minerals

To prove to you the remarkable advantages of the Vitasafe Plan . . . we will send you a free 30-day supply of high-potency VITASAFE C.F. CAPSULES so you can discover for yourself how much stronger, happier and peppier you may feel after a few days' trial! Just one VITASAFE CAPSULE daily supplies your body with adequate amounts of *each and every vitamin* believed essential to human nutrition. Also included in this exclusive formula are Glutamic Acid — an important protein constituent derived from natural wheat gluten—and Citrus Bioflavonoid. This formula is so complete it is available nowhere else at this price!

HOW AMAZING PLAN SLASHES VITAMIN PRICES

With your free 30-day supply of Vitasafe High-Potency Capsules you will also receive complete details regarding the benefits of an amazing new Plan that provides you regularly with all the factory-fresh vitamins and minerals you will need. By participating in the Vitasafe Plan now you are never under any obligation! When you have received your first 30-day trial supply, simply take one VITASAFE Capsule every day to prove that this formula can help you as it is helping so many others. But you remain the sole judge. If you are not completely satisfied, and do not wish to receive

Why Does Daddy Sleep So Much?

SOMETIMES I couldn't blame my little boy for wondering. It seemed as though the only thing my husband enjoyed was SLEEP! He would come home from work completely worn-out, often he skipped supper and fell right into bed. What kind of companionship was this for his children, his friends, his wife?

My husband was such an energetic man. But for some reason he now seemed too tired to do anything. I wondered what I could do to help him.

Then one day I saw a Vitasafe ad in a magazine. It told how many otherwise normally healthy men and women could easily lose their pep and energy because of a prolonged deficiency of essential vitamins and minerals in their diets. The ad revealed that thousands of men and women had increased their pep and vitality through the famous Vitasafe Plan. Maybe this Plan could help my husband too.

I sent for the 30-day trial supply that was offered, and when they arrived, my husband started taking one a day. Before long my husband was like his old self again — peppy, energetic and wide awake!

If you want to help your husband as I did mine, mail the postcard for your 30-day trial supply without risking a penny.

A dramatization posed by professional models.

H POTENCY CAPSULES

any additional vitamins, simply let us know by writing us before the next monthly shipment — or you can use the handy instruction card we will provide — and no future shipments will be sent. Yes, you are under no purchase obligation ever; you may cancel future shipments at any time!

But if you are delighted — as so many people already are — you don't do a thing and you will continue to receive fresh, additional shipments regularly every month — for just as long as you wish, automatically and on time — at the low Plan rate of only $2.78 plus a few cents shipping for each month supply. You take no risk whatsoever—you may drop out of this Plan any time you wish without spending an extra penny, by simply notifying us of your decision a few days before your next monthly shipment. Take advantage of our generous offer! Mail postcard NOW.

MEN RECEIVE IN EACH DAILY VITASAFE CAPSULE:

Choline Bitartrate	31.4 mg.	Niacin Amide	40 mg.
Inositol	15 mg.	Calcium Pantothenate	4 mg.
dl-Methionine	10 mg.	Vitamin E	2 I.U.
Glutamic Acid	50 mg.	Folic Acid	0.5 mg.
Lemon Bioflavonoid Complex	5 mg.	Calcium	75 mg.
Vitamin A	12,500 USP Units	Phosphorus	58 mg.
Vitamin D	1,000 USP Units	Iron	30 mg.
Vitamin C	75 mg.	Cobalt	0.04 mg.
Vitamin B_1	5 mg.	Copper	0.45 mg.
Vitamin B_2	3.5 mg.	Manganese	0.5 mg.
Vitamin B_6	0.5 mg.	Molybdenum	0.1 mg.
Vitamin B_{12}	2 mcg.	Iodine	0.075 mg.
		Potassium	2 mg.
		Zinc	0.5 mg.
		Magnesium	3 mg.

We invite you to compare the richness of this formula with any other vitamin and mineral preparation.

ALSO AVAILABLE, A VITASAFE PLAN WITH A SLIGHTLY DIFFERENT FORMULA FOR WOMEN. CHECK POSTCARD IF DESIRED.

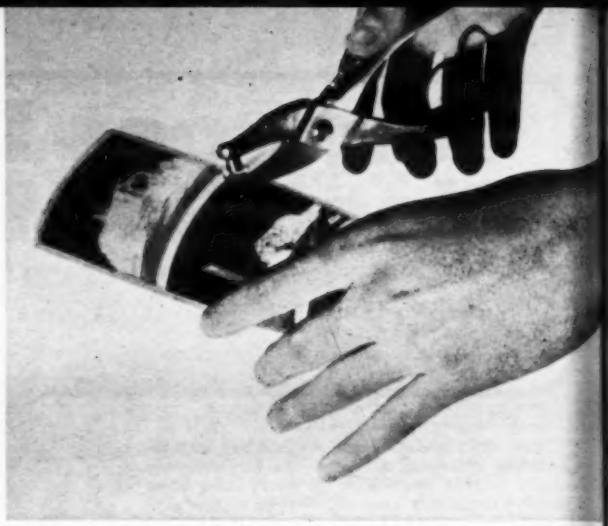
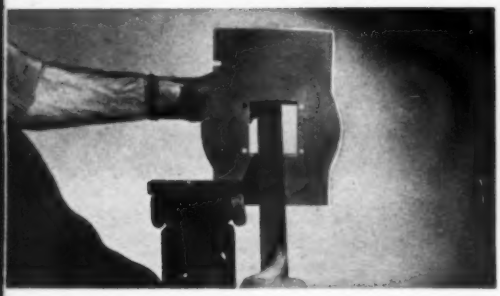
PHOTO SHORTS



USE PAPER PUNCH to knick edges of negatives chosen for enlarging: then select them by feel in the darkroom.



BEVEL the squared sides of the opening in a negative carrier and it's easy to . . .

. . . **BRUSH AWAY** the dust from any negative placed in the carrier for enlarging.

ATTACH tape to tripod to measure lens-to-subject distance for close-up photos.

HEAT from 100-watt bulb quickly seals a transparency in a thermal-seal mount.

Only the best wood rules merit this seal

If a carpenter catches you measuring something, he'll think you're a fellow professional (if you're using a Lufkin RED END rule).

This Lufkin X46, for example. It *looks* quality, with its natural finish and crisp, black graduations; or the 6″ brass extension that makes inside measuring so simple. It even *speaks* with authority . . . a decisive "snap" from gleaming joints and strike plates.

The X46 is only one of *four* Red Ends you'll find on the Lufkin Turnover Target—where you can select the exact rule that suits your needs. Reach for one at *your* hardware store.

HOW TO RUIN YOUR *Outboard Motor*

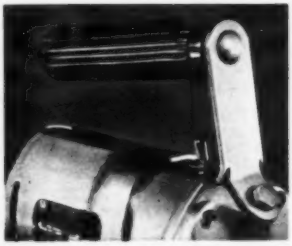
USE pliers instead of the proper wrench and you'll excell at rounding off a nut.

BALANCE a motor this way and then step into the car. Need we tell what happens?

SAND makes a good abrasive, also clogs parts—and to bend the shroud, sit on it.

TO DESTROY finish—and the magneto—a hard ride in a pickup is just the thing.

AVOID lubrication. Then force a frozen control instead of using penetrating oil.



B&D'S NEW JIG SAW HANDLE is in a class by itself! Designed to "feel good," perfectly balanced for sure control, fast work. *Plus* three-wire cable. Two *extra* blades *free*.

HEAVY-DUTY SAWS. Famous B&D-built motors. Saws from $49.95. Saw Attachment for Drill, $14.95.

Improved B&D Jig Saw

25% faster cutting, better control

...greater value. Only $29.95.

Just out—and rarin' to go through practically any material with the greatest of ease: that's Black & Decker's improved Jig Saw! Does the work of a jig saw, sabre saw, keyhole saw and most band saw operations. Cuts straight, curved and intricate designs. Handles like a dream. Feels like a feather. Packs power to spare . . . up to 25% faster sawing. Maneuvers like a sports car.

What more do you want? A new low price? You've got that, too! This Black & Decker-engineered Jig Saw costs *only $29.95*. Jig Saw Attachment for B&D Drill, $14.95.

Rare Wood Wastebasket

[*Continued from page* 119]

BECAUSE of its beauty and dimensions, the wastebasket also makes fine magazine rack.

inch-deep plough cut in two adjacent sides along all but ¾ inches of their length. The bottoms of the feet are mitered 5°. Plough the bottom rails in the same manner as the legs, but along their *entire* length; the top rails are ploughed along their *bottom* sides only. Another jig utilizing wedges will be needed to glue the top and bottom rails to the panels.

In the final assembly the quarter-inch walnut bottom is fitted in place and the four legs glued to the panels. Hold the assembly together with large rubber bands until the glue sets.

Finish the basket with three coats of lacquer, rubbed down between coats, and followed by a buffing with paste wax.

With this step the project is complete and ready to reflect your craftsmanship in any office, den, or wherever you choose. *

LIST OF MATERIALS

One piece of ¼"x7½"x12" of each of the following woods:
Cherry, Honduras mahogany, white maple, white oak, avodire, holly, limba, padouk, Brazilian rosewood, and teak.
One piece of ¾"x7½"x24" walnut
One piece of ¼"x7½"x24" walnut
Two running yards of ¾"x¾" walnut

[*Continued from page* 125]

after. Be sure to clean out the shell before installing a new cartridge and remove the old seal from the filter, otherwise the new seal may block the filter's oil passage. It is also important to wipe off any spilled oil which might get on the engine's blower belt and cause slippage. *This blower is the heart of the Corvair air cooling system.*

Engine temperature is controlled by a hinged ring-type air valve at the blower intake. The valve can be adjusted by means of a swivel located on the thermostat valve. Should the thermostat fail, it will always open the valve fully so the engine will not overheat, but the engine will stall a lot if the valve is fully open and the temperature is low. The Corvair engine is enclosed by sheet metal shrouding which directs air over fins on the cylinder castings. Good news is the fact that the blower has a sealed and permanently lubricated ball bearing. But belt checking is part of the Saturday afternoon look-see.

In removing spark plugs, difficulty will be encountered with the center ones. There, it is necessary to disconnect or remove the throttle rods and use a universal drive on the spark plug socket. A $\frac{13}{16}$-inch spark plug socket is used for removal. Chevrolet says not to use any pipe compound on the threads when replacing the plugs since this will act as an insulator and change the plugs' heat characteristics. Set the gap at .035 inch, bending the outside electrode only. Torque to 20-25 foot pounds. Original equipment plugs are AC-44FF, 14 mm.

It's important to make sure the plug covers are tightly in place. If two are loose, all air pressure in the cooling system will be lost and the engine will run too hot. There may even be a mysterious whistling noise. And speaking of noises, keep in mind that the hydraulic valve lifters on the Corvair are designed to drain down after the engine stands idle. Don't be alarmed by the clatter on restarting; it's normal and won't last over 30 seconds.

An interesting feature of the automatic transmission is that it will automatically shift to D at 45 mph if the driver is accelerating that fast in L. Don't tow the car to start its engine. Push it. Start off in N with the ignition switched on and shift to L when the car reaches a speed of 25 mph. Contrary to the advice given by some of the other companies, Chevrolet doesn't recommend any periodic draining and refilling of the transmission oil, but they do stress the importance of not overfilling. The dry capacity of Powerglide, including the converter, is 12 pints. There's a difference of only one pint between Full and Add and there's a need for frequent checking, but don't add oil unless the level is near the Add mark on the dip stick when the engine is at normal operating temperature. You'll find the dip stick in the right front of the engine compartment. Check while the engine is being idled with the control lever in N.

An odd thing in the fuel system of the Corvair is the fact that the choke is located in the air horn assembly on top of the engine rather than at the carburetors which are separated from the engine manifold by an insulated block. A cross shaft, operated by the accelerator linkage, connects the throttle shaft levers of the two carburetors. Thus some of the adjustments that would normally be made at the carburetors are made at the air horn assembly which includes the automatic choke, choke modifier and the fast idle linkage.

The air intake is through slots which are a feature of the car's rear deck. They must be kept open. That means cleaning snow away in winter before starting the engine. In the air cleaner, there is a special rubber-like element which should be removed and dunked in solvent every 5,000 miles. Squeeze out the solvent thoroughly and then dip the element in oil again, squeezing out the excess.

The oil cooler should be cleaned every 5,000 miles. After removal, the cooler is turned upside down to allow oil to drain out. The radiator fins should be cleaned with an air hose before as well as after cleaning them with solvent. New seals should be used on the oil cooler adapter. Always look carefully for oil leaks around the cooler after the cleaning job.

Corvair's gasoline heater includes a heat exchanger and burner assembly located on

Your New Corvair

[*Continued from page* 148]

the right side of the dash panel in the luggage compartment. An overheat switch automatically shuts off fuel if the temperature rises too high, but resets itself when things cool off. For better rear-seat heating, operate the blower at high speed with the lever marked "fan" while regulating the degree of heat with the lever marked "heat." There's a third control for defrosting.

In an effort to provide highly efficient cooling it is perhaps natural that Corvair designers should invite carburetor icing by not allowing the mixture sufficient preheating. Carburetors are outside the blower system and do not have the advantages of a "stove" or "hot spot." In the temperature range of 30° to 45°F, and where there is considerable dampness, early production engines were inclined to stall because of ice forming across each carburetor's throat.

Chevrolet has corrected the problem with Corvair by the use of baffles to direct more warm air to the carburetors and changes in the acceleration pump.

If you follow the rules, keeping your new Corvair in top form ought to be as much fun as driving it. •

More aircraft use Champions than any other spark plug . . .

Over twice as many car makers specify Champion spark plugs.

Q. Why do the experts in field after field where power is vital choose Champion spark plugs?

A. Because they know they can depend on Champions to deliver every bit of performance from every drop of gas. Your car will perform better, too (and save money on gasoline) with new Champions. Put in a set every 10,000 miles!

Worn spark plugs waste lots of gas—so check your plugs every 5,000 miles!

Paddle Wheel Boat

[*Continued from page* 115]

OIL HOLE is drilled in the center of each crank bearing. Note stop welded to the shaft.

flanges and the stops are welded to the rods, be sure that a ⅛-inch space is allowed between them and the pipe bearings. My total cost for the crank material and labor was under eight dollars.

Study the drawings and photographs and get to work. You'll look far and wide before you find another project which provides so much fun for kids at so little labor and cost. •

CRANKS are installed. Each is slipped into center bearing, then fastened to side plank.

New HARLEY-DAVIDSON DUO-GLIDE

We've put this "show" on the road—the world's finest motorcycle made better than ever by the world's finest craftsmen.

Spectacular styling with gleaming new headlight nacelle of aluminum alloy. Flowing back from the nacelle, new twin-flare tank paneling adds dash to the famous Duo-Glide look. Spectacular new performance is the result of a host of new mechanical improvements . . . quieter engine, longer bearing life and faster starts.

Observing The Planets

[*Continued from page* 132]

be used either photographically or visually and the range can be extended beyond the colors visible to the eye, into the infrared and ultra-violet.

The photographic possibilities of color filters have been well known for some time. However, their systematic use in visual observation is comparatively recent. It is also within easy reach of the amateur astronomer. These filters need not be mounted in optical glass. A plain gelatine filter can be cut and inserted in the eyepiece or inside the tube (always out of focus).

Ordinary filters used in photography are not suitable for visual observation. There are two kinds of filters that can be used to advantage in visual work: the so-called tri-color sets, containing a red, a green and a blue filter, and the narrow-band monochromatic filters.

The object of the tri-color sets is to separate as nearly as possible the three fundamental color reactions of the human eye. The eye contains color-sensitive elements, called cones, of three kinds. One set has a maximum response to red, the other to green and the third to blue. The ranges of the three kinds of cone overlap. Thus, the red cones react to green and even blue light as well, though less strongly than to red, and it is the interaction of the responses of the red, green and blue cones that produces our different color sensations. For instance, the sensation of yellow is due to the combined action of the green and red cones, while a red response enters into the making of violet color.

Seen through a set of color filters, a color manifests itself as much by its presence as by its absence. Let us take, for instance, a visually gray object which yet has a little red in its make-up. When viewed through a red filter, it will appear relatively brighter than when a green filter is used. Snow has a green cast and so the polar caps of Mars and of Venus (the existence of the latter is not universally admitted but this writer has seen them so often and clearly that he has little doubt of their existence) stand out in sharp relief through a green filter.

Tom Tests The Valiant

[*Continued from page* 90]

and it shows what balance can do. I wasn't in on the design planning of this cookie but I suppose the engine was tilted to the right to compensate for the driver's weight on the left side of the car. Therefore, perhaps even before you read this, a heavier shock or maybe even a heavier torsion bar will be used on one side to even out this rather odd phenomenon.

One day at the Daytona Beach International Speedway, when the boys were waiting around to test some monster from Detroit in an endurance run, a handful of Falcons and Corvairs and one lone Valiant (my test car) were taken out on the sports car track and given a squeeze-out. Needless to say, there was very little contest. The Valiant whipped by its lower-caloried competitors like Halley's Comet might trickle by Piccard's balloon. This is a superior-performing automobile. Size-wise, when you're behind the wheel you feel as though you're tooling a 1950-53 car. This is a happy size to drive on the road and I wouldn't feel in the least abused if I had to drive a Valiant coast-to-coast and back.

This job will cruise across the prairies without any trouble at 80 mph-plus. The ride, though not sensational, is not tiring. Usually, when I start any new car test, after a few miles of driving I ask myself, "If I was a truss peddler and had to make runs from New York to Los Angeles by various routes, would I like to do it in this rig?"

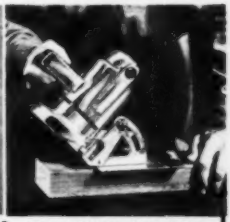
In the old days, when these tests were young, I made as many as four to six coast-to-coast runs every year, under all conditions from sandstorms that lowered my compression as much as 30 to 40 pounds in all cylinders, to going across the Rockies in the teeth of a howling blizzard. I've crossed Nevada in temperatures of better than 120 degrees and I've seen it 40 below in Montana. When I visualize a car for this sort of work (and that's the only car I'd own—one that could go anywhere at anytime, providing there is road and some traction), the first requirement is always good suspension and handling. In this respect, the Valiant reminded me of a number of cars I've owned and driven through tough spots

[*Continued on next page*]

What the POWERFUL Porter-Cable MODEL 66 SAW can do...

This portable power saw is the workhorse in any shop... built with professional features for top performance; converts to stationary saw with accessory saw table. Do a multitude of cutting tasks with wide variety of available blades.

POCKET CUTS—Cuts openings quickly and easily in existing walls for windows, medicine cabinets, heat ducts, etc.



BEVEL CUTS — Model 66 bevel cuts any angle from 0° to 45° — in 2" dressed lumber. Calibrated quadrant for accurate angles.

KICKPROOF CLUTCH—Automatically puts saw into "neutral" if it jams or pinches in the cut. Prevents kickback for all around safety.

TELESCOPING GUARD—New design of telescoping guard eliminates jamming and "drag" at the start and during any type cut.

and situations. This small (by today's standards) car will go a lot of places that the big balloons couldn't even attempt.

Since I've had the Valiant on test, there's been a scramble to see who gets it. Jim McMichael wants it for various trips he has to make. As this is being written, there's more than $30,000 worth of 1960 king-sized cars parked outside my house. Only one car is missing—the Valiant. My wife took it marketing because she thinks it's so much more fun to shift gears. (Our test car is a stick job, but automatic transmissions are available.) This test car is the Valiant 200—as stark as a fan dancer with one molted plume. It has few extras, not even a heater.

The gear lever of the stick shift is bent in an odd S to keep it out of the way of a third passenger in the front seat. For big guys like myself, I'd bend it a little more to the right in the interest of driver comfort. The box is crisp and as easy to run through as turning on a water faucet. The one thing that impressed me above all else about the Valiant (and this same feature impressed everyone else who drove it) was its extreme quietness. This little bucket has been beaten around for better than 1,000 miles, with less consideration shown to it than Uncle Sam gives a tardy taxpayer, and at this moment I can say with all sincerity that I've never driven in a Rolls-Royce that was any more silent. Engine noise is undetectable. Much of the quietness is undoubtedly due to Chrysler's new "Unibody" construction.

The legroom is far more than will be found in many larger cars; in fact, unless you're over six feet six you shouldn't find any problems in this department. The seat height allows enough headroom for a six-foot-sixer to wear a hat.

In summing up, this is the last of the Big Three compact cars to be tested on these pages. The Corvair, due to its many engineering firsts (for an American manufacturer) is more intriguing, in some ways, with its six-cylinder aluminum, air-cooled pancake rear engine. There are plenty of good things to say about Ford's Falcon. However, throwing all the good and bad points in a ballot box, including price tags, the Valiant gets my vote as the best buy of the three new compact cars and the one I'd most like to own. •

Cleaning & Cooking Fish

[*Continued from page* 72]

connoisseur.

To clean any fish (except catfish and eels) take a sharp knife and slit along the belly from the vent to the throat. Then scrape out the entrails and the gills. *Be sure to get out all the kidneys.* These are a dark strip clinging to the backbone like congealed blood. Soilage starts in the kidneys.

As soon as your fish is cleaned, wash it thoroughly inside and out. Then roll the fish in a strip of damp burlap and place in a wicker creel or basket. This permits ventilation and keeps the fish cool. Wash the burlap strip and creel or basket thoroughly with baking soda and water after each day's fishing.

How to bone small fish: Panfish are our most popular fish but generally small and bony. To get sweet, boneless flesh even from three—and four-inch sunnies, follow this little secret shown to me years ago by a farm cook. 1. Scale and clean thoroughly, leaving heads on. 2. Pour several inches of water in a large fry pan and bring to a boil. 3. Place fish in scalding water for one-half to one full minute according to size, then drain off water. 4. Take a dull knife and scrape meat from the bones (Figure A in our illustration). The flesh now peels readily and leaves all bones on the carcass. 5. Slice meat into thin sticks and roll in flour lightly. 6. Season with salt and pepper. 7. Fry in bacon fat and butter (not margarine) until golden brown. The resulting fish sticks taste like something out of this world. Ideal fish for this are yellow and white perch, sunnies, rock bass, crappies and all of the small saltwater fish caught around piers and breakwaters.

Boning large fish (except pickerel, pike and muskies) is best done by filleting. This eliminates all bones as well as the strong-tasting belly flesh so often left on fish. To fillet trout, salmon, crappies, perch, striped bass, porgies, sea bass, weakfish (spotted sea trout), bluefish, flounder and mackerel, you need not skin first. But all other

[*Continued on page* 161]

CASH FILING SAWS

Make from $3 to $6 an hour spare time or start a full time business with the

FOLEY SAW FILER

Here is a steady repeat CASH business you can start at home in your basement or garage, while you are working at your regular job. No experience is necessary to turn out perfect cutting saws —"the first saw I sharpened came out 100%. I think the Foley Saw Filer is a marvel of perfection," writes Clarence E. Parsons. No canvassing —every saw you sharpen will bring you new customers. You will find you can make up to $3 or $6 an hour—$20 to $30 a week in your spare time as a starter. "My spare time saw filing business has made me $952 these first ten months," says R. T. Chapman.

The new model 200 Foley Saw Filer (shown here) is the *first* and *only* machine that automatically sharpens combination (rip and crosscut) circular saws—also all hand saws, band saws and crosscut circular saws. It is easy to operate—simple adjustments—no eyestrain. Patented jointing principle evens up all irregular teeth and makes an old saw cut just like new.

This Free Book* "MONEY MAKING FACTS" *Shows How To Start

"MONEY MAKING FACTS" shows you how others have added hundreds or thousands of dollars to their incomes and how you can develop into a general repair shop that will be your own business. This is a CASH business with a small investment, no overhead, no stock of goods to carry. Mail coupon now for free book and nation-wide survey of saw sharpening charges. No salesman will call.

fish should be skinned before filleting to rid them of a strong or muddy taste. You need not scale or clean a fish that is to be both skinned and filleted.

To skin a fish: 1. With a sharp knife cut skin completely around fish just below head and pectoral fins, leaving head on. Do not cut into flesh. 2. Cut the skin down along the back on each side of the dorsal fin, clear to the tail. 3. Cut the skin down the belly on each side of the belly fins to the tail. 4. Hold fish by head and grip a corner of the skin on back next to the head with a pair of pliers. 5. Peel skin off toward the tail (Figure B). Do this on both sides. Skin will peel more easily if you scald the fish first.

To fillet a fish: this can be done with the skin on or off. If you leave the skin on you must scale the fish before filleting. This is done best with a wet fish; use a dull knife, a ten-cent scaler or a spoon. After scaling proceed as follows: 1. Cut off head. 2. Grasp dorsal fin, cut fish lengthwise along one side of fin. Use a *sharp* knife. 3. Deepen this longitudinal cut until backbone is exposed. 5. Still grasping by dorsal fin, deepen cut forward, down toward belly, until you reach rib cage. Leave that strip of flesh on rib cage. 6. Reverse blade and slice down to the tail. 7. Cut off the fillet. This final cut is indicated by the lower broken line, Figure C. 8. Repeat filleting on the other side.

The most popular recipes for cooking fish are simplicity itself and preserve all the delicious natural flavors of the fish cooked.

Broiled trout: Wipe trout with damp sponge. Season inside and out with salt and pepper. Brush with melted butter and bacon fat. Broil under hot flame till a golden brown. Serve with a sauce made as follows: melt some butter, add salt and pepper, chopped parsley and lemon juice.

Fried trout: Fry three strips of bacon in large pan. Mix equal amount of butter with bacon fat. Place trout in sizzling fat and sprinkle with pepper. No salt is needed. Fry to golden brown.

Baked trout, salmon, bass, walleye or sea bass, striped bass, bluefish and other sea fish: Clean and dress whole fish. Do not split. Wash and wipe dry with damp sponge. Stuff with well-seasoned bread

[*Continued on next page*]

THE WELDWOOD WORKSHOP CLINIC

TIPS ON WOOD FINISHING from our file of "most-asked" questions.

Q. How can I prevent hairline cracks when I paint fir plywood?

A. You can reduce the occurrence of hairline cracks, or "checking"; and get smooth, beautiful paint results on fir plywood, ponderosa pine, etc. Use Weldwood® White Firzite as a prime coat on indoor and outdoor jobs. This penetrating resin-sealer impregnates alternating soft and hard growths, wood takes paint evenly, "wild" grain does not show through.

Q. How can I avoid yellowing when I finish interior wood "natural"?

A. To get beautiful, soft-luster, natural wood finishes that won't yellow or darken with age, use new, improved Weldwood Satinlac. Seals as well as finishes, does not build up a "plate-glass" shine. Clear and colorless, flows on evenly, and just two coats bring out—don't "mask"—the wood's own beauty.

Send your questions on wood finishing, gluing, and working with plywood and prefinished wood paneling to: The Weldwood Workshop Clinic, United States Plywood, 55 W. 44th Street, New York 36, N. Y.

WELDWOOD WOOD FINISHES

stuffing (you can buy this at supermarkets). Close opening with toothpicks or sew up with thread. Slit three or four gashes in skin but not flesh, in side of fish. Fill gashes with melted bacon fat. Place pinch of thyme or marjoram, one minced onion, three tablespoons of minced parsley and two tablespoons of salt pork fat in pan. Place fish on pan and bake at 350° F. Time: 15 minutes per pound or till fish flakes easily with fork.

Clean, bone and cook your fish according to these suggestions and you'll learn that the cooking and eating can be as much fun as the catching.

Good luck—and *bon appétit.* •

Batteries

[*Continued from page* 81]

here's a quick rundown on new battery-powered gadgets:

A weather gauge that gives wind speed and direction. Powered megaphone. Storm-warner that sounds an alarm at the approach of hurricane or wind storm. Floating flashlight. Powered Christmas tree. Battery-operated hand switch for opening garage doors.

A fire-maker for outdoor barbecues. Lighted bathroom scale. Flashlight-size vacuum cleaner. Hand-held electric fan. Battery-operated typewriter eraser. Manicure set. Battery-powered wristwatch and battery-*lighted* wristwatch. Lighted screwdriver. Movie camera and projector. Kitchen mixer. Map reader.

The list of battery-powered toys is as long as your arm (providing your sleeve-length isn't over 37"). The Toy Guidance Council recommends battery-powered electric trains, a machine shop and factory, sewing machine, toy vault, tanks, planes, cars, guns, missiles and more mechanical animals than you'd dream possible.

Latest product to hit the market are battery-powered model planes. The Japanese and Germans are first in this field with tiny motors working off two dry cells—the whole powerplant so light that it can be carried aloft by a flying model. (MI's Home-Shop-Crafts Section will soon publish a how-to-make project on one of these fascinating planes.)

All the items mentioned above are powered by the popular dry cell. There

are, of course, many other kinds of batteries developed for specific jobs. There are nickel-cadmium (rechargeable) batteries, air cell batteries, mercury batteries, cathodic envelope batteries—and Allie Reynolds-Yogi Berra, one of the greatest batteries of all times.

In the last few years, because of the unique demands of missiles, rockets and space vehicles, battery research has taken some unusual directions. The big battery-makers, including Bright Star, Burgess, Eveready, Ray-O-Vac and others are all working on batteries for tomorrow, including. . .

Automobile power batteries: The return of the electric automobile (Oct. '59 MI) depends a great deal on developing a better battery of high power and long range. Two new types are currently being tested: the Yardney Electric Corp. silver-cadmium battery used to power a remodeled Dyna-Panhard (150 miles on one charge) and the tubular plate Exide Ironclad battery used to power electric delivery trucks in the Philadelphia area.

Fuel cells: Oxygen and nitrogen are fed into the cells from outside tanks. The gases react in an electrolyte generating a direct current which passes through a controller to a standard motor. Allis-Chalmers has demonstrated a fuel cell-powered tractor and sees a big future for the fuel cell as a power supply for cars, trucks and even space vehicles.

Solar cells: Silicon wafers convert light directly into electricity. They have been used to power radios, model cars and boats, telephone systems and electronic devices. Solar cells will have a wide application in space technology, particularly in transistorized radio and TV satellites.

Atomic batteries: Button-size atomic batteries using a radioactive isotope have been developed that produce low voltages over a long period. Other types of atomic power packages use the heat of a small atomic pile to spin a turbine which generates electricity.

These are just a few of the directions in which science is moving in its search for smaller, more powerful, more efficient electric power packages. With our space program as a spur, it seems likely that the next decade will see portable devices with a power output never dreamed possible. •

Improve Your Bowling

[*Continued from page 71*]

of the alley in line with the headpin. As you move into your delivery, you just naturally release the ball on the right side of the alley. If you're a lefty, line yourself up with your right foot in the center of the alley. Once you take your stance, always move straight ahead toward the foul line.

To help you develop a consistent stance, most of the newer alleys have a system of inlaid dots, called range-finders. The large center dot indicates the exact center of the alley. If it's an older house, without dots, do a little plank counting to find your spot.

I use a five-step delivery but I don't recommend it for everybody. A four-step is used by most bowlers. In this maneuver, the first step is with the right foot. The ball is pushed straight away from the body and allowed to start falling to the side. The first step should not be a long one. Its primary job is to get your body in motion toward the foul line. The second step with the left foot is slightly longer. The ball passes the knees and begins to swing to the rear.

The ball reaches the height of the backswing on the third step with the right foot. The left hand is extended forward for balance. On this backswing, be careful that the ball never rises above shoulder level.

The fourth step, on the left foot—the longest in the delivery—brings you up to the foul line in a graceful glide. As you slide to the foul line and release the ball, follow through with your arm.

This last step is the most important in the game. It's the explosion point. As you slide—and some slide a good distance, others hardly at all—bend the left knee, keeping your shoulders, parallel to the alley. As you do this extend the right foot to the rear, as you slide on the left. It balances the body and also acts as a brake for the slide.

What you do with your arm after releasing the ball can make a big difference in your average. The most natural and easy follow-through is simply letting the

ARC WELDING WILL PAY YOU big profits

COMES COMPLETE—ready to weld. This potent package of performance welds, cuts, burns holes, hardsurfaces, solders, brazes and heats metal. It's an ideal all-around shop welder. The Power/Weld gives you DC for welding AND FURNISHES AC POWER simultaneously. It can also be used to provide emergency AC power. These two welders are bound to help you earn big profits—write for more details today!

HOBART BROS. CO., BOX SM-30, Troy, Ohio, Phone FE 21223

LOW COST combination welder and power unit, welds or runs tools, lights, motors. Easy to use . . . handles all kinds of work

arm come forward and up to complete the pendulum. The hand should end up pointing at the pin at which you're aiming.

What do you look at when you deliver your ball—the pins or the alley? It's just a matter of deciding which one works best for you. Both spot and pin bowling are based on an imaginary line from the 1-3 pocket to the foul line—a line the ball should follow.

For pin bowling, glance at the pins to fix the line in your mind and, as you start your delivery, keep your eyes down the alley on the 1-3 pocket.

For spot bowling, glance at the pins when you take your stance. Fix in mind the spot where the imaginary line crosses the foul line. That's where to look all during your delivery—the spot on the alley just beyond the foul line where you want the ball to be put down. A true spot bowler never looks at the pins during his delivery.

Roll the ball—don't throw it. The ball should land not more than six to 18 inches beyond the foul line after it leaves your hand.

Don't worry too much about speed. A fast ball is difficult to roll accurately and even if you hit the pocket consistently, a ball that is too fast usually chops right through, leaving you those score-killing splits—pins on the opposite sides of the alley—to shoot at.

The three types of desired rolls are the straight, hook and curve. I suggest you begin with a straight ball, which is delivered with the thumb on top and the fingers underneath the ball. You roll it off your palm. For a straight-ball grip think in terms of a clock, with your thumb at about 12 o'clock.

Whatever you roll, don't get strike-happy. (A strike is when you knock down all the pins with your first roll in each frame. There are ten frames in a bowling game just as there are nine innings in a baseball game.) Many bowlers, if they don't get a strike, tend to relax and not concentrate on the spares. That's wrong. A spare gives you ten pins, plus whatever you knock down with the next ball. The easiest way to build your average is to develop accuracy on spares.

Now it's up to you. Good luck! •

Escape Pods

[*Continued from page* 61]

aircraft this problem of escape in the air is still as far from solution as the day the first passenger airliner took off.

From time to time individual parachutes have been considered for airliners, but always rejected.

The objections are sensible up to a point but show a limited outlook. Getting 100 or more passengers into parachute harness in a few seconds is extremely difficult. Some passengers would probably balk at jumping. Lastly, the parachute itself can be dangerous for an untrained user.

In our opinion there *is* a way out of this dilemma. MI proposes large, twin parachute pods, each capable of carrying half a plane's passenger complement, as an aerial lifesaver concept to be pondered by both airlines and plane manufacturers.

From the outside our "safety plane" looks much like other airliners. Inside one can see where the cabin is divided into detachable compartments. There is a bulkhead with an airtight hatch at the trailing edge of the wings, to seal off the after pod in an accident. The forward pod has two bulkheads, one at each end. The aft bulkhead is at the leading edge of the wings and the forward one is just aft the cockpit. The fixed section amidships holds the galley, carry-on luggage rack and washroom.

The overhead of each pod, packed with five huge cargo parachutes, fits into the fuselage. The space between the pod's deck and belly contains barrel-size rubber bags which are attached to the pod. When inflated with CO_2 cartridges, these absorb two-thirds of the landing shock. In water landings the bags turn the pod into an unsinkable boat. Two heavy ballast weights attached by cables to the underside of the deck can be dropped through the skin to dangle several feet deep and improve stability.

After ejection, a pod can maintain pressurization, supply oxygen and protect its occupants from cold. An automatic transmitter sends out distress calls. If separation is at high speed and altitude the pod is allowed to fall free until it drops to a speed (175 mph) and altitude (about 10,000 ft.) where the main parachutes can be opened and the air is thick enough to

maintain life. The blunt nose, besides creating drag to cut speed, actually helps stabilize the capsule and make it fall straight and true. A small drag chute trailing out behind also acts as a brake and keeps the nose pointed into the wind.

Let's see how our parachute pod works:

Before take-off, passengers are given instructions in what to do in case of an emergency in flight and familiarized with the necessary bell and buzzer signals. It is a drill not unlike those aboard ocean liners. In case of ejection, standard procedure calls for the co-pilot to bail out with one capsule, the flight engineer with the other. If they are incapacitated, the hostesses take over.

After a mid-air mishap the plane captain is faced with two emergency steps. 1) He presses a buzzer to alert passengers, who quickly fasten seat belts, buckle on shoulder straps and press their foreheads against shock absorbers that prevent the head from snapping forward. 2) The captain decides whether a safe landing is possible. If not, the crewmen close the bulkhead doors and take their positions in the pods. When they are ready the pilot maneuvers into the best possible position and rings a bell signal. The co-pilot, in the forward pod, presses a button and the capsule is blown clear by eject cartridges. The after pod follows a moment later. With both pods away, the pilot escapes in an individual parachute.

Inside the capsule, gauges tell the co-pilot his altitude and speed. If ejection was at 20,000 feet, he probably will be able to open the main chutes at 10,000 feet. Passengers are thrown violently against their harnesses by the opening shock but the danger of injury is not high. The co-pilot begins a count-down to estimated landing time, the shock-absorbers are inflated and the pod pancakes into the ground (or water).

Parachute pods couldn't save all the people involved in mid-air accidents. If damaged itself, the pod might not function. Its usefulness at low altitudes would be doubtful. But pods would cut down the number of air fatalities and they might save your life or mine, or that of some member of your family or mine.

Airline passengers must be given a second chance! •

ONLY ONE PLIER GIVES YOU BOTH

1. Reinforcing Rib for ADDED STRENGTH WHERE YOU NEED IT!

2. Machined Undercut Channels... SMOOTH-WORKING, CAN'T SLIP UNDER ANY LOAD!

The Oldsmobile

[*Continued from page* 94]

gunwales with heavy luggage, two dogs and my wife. By making his left turn, the other car had completely blocked the two lanes of highway. He was traveling at less than 15 miles an hour, not more than 50 feet in front of me. Instantly I glanced to the left and saw a four-foot drainage ditch which would have ripped my car apart. If I plowed straight ahead into this jerk, I undoubtedly would kill him and his passenger.

I had no choice. I whipped the wheel hard to the right, which threw me into a left broadside. If I had let it stay in this slide more than a fraction of a second, it would have rolled me over. The moment I felt the right wheels lifting, I cut hard left, which momentarily straightened me. Then I cut to the right again and just eased by the tail of the other car with what couldn't have been more than a thousandth of an inch to spare.

Jim McMichael, who was right behind me in another car, witnessed the whole thing and felt sure the big car I was driving was going to roll. It didn't. However, if my suspension hadn't been the best made in America, you wouldn't be reading this piece. Any sloppiness of suspension in a situation like this and the guy in the other car would have been deader than last week's smelt. I doubt if my wife and I would have been in too good shape, either. We and that stupid little man in North Carolina are alive today thanks to real top-flight suspension on my car, and nothing else. I own three other cars besides the one I was driving and I know I wouldn't have had a prayer in any of the other three.

So much for suspension which the Olds, in my opinion, sadly lacks. The rest of the car is pretty plush, from its nice sponge-rubber headlining to its really comfortable seats. Incidentally, due to David McDonald and his steel-working pixies, I got our test car in a rather unorthodox way. Quite often when we need cars for testing we borrow them from a zone sales office or factory. However, with the steel boys bickering, there were no Oldsmobiles available so I *rented* this hack! Which means it was as strictly stock as feathers on an ostrich's butt. I'm sure the people

who rented me the car were unaware of my purpose or they might possibly have had reservations, as car-testing is not one of the things their clients usually go in for.

The Olds dashboard sports an amazing array of idiot lights instead of instruments. They read GEN—OIL—HOT—COLD, which is like getting a weather report which merely states "We will have some." The speedometer is a twisting worm that goes from left to right and changes color from green to yellow to red. The headroom is far from exceptional.

The power plant in the Super 88 is a big 394-cubic-inch mill which (they claim) develops 315 horsepower. The smaller Dynamic 88, which we didn't test, has a V8 that develops 240 horsepower. This kite is built on a 123-inch wheelbase with an overall length of 217.6 inches and a width of 80.6. This is a big car, selling right in the middle of the medium-price field where competition is hotter than a tabasco taster's kiss. On the Super 88 we tested, a good old manual transmission is standard equipment but our job, being a deluxe puff, was equipped with Hydramatic.

The air conditioning was pretty fair and seemed to do a good job in the front seat. You may recall we tested the 1959 Olds 98 over hundreds of miles of snow and ice and found the traction excellent. We also complained about the chrome strip along the top of the door that scooped water into your lap when it rained and cut into your arm when you indulged in a bit of outside arm driving. This strip has happily been eliminated for 1960 and the car still has top traction.

In summing up, six or seven years ago the Olds 88 was the hottest car, performance-wise, in the country. It won more stock car races than any other make in those days. However, Olds leadership in this department went over the fence with the introduction of a number of hotter cars such as the Pontiac, the first V8 Chevy and some Ford products. Despite this, Olds still scores on the tracks occasionally when in the capable hands of such men as Lee Petty. Oldsmobiles are racing rarities these days, whereas six years ago they constituted more than half the field in most events. These cars are comfortable, fairly well-appointed and excellent from the point of endurance and reliability. •

Observing The Planets

[*Continued from page* 154]

Thus, by comparing the relative brightness of various features through the filters of a tri-color set, their true coloring can be ascertained by a process of elimination. This experiment will reveal delicate hues in the seeming colorless moon. It will be noticed that some of the clear dark areas in the "seas" appear only through a filter set.

A diamond-shaped region below the bright crater Aristarchus is much sharper and darker in the ultra-violet than in the infrared. This is one of the most conspicuously colored lunar features. When the moon is clear and high, the mustard-yellow hue of the "diamond" is clearly visible with the eye unaided by filters—and yet it sometimes looks pale through the blue and violet filters as well. This would be quite impossible without the intervention of some sort of atmosphere.

Apart from allowing us to get at the real colorings of planetary features, a red filter is useful for its haze-penetrating power. In poor seeing the clearness and steadiness of the image can be improved by a red filter. Moreover, no lens, however perfect, can focus the light of several colors at one point. So, a monochromatic filter, and to some extent a tri-color filter, may improve optical definition.

The true separation of different colors requires monochromatic filters, which allow the light to pass only a "simple" pure color. Monochromatic filters can be very useful both for color study and for improving optical definition. By the same token they severely cut down the amount of light reaching the eye and cannot be successfully employed for faint objects, or with high powers and small apertures.

Filters can disclose in a planetary disk much of interest that can be neither seen nor suspected without them. Since the visual use of filters has not properly come into its own there is still a good deal that can be discovered or confined in this field with quite modest means. Look at the belts of Jupiter and Saturn; see how they are emphasized by a green filter. •

3" ASTRONOMICAL REFLECTING TELESCOPE

60 to 180 Power—Famous Mt. Palomar Type! An Unusual Buy!

Assembled—Ready to use! You'll see the Rings of Saturn, the fascinating planet Mars, huge craters on the Moon, Star Clusters, Moons of Jupiter in detail. Galaxies! Equatorial mount with lock on both axes. Aluminized and overcoated 3" diameter high-speed f/10 mirror. Telescope comes equipped with a 60X eyepiece and a mounted Barlow Lens, giving you 60 to 180 power. Low-cost accessory eyepiece, available for higher powers. An essential, is also included. Sturdy, hardwood, portable tripod. FREE Optical Finder Telescope, always so useful, is also included. Sturdy, hardwood, portable tripod. FREE with Scope:—Valuable STAR CHART plus 272 page "HANDBOOK OF HEAVENS" plus "HOW TO USE YOUR TELESCOPE" BOOK.

Stock No. 85,050-B .....$29.95 postpaid

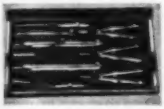
4½" Reflecting Telescope—up to 255 Power

Stock No. 85,006-B .....$74.50 F.O.B. Barrington, N. J.

KNOW THE TRUTH ABOUT POWER Telescope experts will confirm that an Astronomical Telescope will only give you practical powers to about 50 or 60 times per inch of objective diameter—powers above this only produce empty magnification—make viewing dim, difficult and unsatisfactory.

CLOSE OUT! MECHANICAL DRAWING SET

Regular Price $18.00, Our Price Only $8.00 Ppd.



American manufacturer couldn't compete with foreign imports—thus you get a terrific bargain, even far below import prices. 10 handsome pieces in velvet-lined case. Nickel plated brass—precision American-made. We guarantee you'll be satisfied or money refunded.

EDMUND SCIENTIFIC CO. BARRINGTON, NEW JERSEY

FOR REAL **JOB SECURITY** —GET AN **I.C.S.** DIPLOMA

"You can stop worrying, Jane. My job's secure now! And here's the insurance policy to prove it—my I.C.S. diploma!"

This feeling of security is probably typical of every I.C.S. graduate. Because—as the job situation gets tighter, the man with I.C.S. training has the advantage.

Why? Your I.C.S. diploma tells your present employer three important things: (1) You want to make the most of your present job. (2) You have the training you need for advancement. (3) You look for better ways of doing things *on your own.*

What you do about your future is up to *you*. Do nothing and stay at your present job at the same old pay. Or earn an I.C.S. diploma in your spare time for *security, promotions, more pay!* Your first step is to mark the course that interests you in the coupon below, and mail it to us.

Three *Free* Books

We'll send you three interesting books. The first, "How to Succeed," is a gold mine of helpful tips. Points out many small things in your personality and behavior that can make the difference between success and failure. The second tells about the opportunities in the field of your choice. The third is a sample lesson (Math).

Costs *pennies* a day

Many an I.C.S. student has made up the cost of his course in one month with the salary increase his I.C.S. training earned for him. By studying at home in your spare time, you pay yourself many times an hour more than you're now making. (One student reports—"My I.C.S. course was worth $95 an hour to me.")

The security of your present job—or success in finding the new job you've always wanted—is in *your* hands. Move ahead with I. C. S. training while others stay behind on the routine, small-pay jobs.

Remember, your first step to security is to mail this coupon. Take a few minutes and do it *now*. If you put it off, it can cost you your future.

For Real Job Security—Get an I. C. S. Diploma! I. C. S., Scranton 15, Penna.

5 reasons why ACCOUNTING offers you MORE MONEY and SUCCESS

REASON #1. If you were an expert accountant right now, chances are you would find yourself in one of the best paid fields of business.

REASON #2. The demand for accountants is great—everywhere. All businesses must have trained accountants to cope with ever-growing requirements. It's a field offering wide opportunity—always—to the man who knows.

REASON #3. You can fit into any business, anywhere in the country—because accounting principles are universal. Think what this means in terms of security and independence!

REASON #4. Accounting is open to all. Any man or woman of good intelligence, who enjoys figure work and is willing to follow LaSalle's systematic "problem method" plan, can rapidly qualify for a highly profitable, enjoyable lifetime career...and he doesn't have to finish his training before beginning to "cash in."

SEND FOR *FREE* SAMPLE LESSON

REASON #5. Without losing a day from your present work, you can prepare in spare hours at home, at low cost, under LaSalle's step-by-step "Problem Method" of "learning by doing." This famous plan accounts for LaSalle's remarkable record of having trained one out of every 13 of all Certified Public Accountants in the U. S. . . . and of having put many thousands of others into high-paying careers.

Send today for Free Sample Lesson and "Opportunities in Accounting." Learn about the several great fields of opportunity . . . and LaSalle's time-tested plan for helping men and women to rapid advancement, higher income and greater prestige. The card below is a coupon-postcard. No postage or envelope required. Simply cut out and mail with your name and address filled in. By return mail you will receive full information and free sample lesson without obligation.

The Oldsmobile

[*Continued from page* 94]

gunwales with heavy luggage, two dog and my wife. By making his left turn the other car had completely blocked the two lanes of highway. He was travelling at less than 15 miles an hour, not more than 50 feet in front of me. Instantly I glanced to the left and saw a four-foot drainage ditch which would have ripped my car apart. If I plowed straight ahead into the jerk, I undoubtedly would kill him and his passenger.

I had no choice. I whipped the wheel hard to the right, which threw me into a left broadside. If I had let it stay in this slide more than a fraction of a second, it would have rolled me over. The moment I felt the right wheels lifting, I cut back left, which momentarily straightened me. Then I cut to the right again and just eased by the tail of the other car with what couldn't have been more than a thousandth of an inch to spare.

Jim McMichael, who was right behind me in another car, witnessed the whole thing and felt sure the big car I was driving was going to roll. It didn't. However, if my suspension hadn't been the best made in America, you wouldn't be reading this piece. Any sloppiness of suspension in a situation like this and the guy in the other car would have been deader than last week's smelt. I doubt if my wife and I would have been in too good shape, either. We and that stupid little man in North Carolina are alive today thanks to real top flight suspension on my car, and nothing else. I own three other cars besides the one I was driving and I know I wouldn't have had a prayer in any of the other three.

So much for suspension which the Olds, in my opinion, sadly lacks. The rest of the car is pretty plush, from its nice sponge rubber headlining to its really comfortable seats. Incidentally, due to David McDonald and his steel-working pixies, I got our test car in a rather unorthodox way. Quite often when we need cars for testing we borrow them from a zone sales office or factory. However, with the steel boys bickering, there were no Oldsmobiles available so I *rented* this hack! Which means it was as strictly stock as feathers on an ostrich's butt. I'm sure the people

o rented me the car were unaware of purpose or they might possibly have reservations, as car-testing is not one the things their clients usually go in for. The Olds dashboard sports an amazing ray of idiot lights instead of instruments. ey read GEN—OIL—HOT—COLD, ich is like getting a weather report ich merely states "We will have some." e speedometer is a twisting worm that s from left to right and changes color m green to yellow to red. The head-m is far from exceptional.

The power plant in the Super 88 is a big 4-cubic-inch mill which (they claim) de-lops 315 horsepower. The smaller Dy-mic 88, which we didn't test, has a V8 t develops 240 horsepower. This kite is lt on a 123-inch wheelbase with an over-l length of 217.6 inches and a width of 6. This is a big car, selling right in the ddle of the medium-price field where mpetition is hotter than a tabasco taster's s. On the Super 88 we tested, a good old nual transmission is standard equip-nt but our job, being a deluxe puff, was uipped with Hydramatic.

The air conditioning was pretty fair and emed to do a good job in the front seat. u may recall we tested the 1959 Olds 98 er hundreds of miles of snow and ice and nd the traction excellent. We also com-ained about the chrome strip along the of the door that scooped water into ur lap when it rained and cut into your n when you indulged in a bit of outside n driving. This strip has happily been minated for 1960 and the car still has top ction.

In summing up, six or seven years ago e Olds 88 was the hottest car, perform-ce-wise, in the country. It won more ck car races than any other make in se days. However, Olds leadership in s department went over the fence with e introduction of a number of hotter cars ch as the Pontiac, the first V8 Chevy and e Ford products. Despite this, Olds still res on the tracks occasionally when in e capable hands of such men as Lee ty. Oldsmobiles are racing rarities these ys, whereas six years ago they consti-ed more than half the field in most nts. These cars are comfortable, fairly ll-appointed and excellent from the nt of endurance and reliability. •

Telescope Kits Direct from Manufacturer

Many 'Do-it-Yourself' projects for the amateur: build telescopes, projectors, microscopes. Mirrors and parts. Many other optical kits.

Hampton, P. O. Box 772, Sparta, New Jersey

Observing The Planets

[*Continued from page* 154]

Thus, by comparing the relative bright-ness of various features through the filters of a tri-color set, their true coloring can be ascertained by a process of elimination. This experiment will reveal delicate hues in the seeming colorless moon. It will be noticed that some of the clear dark areas in the "seas" appear only through a filter set.

A diamond-shaped region below the bright crater Aristarchus is much sharper and darker in the ultra-violet than in the infrared. This is one of the most con-spicuously colored lunar features. When the moon is clear and high, the mustard yellow hue of the "diamond" is clearly visible with the eye unaided by filters—and yet it sometimes looks pale through the blue and violet filters as well. This would be quite impossible without the in-tervention of some sort of atmosphere.

Apart from allowing us to get at the real colorings of planetary features, a red filter is useful for its haze-penetrating power. In poor seeing the clearness and stead-ness of the image can be improved by a red filter. Moreover, no lens, however perfect, can focus the light of several colors at one point. So, a monochromatic filter and to some extent a tri-color filter, may improve optical definition.

The true separation of different colors requires monochromatic filters, which al-low the light to pass only a "simple" pure color. Monochromatic filters can be very useful both for color study and for im-proving optical definition. By the same token they severely cut down the amount of light reaching the eye and cannot be successfully employed for faint objects, or with high powers and small apertures.

Filters can disclose in a planetary disc much of interest that can be neither seen nor suspected without them. Since the visual use of filters has not properly come into its own there is still a good deal that can be discovered or confined in this field with quite modest means. Look at the belts of Jupiter and Saturn; see how they are emphasized by a green filter. •

GET READY FOR THE SPACE and SCIENCE ERA! SEE SATELLITES, MOON ROCKETS CLOSE-UP

AMAZING OPTICAL BUYS

...and OTHER SCIENTIFIC BARGAINS

See the Stars, Moon, Planets Close Up!

ASTRONOMICAL REFLECTING TELESCOPE

Up to 180 Power—Famous Mt. Palomar Type! An Unusual Buy!

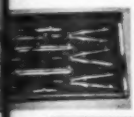
Assembled—Ready to use! You'll see the Rings of Saturn, the fascinating planet Mars, huge craters on the Moon, Star Clusters, Moons of Jupiter in detail. Galaxies! Equatorial mount with lock on both axes. Aluminized and overcoated 3" diameter high-speed f/10 mirror. Telescope comes equipped with a 60X eyepiece and a mounted Barlow Lens, giving you 60 to 180 power. Low-cost accessory eyepieces, available for higher powers. An Optical Finder Telescope, always so useful, is also included. Sturdy, hardwood, portable tripod. FREE Star Scope:—Valuable **STAR CHART** plus 272 page **"HANDBOOK OF HEAVENS"** plus **"HOW TO USE YOUR TELESCOPE" BOOK.**
Stock No. 85,050-B .....**$29.95 postpaid**

4½" Reflecting Telescope—up to 255 Power
Stock No. 85,006-B .....**$74.50 F.O.B. Barrington, N. J.**

KNOW THE TRUTH ABOUT POWER Telescope experts will confirm that an Astronomical Telescope will only give you practical powers to about 50 or 60 times per inch of objective diameter—powers above this only produce empty magnification—make viewing dim, difficult and unsatisfactory.

CLOSE OUT! MECHANICAL DRAWING SET

Regular Price $18.00, Our Price Only $8.00 Ppd.



American manufacturer couldn't compete with foreign imports—thus you get a terrific bargain, even far below import prices. 10 handsome pieces in velvet-lined case. Nickel plated brass—precision American-made. We guarantee you'll be satisfied or money refunded.
Stock No. 50,200-B ....**$8.00 Postpaid**

Beginner's Lens Kits! Fun for adults! Fun for children! Kits include plainly written, illustrated booklet showing how you can build lots of optical items.
Stock No. 2-B—10 Lenses .....**$ 1.00 Postpaid**

TERRIFIC BUY! STEREO-MICROSCOPE!

American Made—Save Over 50%

Other American made Stereos cost $250.00 to $600.00 and more! Now—save well over 50%! **Up to 3" Working Distance—Wide 3 Dimensional Field**—Used in production, in research, or at home; for inspections, examinations, counting, checking, assembling. 2 sets of objectives on rotating turret. Standard pair of wide field 10X Kellner Eyepieces give you 23 power and 40 power clear, sharp, erect image. Helical rack and pinion focusing. Interpupillary distance adjustable. SO GOOD, WE'LL SHIP ON 10-DAY FREE TRIAL.
Stock No. 85,056-B—full price, $99.50 f.o.b. Barrington, N. J.

SPECIAL! SPECIAL!

Complete Optical Kit! Build a 6" Reflecting Telescope! (Described in Mech. Illus. February & March 1958 issues)
Consists of plate glass mirror blank, 2 finely ground and polished lenses for 1½" F.L. eyepiece; first surface diagonal mirror; magnifying lens; 8 abrasives; pitch.
Stock No. 70,154-B.....**$9.00 Postpaid**
Stock No. 70,004-B . . . **Deluxe Kit** with Pyrex mirror blank—1" eyepiece .....**$11.95 Postpaid**

FISH' WITH A MAGNET

...on Treasure Hunting On The Bottom

Great idea! Fascinating fun and sometimes tremendously profitable! Tie a line to our 5-lb. Magnet—toss it overboard in bay, river, lake or ocean. Troll it along the bottom—your "treasure" haul can be outboard motors, anchors, fishing tackle, all kinds of metal valuables. 5-lb. Magnet is war surplus—Alnico V Type—a terrific bargain. Lifts over 125 lbs. on land—much greater weights under water. Order now and try this new sport.
Stock No. 70,183-B. 5-lb. Magnet .....**$8.50 Postpaid**
Stock No. 85,068-B. 15¾ lb. size .....**$22.50 F.O.B.** Barrington, N. J.
Lifting weight 22 lbs.

NEW BINOCULAR-TO-CAMERA HOLDER

For Exciting Telephoto Pictures—Will Fit Any Camera

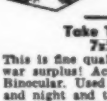
Bring distant objects 7 times nearer with a 35mm camera. 7x50 binocular and our NEW BINOCULAR-TO-CAMERA HOLDER. Ideal for long-range shots of wild life, planes, ships, people, etc. Camera and binoculars attach easily. Use any binocular or monocular—any camera, still or movie. Take color or black and white. Full directions for taking telephotos.
Stock No. 70,223-B ....**$11.50 Postpaid**

Terrific Buy! American Made!

OPAQUE PROJECTOR

Projects illustrations up to 3" x 3¼" and enlarges them to 4 ft. wide. No film or negatives needed. Projects charts, diagrams, pictures, photos, lettering in full color or black-and-white. Operates on 115 volt, A.C. current. 6-ft. extension cord and plug included. Operates on 60 watt bulb, not included. Size 12" x 8" x 4½" wide. Weight 1 lb., 2 oz. Plastic case with built-in handle.
Stock No. 70,199-B .....**$7.95 Postpaid**

BUILD A SOLAR ENERGY FURNACE



Easy! Inexpensive! We furnish instructions. This sun powered furnace will generate terrific heat—2000° to 3000°. Build with your scrap wood and our Fresnel Lens—14¾" diameter . . . f.1.14". See April 1956 Mech. Illus. Page 153.
Stock No. 70,130-B ...**Fresnel Lens $6.00 Pstpd.**

Take Telephoto Shots Thru 7x50 MONOCULAR

This is fine quality, American made instrument—war surplus! Actually ½ of U. S. Govt. 7 x 50 Binocular. Used for general observation both day and night and to take fascinating telephoto shots with your camera. Brand new, $95 value. Due to Japanese competition we close these out at a bargain price. Directions and mounting hints included.
Stock No. 50,003-B .....**$15.00 Postpaid**

War Surplus American-Made 7x50 Binoculars

Big savings! Brand new! Crystal clear viewing—7 power. Every optical element is coated. An excellent night glass—the size recommended for satellite viewing. Individual eye focus. Exit pupil 7mm. Approx. field at 1,000 yds. is 376 ft. Carrying case included. American 7 x 50's normally cost $195. Our was surplus price saves you real money.
Stock No. 1333-B .....**only $89.00 pstpd.** (Tax included)

NOTICE: EDMUND IS NOW HEADQUARTERS FOR MATH LEARNING AND TEACHING AIDS! SEE DOZENS OF OFFERINGS IN OUR FREE CATALOG "B."

NEW! CIRCULAR SLIDE RULE!

Pocket Size—Fast—Easy to Use!

Be a Math Whiz! New Circular Slide Rule multiplies, divides, figures fractions, percentages, squares, cubes, roots, proportions, circumferences, areas, retail prices, fuel consumption. Eliminates the confusions of ordinary slide-rules. Priced far lower. Faster, easier to learn and use. Constructed of 2 aluminum discs with plastic indicator. 3½" diameter. Directions included.
Stock No. 30,336-B .....**$4.95 Postpaid**

24" GOOSENECK MAGNIFIER WITH CLAMP-ON BASE

A 3" diameter magnifier mounted on a 24" long flexible gooseneck. Clamp it on machines, desks, workbenches, etc. Clamp opens to 1 13/16".
Stock No. 70,235-B .....**$8.95 Postpaid**

FREE CATALOG-B

128 Pages! Over 1000 Bargains!

America's No. 1 source of supply for science experimenters, hobbyists. Complete line of Astronomical Telescope parts and assembled Telescopes. Also huge selection of lenses, prisms, war surplus optical instruments, parts and accessories. Telescopes, microscopes, satellite scopes, binoculars, infrared sniperscopes. Math learning and teaching aids.

EDMUND SCIENTIFIC CO. BARRINGTON, NEW JERSEY

FOR REAL **JOB SECURITY** —GET AN **I.C.S.** DIPLOMA

"You can stop worrying, Jane. My job's secure now! And here's the insurance policy to prove it—my I.C.S. diploma!"

This feeling of security is probably typical of every I.C.S. graduate. Because—as the job situation gets tighter, the man with I.C.S. training has the advantage.

Why? Your I.C.S. diploma tells your present employer three important things: (1) You want to make the most of your present job. (2) You have the training you need for advancement. (3) You look for better ways of doing things *on your own.*

What you do about your future is up to *you.* Do nothing and stay at your present job at the same old pay. Or earn an I.C.S. diploma in your spare time for *security, promotions, more pay!* Your first step is to mark the course that interests you in the coupon below, and mail it to us.

Three *Free* Books

We'll send you three interesting books. The first, "How to Succeed," is a gold mine of helpful tips. Points out many small things in your personality and behavior that can make the difference between success and failure. The second tells about the opportunities in the field of your choice. The third is a sample lesson (Math).

Costs *pennies* a day

Many an I.C.S. student has [illegible] up the cost of his course in [illegible] month with the salary increase [illegible] I.C.S. training earned for him. [illegible] studying at home in your [illegible] time, you pay yourself many [illegible] an hour more than you're [illegible] making. (One student reports: "My I.C.S. course was worth [illegible] an hour to me.")

The security of your [illegible]ent job—or success in [illegible] the new job you've alw[illegible] wanted—is in *your* hands. [illegible] ahead with I. C. S. trai[illegible] while others stay behind on [illegible] routine, small-pay jobs.

Remember, your first [illegible] to security is to mail th[illegible] coupon. Take a few minu[illegible] and do it *now.* If you p[illegible] it off, it can cost you you[illegible] future.

For Real Job Security—Get an I. C. S. Diploma! I. C. S., Scranton 15, Penna.

Accredited Member, National Home Study [illegible]
